RIT In Brief .................. Inside back cover

The College of Science’s confocal laser scanning microscope creates high-resolution images used by microbiologists, materials scientists, and other researchers.
Scientists and mathematicians will continue to challenge accepted truths, which will lead to discoveries we can’t even imagine today. If you want to make a difference in the world, RIT can help you realize your dreams.

The College of Science plays a central role in contributing to the mission of RIT. We are the center of math and science education at the university and we offer a rich portfolio of undergraduate and graduate programs, including three doctoral programs.

The college is known nationally and internationally for our innovative research programs, and it is the leader in the remarkable growth of RIT’s undergraduate student research programs and the growth of peer-reviewed external grants that are awarded to our faculty each year.

Our graduates are educated in the foundations of science and mathematical sciences, have exposure to current methodology, and have firsthand experience successfully applying this knowledge to solve real-world problems as members of interdisciplinary teams.

We develop the scientific and mathematical literacy required of all RIT graduates to live in our contemporary technological society, and our faculty embraces the challenge of preparing our students for successful lifetime careers in the mathematical, physical, natural, and life sciences.

I encourage you to explore all that RIT and the College of Science have to offer.

Sophia Maggelakis, Ph.D.,
Dean, College of Science

College of Science

Undergraduate students: 795
Graduate students: 235
Experiential learning:
Co-op required in bioinformatics, optional in all other majors; senior capstone projects in physics and environmental science; study abroad and undergraduate research encouraged
26 Goldwater Scholars in 11 years: The Goldwater Scholarship is the premier award of its type in the fields of mathematics, natural sciences, and engineering. In 2015, RIT was one of only eight universities in the nation awarded the maximum number of four scholars.
2015 Fulbright Scholar: Rose Rustowicz, an imaging science undergraduate, will work with a research team at the University of Iceland to conduct remote sensing at the Hekla volcano to create an assessment of the landscape that will allow them to map and monitor hazardous and vulnerable areas.
Alumni: 7,700
Degrees offered: BS, MS, Ph.D.
Research highlights:
• Bio+Sciences (biochemistry, biomathematics, biophysics, bioimaging, biotechnology, bioinformatics, and biostatistics)
• Imaging science
• Color science
• Detectors
• Astrophysical sciences
• Physical sciences
• STEM education and evaluation
The College of Science is at the heart of math and science education at RIT. It also collaborates with other RIT colleges to offer additional related bachelor of science degree programs. These partnerships offer students an unequaled range of program options; committed, experienced faculty; myriad undergraduate research and co-op opportunities; and student access to incredible laboratory equipment and facilities. In short, the College of Science and its alliances with other RIT colleges form a dynamic math and science education powerhouse.

A student-centered environment
RIT’s College of Science combines the best features of a large technological university—a challenging academic curriculum, state-of-the-art facilities and technology, and extensive after-class opportunities—with the benefits of a small college—intimate, interactive classes, personal attention from professors, and staff members who know you.

Career-oriented programs
You’ll find that our combination of teaching, research, and practical work experience ensures you receive an education that is comprehensive and up to date. The College of Science has an outstanding record of producing graduates capable of leading the next wave of breakthroughs, discoveries, and innovations. Consistently, within six months of graduation 91 percent of our graduates are employed full time or enrolled in graduate school.

Graduate school placement
The College of Science gives you the academic preparation you need to succeed in graduate school. Our students enjoy a high rate of acceptance into top-notch graduate programs in science, business, and other areas, as well as respected medical, dental, veterinary, and optometry schools. Many of our graduates choose to go directly into graduate or professional school after graduation. Many others will return for further education at the graduate level as part of their career development. Our graduates do especially well in graduate school because of the strong academic program and laboratory and cooperative education experiences gained at RIT. See page 3 for more specific information on graduate schools enrolling RIT graduates.

Dedicated, accessible faculty
Your professors will be among your most important resources at RIT. Because many of them are active in research and consulting, they’ll bring real-world issues into the classroom and challenge you to evaluate the latest scientific developments. They are eager to help you initiate your own original research projects, and to give you advice about graduate schools and careers. By working with them, you’ll learn how scholars and researchers work, and you’ll benefit from the chance to know them as mentors, advisers, and friends who are dedicated to helping you succeed. See page 26 for an introduction to a few of our faculty.
Undergraduate research
A great benefit of the majors in the College of Science is the opportunity to perform research while you’re an undergraduate student. Under the guidance of your faculty research adviser, you can design your own project (based on a topic that intrigues you), carry out all of the experiments, and analyze and interpret the results. Credit toward your degree can be earned for this research, and some students present their findings at scientific meetings or publish their work in professional science journals.

Women in Science
The Women in Science (Wise) program plays a central role in contributing to the engagement of women in sciences and mathematics through a diverse and unique educational experience. The program engages women by offering information, support and advocacy, and equity and collaboration opportunities that break down barriers and enhance the education and career growth of our female students. The program creates networking opportunities, increases the awareness of all the possibilities that exist for women in science and mathematics, and strives to increase enrollment and participation by women in science and math at all levels. For more information, visit rit.edu/science/wise.

