It’s easy as...

3D Laser Scanning Technology

This 3D Laser Scanner can digitally capture ANY object. The software then converts the captured data into polygons arranged as a perfect solid model rendition. The solid model can be used by Mastercam to create the tool paths for the CNC machine.

Desktop 3D Laser Scanner

This scanner captures objects in full color 3D using multi-laser technology. The data can be exported to be used in a variety of software such as CADing software, design software, 3D animation software, and math modeling software.
