

The Department of Interactive Games and Media and the RIT Innovation Center proudly present

FREE SOFTWARE

in ETHICS and in PRACTICE

by **RICHARD STALLMAN**

Richard Stallman will speak about the goals and philosophy of the Free Software Movement, and the status and history of the GNU operating system, which in combination with the kernel Linux is now used by tens of millions of users world-wide.

Richard Stallman launched the development of the GNU operating system (www.gnu.org) in 1984. GNU is free software: everyone has the freedom to copy it and redistribute it, as well as to make changes either large or small.

The GNU/L (GNU operating system with Linux added), is used on tens of millions of computers today.

Stallman has received the ACM Grace Hopper Award, a MacArthur Foundation fellowship, the Electronic Frontier Foundation's Pioneer award, and the the Takeda Award for Social/Economic Betterment, as well as several honorary doctorates.