A launching pad for brilliant careers
Rigorous academic preparation is only one part of your RIT education. You’ll also have the opportunity to gain practical experience through undergraduate research, internships, or cooperative education (co-op). A number of opportunities give you the chance to work with faculty members on research initiatives that interest you. These experiences can give you a broad view of the opportunities available in your career, deepen your understanding of your academic studies, and provide a launching pad for a brilliant future.
Majors and Options

The College of Science is home to eleven undergraduate majors in science and mathematics. Our students enjoy an exceptional range of program specialities, undergraduate research opportunities with full-time faculty, and a personalized approach to education not found at other universities of this size.
How it works
If you are interested in medical school or one of the other health profession schools (dentistry, optometry, pharmacy, or veterinary), RIT’s premedical studies and pre-health professions advisory program is available to you regardless of your major. The advisory program provides you with the guidance, assistance, and information you will need to complete the admissions requirements for graduate programs in the medical and health professions. Schools where our graduates have successfully been admitted include Johns Hopkins University, University of Rochester, Stanford University, Tulane University, Georgetown University, and Case Western Reserve University.

Lake Erie College of Osteopathic Medicine (LECOM) Early Acceptance Programs
RIT students interested in medicine, pharmacy, and dentistry are able to gain provisional early acceptance to LECOM, and in some cases, begin their studies at LECOM prior to completing their bachelor’s degrees. The LECOM’s Early Acceptance Program agreements with RIT are as follows:

- College of Medicine, “3+4” and “4+4”—Students will attend RIT for either three or four years, and then complete four years of study at LECOM to earn the Doctor of Osteopathic Medicine (D.O.) degree.

- School of Dental Medicine, “4+4”—Students will attend RIT for four years and then complete four years at LECOM. The Early Acceptance Program for the DMD degree is offered only at LECOM’s campus in Bradenton, Fla.

The affiliation program is administered through RIT’s Office of the Director of Premedical and Health Professions Advising in the College of Health Sciences and Technology. For more information, go to http://lecom.edu/entrance-requirements.php and follow the link for LECOM Undergraduate Affiliated Colleges.

Minimum premedical core requirements
Preparation for medical school is changing due to alterations in the Medical College Admission Test (MCAT). Students are encouraged to communicate regularly with their academic adviser for updates on prerequisites, and for planning and course selection. To ensure you meet the core prerequisites for medical school, and have the content knowledge necessary for the MCAT, the following core requirements are recommended:

<table>

Explore your options
The science exploration option lets you take one academic year to explore different majors in the College of Science. This option provides extra time for you to meet faculty and students in each academic major, tour facilities, experience classes and labs, and investigate the rewards of a career in each discipline.

How it works
During your first year, you will participate in a yearlong sequence of courses built around a single project aimed at designing, building, and conducting scientific research. While exploring the various majors to choose from, students will use a team-based approach to conduct research, propose scientific studies, analyze and validate the results, and present the findings. This approach to interdisciplinary education emphasizes real-world, hands-on problem solving.

By the end of the year, students choose from any of the majors in the College of Science. Students may also apply to transfer to majors in other colleges of RIT on a space-available basis.

What you’ll study
First Year
Science Exploration
First Year Writing
Year One: College Experience
Mathematics or Calculus sequence
Choice of laboratory sciences:
• Biology
• Chemistry
• Physics
• Imaging Science
Additional course choices:
• Computer Science
General Education—Liberal Arts and Sciences
Wellness Education

Program Strengths
Personalized individual advising sessions
Computer-assisted career exploration
Cross-disciplinary advising team
Co-op and career opportunities explored
Hands-on undergraduate research

First-year students in the science exploration option were charged with solving an age-old question: Is there life on Mars? Students examine meteorite fragments to learn about the scientific process.
A focus on problem solving
RIT’s applied mathematics major focuses on the solution of problems that can be mathematically analyzed. The curriculum provides you with broad-based mathematics and statistics knowledge and appropriate computer skills. RIT professors integrate symbolic computation into their courses, and software such as Mathematica, Maple, and Matlab is used to enhance your learning. In specially equipped facilities, you will also have access to programming, statistical and simulation languages, graphics and multimedia software, and design tools on a variety of platforms.

The major aims to develop your logical, analytical, and problem-solving abilities and increase your use of the mathematical sciences as a problem-solving tool in a wide range of application areas.

Specialize with a program concentration
As part of this major, you will select an area of specialization in a subject of particular interest to you. Concentrations provide the knowledge and skills you need to collaborate on complex problems with scientists, engineers, computer specialists, and other professionals, and to apply your mathematical expertise in a specific career area. You can choose from one of more than 20 applications areas, such as applied statistics, actuarial science, biology, economics, chemistry, and engineering.

Earn an accelerated master’s degree
Students in the applied mathematics major may elect one of our accelerated dual-degree programs. These options enable you to earn both a bachelor’s degree and a master’s degree in less time than completing both programs separately. Applied mathematics students may consider an MS degree in applied and computational mathematics.

Success after graduation
A BS degree in applied mathematics is highly regarded in business and industry and provides a foundation for advanced degrees in business, law, medicine, computer science, and economics, as well as mathematics. Applied mathematics graduates work in federal and state government and in a range of business, scientific, engineering, and high-tech fields, including information technology, telecommunications, medical research, and others.

