

Colloquium

Wednesday October 4, 2006

12pm Room 08-2130

**"A DEMONSTRATION AND DISCUSSION OF
MACROMEDIA'S CAPTIVATE SOFTWARE FOR
PRODUCING ANIMATED ONLINE EXAMPLES
FOR CALCULUS"**

Tim Goodwill

School of Mathematical Sciences, RIT

I will demonstrate the Macromedia software Captivate which allows you to turn simple screen-captures into a multimedia flash animation with interactive features. The software's principal use at RIT has been to produce tutorials for use with MyCourses and other software. I have used Captivate to produce animated examples in Calculus for the distance learning sections. I will demonstrate some of these animations, show how easy the software is to use, and invite a discussion on improving the utility of the software and the animations for our classes.