What you’ll study

First and Second Years
- First Year Writing
- Year One: College Experience
- Mathematics and Statistics Seminar
- Project-Based Calculus I, II
- Discrete Mathematics with Introduction to Proofs
- Principles of Computing
- Computer Science I
- Multivariable and Vector Calculus
- Probability and Statistics I, II
- Differential Equations
- Linear Algebra
- Mathematical Sciences Job Search Seminar
- General Education—Liberal Arts and Sciences
- Wellness Education

Third and Fourth Years
- Real Variables I
- Advanced Linear Algebra
- Abstract Algebra I
- Numerical Analysis
- Mathematical Modeling
- Program Electives
- Laboratory Science Sequence
- General Education—Liberal Arts and Sciences
- Free Electives
- Cooperative Education (Optional)

Alison Prengaman
Hometown: Riverside, Rhode Island
Major: BS/MS, Applied Mathematics
Activities: RIT Honors program; member, PiRIT, Assistant Vice President, College Panhellenic Council (RIT’s Greek Council); Honor Council Chairwoman, Sigma Sigma Sigma; Resident Adviser, Center for Residence Life; Student Government Greek Senator
Co-op Placement: Operations Logistics Co-op, LMI

Alison Prengaman had no idea what she wanted to do with her math major. All she knew was that she loved math and loved the idea that you could “use the information you’re given and learn how it can lead you to where you need to go.” When she was on co-op at LMI, a government contractor, Prengaman was stationed with the U.S. Army inside the Pentagon, where she provided analytical support for several of the Army’s logistic issues. “My co-op was really cool and fascinating. It really opened my eyes to the fact that you can use math for literally anything you want to,” she says. The uniqueness of her major, which combines applied mathematics with a strong theoretical background, has prepared her to engage in an applied co-op, but she also feels primed for theoretical work, such as research. “I like that I have the option of going on to get a Ph.D. and become a professor, or I can graduate and go straight into industry to work. This major prepares you for both.”
A career-oriented focus
The applied statistics and actuarial science major provides you with a strong foundation in mathematical and statistical methodology, experience in applications of statistics, and a strong background in the use of modern statistical software to analyze and interpret data.

You will be exposed to application areas such as product design, quality control, statistical forecasting, biostatistics, and research methodology. Your course work also gives you the needed training to apply statistics in biological sciences as a bio-statistician in medicine, public health, or in the rapidly growing field of bioinformatics. You could also choose to get trained in the aspects of quality science from problem definition to solution implementation.

With careful planning you can complete course work preparing you for at least two of the preliminary exams offered by the Society of Actuaries and the Casualty Actuarial Society. With the careful choice of elective courses, you may take the American Society for Quality Certified Process Analyst exam, which opens doors in many industries in need of such experience.

Two degrees in five years
RIT offers accelerated BS/MS programs that enable you to earn a bachelor’s and master’s degree with just one additional year of study. The BS in applied statistics and actuarial science may be combined with an MS in applied statistics or with an MBA offered by RIT’s Saunders College of Business. You may also pursue the MS in applied and computational mathematics.

A wide choice for careers and advanced study
Graduates with a degree in applied statistics and actuarial science have a wide choice of job opportunities and excellent long-term career prospects. Recent graduates work in many areas of government, business, and industry as financial consultants, analysts, life insurance actuaries, and quality control specialists. A number of our graduates are also pursuing graduate degrees in prestigious doctoral programs in statistics, mathematics, economics, business, or law.

- Cooperative Education (Optional)
Combine your interests
In the biochemistry major, you will learn about the study of biological questions using the quantitative tools and molecular principles that lie at the heart of chemistry. Traditional chemistry course work is supplemented with introductory and advanced courses in biological sciences, including cell biology and molecular biology. The biochemistry curriculum can be completed in four or five years, depending on the amount of cooperative education you complete. Research is highly recommended, as is co-op, which may begin as early as the summer after your first year.

Two tracks
The biochemistry major offers two tracks: one that follows the guidelines of the American Society of Biochemists and Molecular Biologists (ASBMB) and one that is certified by the American Chemical Society (ACS). The ASBMB program allows more science and other electives in fields such as biology, while the ACS program includes courses in quantum chemistry and inorganic chemistry. Both options prepare students for direct entry into graduate-level chemistry, biochemistry, and biomolecular science programs.

Undergraduate research—the chance of a lifetime
Although research is optional for biochemistry majors, many students choose to participate at some point during their academic career. Recent biochemistry majors have worked with RIT faculty during both the academic year and summers as Undergraduate Research Scholars. Other biochemistry students have taken advantage of summer research opportunities at a variety of other institutions ranging from Boston University and University of Rochester to UC–San Diego and Amgen Corporation (Los Angeles).

ACS Certified Programs
RIT’s School of Chemistry and Materials Science offers undergraduate programs in biochemistry and chemistry. These programs are certified by the Committee on Professional Training of the American Chemical Society (ACS) and meet a wide range of quality standards relating to curriculum, teaching, research, and intellectual climate. This certification ensures a rigorous program and strong career preparation.

Graduate study and employment opportunities
Our biochemistry graduates have been admitted to doctoral programs in biochemistry and other associated areas at a number of prestigious universities, including Cornell, Harvard, Duke, and UC Berkeley. Students seeking employment after graduation have obtained jobs at well-respected companies such as Merck and Johnson & Johnson. For students interested in pursuing a career in medicine, biochemistry graduates have been accepted to a number of medical schools, including Syracuse, Georgetown, and University of Rochester.

Elizabeth May
Hometown: Pittsford, New York
Major: Biochemistry
Activities: member, Varsity Women’s Soccer
Research: Drug quality assurance with Dr. Scott Williams

Elizabeth May originally declared biotechnology and molecular bioscience as her major, but changed after her first year. “When you learn about biology, they teach you the overall processes that happen, but I wanted to go into more detail to understand why these things happened. That’s where the chemistry comes in. You learn about metabolism and all kinds of biochemical pathways. It’s a lot more interesting to me,” she says of her major.

May is engaged in undergraduate research, working with professor Scott Williams in drug quality assurance. Together they are developing tests for tuberculosis drugs to determine if they are counterfeit, an issue that has global implications. Counterfeit drugs are those without the active ingredient, with an insufficient or excessive quantity of the active ingredient, the wrong active ingredient, or with fake packaging. While tests currently exist, they are complicated and require advanced chemistry training. May and Dr. Williams are working on a simple test where a drug sample can be dropped into treated water with a change in water color indicating whether the drug is authentic. “Since so much counterfeiting happens in underdeveloped nations, an untrained technician can complete basic testing.”
Exploring the human genome
Biotechnology research is creating an exploding demand for well-trained bioinformatics professionals. RIT has responded to this need by offering BS and MS programs in bioinformatics. In laboratory exercises and assignments, you’ll learn how to sequence DNA, then use sophisticated computer programs to analyze that sequence and predict molecular models. You will learn how to interpret vast amounts of data, predict targets for new drugs, and determine routes to gene therapy.

Get hands-on experience through co-op
A valuable aspect of an RIT education is the opportunity to integrate cooperative education experiences into your degree program. These short-term, full-time, paid jobs allow you to enhance your education in real-world situations. Bioinformatics students are prepared for cooperative work experience upon completion of their second year of the program.

BS/MS option
If you really want to differentiate yourself in the job market, you may choose to pursue the accelerated BS/MS in bioinformatics. This option can enrich your research experiences and better prepare you for further graduate education as well.

What kinds of careers are available?
As the most rapidly growing field within biotechnology, bioinformatics encompasses several disciplines and can lead to multiple career directions. Your studies may lead to a career in genomics—the application of computational methods to analyze the vast amounts of data being produced by sequencing centers throughout the world and related efforts in the public and private sectors. Another career option is proteomics, or the use of computer technologies to analyze protein structures, a critical function within the modern drug discovery process.

Bioinformatics
Thomas H. Gosnell School of Life Sciences

Jeff “Nick” Fisk

Hometown: Las Cruces, New Mexico
Major: BS in Biotechnology and Molecular Bioscience and a BS/MS in Bioinformatics
Activities: Varsity Men’s Wrestling
Research: “Science of Superheroes,” an interactive exhibit for Imagine RIT: Innovation and Creativity Festival

The “Science of Superheroes” exhibit, at 2015’s Imagine RIT: Innovation and Creativity Festival, drew crowds. Its timing was perfect, with Marvel’s The Avengers: Age of Ultron film hitting theaters two weeks later. The exhibit looked at superheroes and dissected their super talents. Nick Fisk, the mastermind behind the exhibit, has a theory: that super powers exist already in science. Case in point, Fisk compared Marvel Comic supervillain Mystique’s shape-shifting talent to an octopus’s “chromatophores,” or cells that contain pigment and reflect light.

Fisk enrolled in RIT with several college credits from high school, which is enabling him to earn two bachelor’s degrees, one in biotechnology and molecular bioscience and a second in bioinformatics. While engaged in his bioinformatics studies, he decided to pursue the BS/MS option to assess his interest and aptitude for pursuing an advanced degree. Fisk is motivated by his interest in helping people. “Solving seemingly impossible problems really sold me,” he says of his program. He hopes to pursue a doctorate in computational biology.

A flexible major
Your biology program starts with foundation courses in biology, math, chemistry, and the liberal arts and then immerses you in the biological sciences, studying animals, microorganisms, and plants at the levels of molecules, cells, tissues, organisms, populations, and the environment. You will acquire a comprehensive set of practical skills, from the proper way to prepare cultures in the lab to the appropriate methods of gathering and analyzing ecological data in the field. Undergraduate research is strongly encouraged and further strengthens your preparation for graduate study or employment.

Enhance your education
Through research, minors, and study abroad, you will have opportunities to customize your education. The Research Scholars Program is an active community of students who design and execute their own research projects under the guidance of faculty mentors. Students conduct research, attend weekly seminars, and have the opportunity to publish their research findings. With more than 90 minors to choose from, you can strengthen your biology degree with a complementary set of courses or explore an area of personal interest. Study abroad gives you a global view of the world and its different cultures.

Embark on a rewarding career
Career opportunities are abundant in exciting fields in the life sciences. You will be well prepared for careers in biomedical research, medicine, genetics, immunology, virology, microbiology, plant science, ecology, animal behavior, veterinary medicine, infectious diseases, cancer research, pharmaceuticals, vaccine development, and scientific management.

A molecular bioscience perspective
Building on a core of biology/molecular biology, chemistry, math, and the liberal arts, the courses in our major are taught from a molecular bioscience perspective focused on the central dogma of molecular biology. The curriculum explores the exciting and rapidly expanding field of genetic engineering and the almost unlimited potential that controlled genetic experiments have for improving the quality of life. Specialized areas of emphasis include recombinant DNA, mammalian and plant tissue culture, monoclonal antibody production and purification, large-scale fermentation techniques, and methods for characterization and separation of proteins and nucleic acids, in addition to other micro- and macro-molecules.

Build a career in biotechnology
Genetics plays a role in virtually every aspect of life. As a result, careers in biotechnology are growing rapidly. With a degree from RIT, you are prepared to play a central role in this innovative, emerging field. Our graduates are successfully working in many areas of biology and biotechnology, including pharmaceuticals, environmental science, forensic science, genomics, health care, and biomedical research.
Choose your path
In the chemistry major, you’ll acquire a sound base of scientific knowledge and learn the modern applications of chemistry. Through courses in general, analytical, physical, organic, and inorganic chemistry, you’ll develop a thorough understanding of substances and their chemical properties, how they can be manipulated, and ultimately how they can be transformed into new materials. This major offers you the chance to choose a concentration or minor in complementary fields such as imaging science, business, communication, biology, criminal justice, engineering, environmental science, packaging science, computer science, physics, or mathematics.

Opportunities are everywhere
Top employers hold RIT chemistry graduates in high regard due to the large amount of laboratory work required in our programs. Our graduates are employed by a wide range of industries, including pharmaceuticals, plastics, environmental health, microelectronics, and many others. There are career options in research and development, laboratory operations and production, marketing, and management. The scientific and analytical skills that you acquire can also lead to careers in other high-tech fields. More than 50 percent of our graduates pursue advanced degrees at many of our nation’s most respected graduate and professional schools.

ACS certified programs
The School of Chemistry and Materials Science offers undergraduate majors in biochemistry and chemistry. These programs are certified by the Committee on Professional Training of the American Chemical Society (ACS) and meet a wide range of quality standards relating to curriculum, teaching, research, and intellectual climate. This certification ensures a rigorous program and strong career preparation.

Accelerated dual-degree options
Chemistry majors have an opportunity to participate in one of two accelerated BS/MS degree options. Highly motivated students may earn a BS/MS in chemistry or a BS in chemistry with an MS in materials science and engineering. Students can earn either dual-degree option in five years with careful planning and course selection.

Taylor Barrett

Hometown: Middletown, Pennsylvania
Major: Chemistry
Minor: Spanish
Awards and Recognition: 2014 Barry M. Goldwater Scholar; recipient, World Molecular Imaging Congress travel grant
Activities: Honors Program; RIT Chemistry Research Scholar; secretary, House of General Science; peer adviser, RIT’s Year One Program; orientation assistant and operations manager, New Student Orientation
Research Experience: Amgen Scholar, University of California at Berkeley

Taylor Barrett chose RIT for its range of undergraduate research opportunities. “Many schools do not have undergraduates in the lab in the way that RIT does,” she says. “In my lab, I'm not working on a graduate student's project and simply helping them. I am running my own project and coming up with my own ideas of how to overcome any challenges a research project may present.” It’s this hands-on experience that helped Barrett win a 2014 Barry M. Goldwater Scholarship, the premier undergraduate award for research in the sciences. Working in the laboratory of Hans Schmitthenner, an RIT research scientist, Barrett has worked on creating peptide scaffolds for targeted multi-modal imaging agents. “The thing I love about research is that if I have a question about the way the world around me works, I can use my knowledge of chemistry to try and answer those questions,” she says. Barrett plans to pursue a doctorate and hopes to open her own lab or help create science policy.
The best of both worlds
RIT’s computational mathematics major allows you to explore the exciting interactions between mathematics and computer science. The curriculum provides a foundation in mathematics through courses in calculus, differential equations, graph theory, abstract and linear algebra, mathematical modeling, numerical analysis, and several other areas. You will gain extensive computing skills through a number of high-level programming, system design, and other computer science courses, open access to educational and professional software, and hands-on exposure to RIT’s state-of-the-art computing equipment. Your studies will focus on using the computer as a tool to solve mathematically modeled physical problems through project-oriented team assignments and laboratory sessions that emphasize real-world applications of knowledge.

Combined BS/MS opportunity
A great feature of the computational mathematics major is the opportunity it provides for students to complete a dual degree in as little as one extra year of study. You can complete a BS in computational mathematics and an MS in computer science, giving you an edge over many math or computer science majors entering the work force. You also may combine a BS in computational mathematics with an MS in applied and computational mathematics.

Select your career
Job opportunities in private industry and government are plentiful, and RIT graduates are eagerly sought after by many employers. Upon graduation, you’ll join our successful alumni who are working as mathematical analysts, scientific programmers, software engineers, systems analysts, and more. Other graduates are working in education and consulting or pursuing advanced degrees in graduate programs across the nation.

What you’ll study

First and Second Years
- First Year Writing
- Year One: College Experience
- Mathematics and Statistics Seminar
- Project-Based Calculus I, II
- Discrete Mathematics with Introduction to Proofs
- Computer Science I, II
- Multivariable and Vector Calculus
- Probability and Statistics I
- Differential Equations
- Linear Algebra
- Mechanics of Programming
- Introduction to Computer Science Theory
- Mathematical Sciences Job Search Seminar
- Laboratory Science Sequence
- General Education—Liberal Arts and Sciences
- Wellness Education

Third and Fourth Years
- Real Variables I
- Advanced Linear Algebra
- Abstract Algebra I
- Software Engineering
- Numerical Analysis
- Mathematical Modeling
- Numerical Linear Algebra or Graph Theory
- Program Electives
- General Education—Liberal Arts and Sciences
- Free Electives
- Cooperative Education (Optional)

Mathematical Modeling of Arrhythmia

Tamalika Mukherjee

Hometown: Kolkata, India
Major: BS/MS in Computational Mathematics/Applied and Computational Mathematics
Minor: Computer Science
Activities: Student ambassador, RIT Office of Career Services and Cooperative Education; RIT Leadership Institute; PRIT (mathematics club)
Co-op Placement: Windows Azure Explorer Intern, Microsoft
Awards: RIT Outstanding Undergraduate Scholar, John Wiley Jones Outstanding Student in Science Award
Research Experience: 2014 RIT Summer Undergraduate Research Fellowship; Cryptography Research Project at Indian Statistical Institute, Kolkata, India

Tamalika Mukherjee is ambitious with three different research projects in the pipeline. On a summer fellowship from the College of Science, Mukherjee studied the dynamics of an economic model and the behavior of its inverse limits. Her second research project focused on studying the properties of logical puzzles made by the famous puzzle designer Oskar van Deventer and trying to generalize their solutions. Her third research project laid the groundwork for her thesis, which will center on elliptic curve cryptography. “The more I learn, the better I get at learning and understanding new things. Research has taught me discipline and patience, and how to apply my mind in ways I couldn’t imagine,” she says. Mukherjee hopes to earn her doctorate in mathematics and work in a research and development lab for a company such as IBM, Microsoft, or Google.
An interdisciplinary major
RIT's environmental science major provides solid educational preparation in science, math, liberal arts, communication, critical thinking, and problem solving. The interdisciplinary nature of environmental science demands a foundation of knowledge from a variety of academic fields. This major is unique because it is designed and implemented jointly by the College of Science and the College of Liberal Arts. After the fundamentals, you will take specialized electives to gain depth in a scientific/technical area. Available tracks include environmental chemistry, digital imaging, remote sensing, environmental engineering technology, environmental biology, mathematics and statistics, environmental public policy, and environmental economics, or you may self-design a concentration. Upon graduation, you will have not only a substantial scientific understanding of environmental problems but also an appreciation of the larger social, political, and economic contexts in which they arise and from which solutions must be sought.

Solve real-world problems
We place an emphasis on finding the solutions to environmental problems, rather than merely describing them. Our major incorporates extensive field work, research, and problem-solving exercises. In a year-long senior capstone experience, you and your professors will work closely with members of the environmental community (government agencies, private organizations, and industry) to develop and implement workable solutions. Your participation in cooperative education is highly recommended. Co-op gives you the chance to make a positive impact on the environment while you’re still in school and can provide you with valuable, hands-on experience in environmental settings such as wildlife conservation, pollution control, energy, waste management, or public health.

The BS/MS advantage
The environmental science major offers two degree options: a four-year program leading to a bachelor of science degree or an accelerated five-year dual-degree option leading to both bachelor of science and master of science degrees. This accelerated option includes an extensive environmental research project. The five-year BS/MS is available to students who want to earn a graduate degree in less time.

What you'll study

First and Second Years

First Year Writing
Year One: College Experience
Concepts of Environmental Science
Introductory Biology I, II
General Ecology
Conservation Biology
General and Analytical Chemistry I, II, and Labs
Environmental Workshop
Applications of Geographic Information Systems
Environmental Science Field Studies
Environment and Society
Applied Calculus
General Education—Liberal Arts and Sciences
Wellness Education

Third and Fourth Years

Great Lakes
Introduction to Statistics I, II
Environmental Science Concentration Courses
Organic Chemistry I and Lab
Environmental Policy or Introduction to Qualitative Policy Analysis
Environmental Science Capstone I, II

Fourth Year

Environmental Applications of Remote Sensing
Hydraulic Applications of GIS
General Education—Liberal Arts and Sciences
Free Electives
Cooperative Education (Optional)

Fifth Year (BS/MS students)

Environmental Science Graduate Studies
Biodiversity and Society
Graduate Public Policy Core Elective
Graduate Science Core Elective
Graduate Elective
Advanced Concepts of Environmental Chemistry
Advanced Applications of GIS
Environmental Science Graduate Research
Environmental Science Thesis or Environmental Science Project

Delanie Spangler

Hometown: Cazenovia, New York
Major: Environmental Science
Minor: Music Performance
Activities: exhibitor, “Environmental Explorations in Your Own Backyard;” Imagine RIT: Innovation and Creativity Festival
Research: Decomposition of black soldier fly larvae for composting with Dr. Dawn Carter; Green infrastructure at the Rochester Museum and Science Center with Dr. Christy Tyler

Delanie Spangler doesn't mind “getting her hands dirty by just going out into the field and taking samples in the mud.” It’s her love of the environment that drives her. “I love the conservation part of it and helping to save the planet,” she says. Spangler chose the College of Science for its close, intimate setting. “I know a lot of the faculty by name and I have close relationships with them.” The environmental science major, with concentrations in areas as diverse as digital imaging, environmental biology, environmental economics, and public policy, is broad enough to cover students’ diverse interests and career aspirations. “All of the environmental science students want to do something different and we all bring something unique to the table.” When she completes her studies, Spangler wants to pursue graduate study in conservation and help clean up the environment.
Imaging scientists are responsible for such innovations as digital cameras, scanners, satellite imaging systems, radar, sonar, night vision equipment, image processing software, and medical imaging technologies like magnetic resonance imagers (MRI) and X-ray systems. The unique, interdisciplinary BS degree program, offered by RIT’s Chester F. Carlson Center for Imaging Science, allows you to explore this world of imaging. You’ll undertake a laboratory-intensive program that combines physics, mathematics, and computer science en route to a degree with a wide variety of exciting career options. The imaging science major begins with a novel, yearlong, project-based class in a free-form learning environment, and culminates with an independent research project under the guidance of center faculty.

Unmatched facilities
The department features dozens of highly specialized teaching and research labs filled with powerful learning tools such as scanning and transmission electron microscopes, thermal imagers, LiDAR, Nuclear Magnetic Resonance (NMR), spectrophotometers, and eye-tracking devices. As an undergraduate student, you’ll have access to all of our facilities, including the Digital Imaging and Remote Sensing Lab, Digital Image Restoration Lab, Multimodal Biomedical Imaging Lab, the Multidisciplinary Vision Research Lab, and the Perception for Movement Lab.

What you’ll study

First and Second Years
- First Year Writing
- Year One: College Experience
- Introduction to Computing and Control
- Innovative Freshman Experience I, II
- Introduction to Video and Imaging Systems
- Project-Based Calculus I, II
- Multivariable and Vector Calculus
- Probability and Statistics for Imaging

Third and Fourth Years
- Geometric Optics
- Physical Optics
- Radiometry
- Interactions Between Light and Matter
- Image Processing and Computer Vision I, II
- Noise and System Modeling
- Imaging Detectors
- Imaging Systems Analysis
- Imaging Science Senior Project I, II
- Imaging Science Elective Track I, II
- General Education—Liberal Arts and Sciences
- Wellness Education
- Free Electives

Elizabeth Bondi

Hometown: Dansville, New York
Major: Imaging Science
Immersion: Italian
Activities: Honors Program, Optical Society of America, Rochester Section and RIT Student Chapter; National Society of Leadership and Success; Imaging Science & Technology Student Chapter; RIT Yoga Club
Co-op Placements: Jet Propulsion Lab, Exelixis

Elizabeth first explored RIT through a summer research program she completed her junior year of high school. She fell in love with imaging science and the multidisciplinary nature of the field. “I’ve been learning physics, calculus, computer science, engineering, all of these different types of fields. I found imaging science and it combined all these wonderful areas. The applications of imaging science are so cool,” she says.

An application area she has focused her research on is the restoration of ancient documents, which led her to Vercelli, Italy, where she spent two weeks at the Museo del Tesoro del Duomo. There, she participated in restoring the “Vercelli Codex Evangeliorum Vercellensis,” a 4th century text of the first four books of the New Testament in Latin. Bondi assisted in processing multispectral images of the document. She taught other students from the University of Mississippi some of the processing techniques she and Dr. Easton employed. Bondi plans to attend graduate school to pursue a doctorate degree.
Balance is the key
The hallmark of the RIT physics major is the balance between theoretical content and practical skill development. The curriculum begins with mathematics, science, and liberal arts courses, then adds courses covering the breadth of the subject from condensed matter to cosmology. The major can be completed in four or five years, with cooperative work experience.

A planned elective concentration or minor in another field such as biology, chemistry, mathematics, computer science, business, imaging science, or optical physics is possible. Upon graduation, you will have successfully completed one of the most intellectually challenging academic programs. You will have gained experience working with professional researchers and on teams with your fellow students. As a result, you’ll enjoy a wide choice of high-quality career opportunities.

High-tech physics laboratories
The School of Physics and Astronomy has a broad range of specialized facilities with up-to-date equipment for teaching and research. These labs are available for undergraduate student use and include the Solar Cell Technology Lab, Nanopower Research Lab, Magnetic Materials Lab, Laser Light Scattering Lab, X-ray and Surface Science Lab, Atomic-Scale Microscopy Lab, Granular Materials Lab, Electronics Lab, Optics Lab, Quantum Optics Lab, and Modern Physics Lab. A supercomputer cluster has been developed for research in astrophysics.

Cutting-edge research
Each RIT physics major gains real-world research experience through a significant and individualized senior capstone project mentored by one of our faculty members. Students undertake research in such areas as astrophysics and astronomy, optics and lasers, X-ray and surface science, biological physics, and nanomaterials, with projects that can be experimental, computational, and/or theoretical in nature. Students present their progress via both publication-formatted written reports and conference-style talks. Some student research projects are presented at professional meetings or lead to publications in refereed physics journals. Although not required, physics majors also have numerous opportunities to engage in cooperative educational experiences. These include summer experiences in industry, as well as at various national and university laboratories. Physics students may also complete an accelerated dual degree where they can earn a BS in physics and an MS in materials science and engineering in five years.

Career possibilities
Physics graduates find employment in a wide range of fields, including astrophysics, solid state physics, nuclear physics, optics, atomic and molecular physics, materials science, engineering, computing, and education. Many graduates pursue advanced degrees in physics or physics-related areas, such as biophysics, geophysics, atmospheric science, imaging science, and engineering. Others prepare for entry into medical, law, or business schools.

Lucas Shadler

**Hometown:** Irondequoit, New York  
**Major:** Physics  
**Minors:** Mathematics, Computer Science, Electrical Engineering  
**Research Experience:**  
REU at the Fermilab in Chicago

The opportunity to conduct undergraduate research drew Lucas Shadler to RIT. He chose to major in physics because he “enjoys using creative problem solving and applying it to math. I also enjoy trying to understand and explain things.”

His research interests have brought him to the Universidade Federal Do Rio Grande Do Sul in Porto Alegre, Brazil, where he gave a weeklong workshop on how to use a program that simulates black holes. He also had the opportunity to study photovoltaics in RIT’s Microelectronics and Nanopower Lab, where he tested the efficiency of solar cells. Shadler was awarded a Research Experience for Undergraduates (REU) at the Fermilab in Chicago, where he will study high-energy particle physics. As for his future plans, Shadler is unsure which direction he plans to pursue, but hopes his quest for knowledge will lead him toward making the biggest impact he can on the world. Whether that’s through research, a position in industry, or as a professor, he likes that the physics program gives him the option to pursue any direction he chooses.
Related Majors

As one of the world’s leading technological institutions, RIT excels not only in the traditional sciences and mathematics, but also in innovative offerings in health sciences, computing, business, engineering, technology, and the visual arts.
Biomedical Engineering
Kate Gleason College of Engineering
www.rit.edu/kgcoe

Prosthetic limbs and joints, microscopic cameras used in orthopedic surgery, dialysis machines, cardiac assist devices...these medical instruments and systems were developed by biomedical engineers. Biomedical engineering applies the principles and theories of engineering to solve problems in the widely varied field of medicine.

An in-demand field
The need for sophisticated diagnostic and therapeutic equipment and solutions has fueled the demand for biomedical engineers. Biomedical engineers combine their knowledge of engineering with biology, anatomy, and physiology to create devices and systems for a variety of health care issues. They can be found working alongside scientists, other engineering professionals, and medical practitioners to evaluate the complex, interdependent systems of the human body to develop effective solutions to enhance the quality of life for patients.

Gain hands-on experience
What sets RIT’s biomedical engineering program apart from other programs is approximately one year of cooperative education, which allows students to apply the skills they learn in the classroom to the development of real medical solutions.

Photographic and Imaging Technologies
College of Imaging Arts and Sciences
cias.rit.edu

The photographic and imaging technologies major, with its options in biomedical photographic communications and imaging and photographic technology, prepares you for a career providing for scientific information via imagery.

Two options
Biomedical photographers are at the forefront of advances in medicine and science, whether photographing landmark surgery in an operating room or the rainbow of colors in a butterfly wing. You are prepared for a photographic career in forensics, research, hospitals, and other biological settings such as ophthalmic (eye) clinics, veterinary centers, and other life science situations.

Lasers, computer-controlled cameras, high-speed film, stroboscopes, digital editing equipment—all these powerful tools are altering the face of photography, and at the forefront of these changes is the imaging and photographic technology option. This unique, applications-oriented program prepares you for careers in a technical, industrial, or scientific environment.

Certification
The biomedical photographic communications option provides the educational background for the registered biomedical photographer (RBP) certification after you enter the profession. Your course work also can be tailored to assist you in preparing for the certified retinal angiographer (CRA) exam.

Biomedical Sciences
College of Health Sciences and Technology
www.rit.edu/chst

Careers in health care are growing rapidly and our biomedical sciences major is your gateway to an exciting profession in the fields of health care and biomedical research. The major is designed to prepare you for entry to health care or research positions where you’ll assist patients and help discover new advances. The program will also prepare you with the training and support you’ll need to take on the rigors of advanced study should you choose to pursue medical, dental, pharmacy, physician assistant, or graduate school.

Tailor your degree
Further develop your skills and knowledge by choosing a concentration or selected electives. Concentrations are available in forensic science, professional studies (pre-medical, pre-dental, or pre-veterinary), exercise science, or pathology (the study of disease). Elective courses in endocrinology, genetics, histology, diagnostic medical imaging, patient care, virology, diagnosing the criminal mind, gross anatomy, and biochemistry allow you to customize your education.

Career success
Advances in biotechnology and an increase in professionals needed in new medical research industries have led to rapid growth in the field of biomedical sciences. The need for more research in many areas of health care, including AIDS, diabetes, cancer, and neurological disorders such as Parkinson’s and Alzheimer’s, is great.
Diagnostic medical sonography, one of the fastest growing areas in diagnostic medicine, is a noninvasive, nontoxic medical procedure that uses high-frequency sound waves to create images of a variety of human organs such as the heart, kidneys, liver, pancreas, blood vessels, and reproductive organs. The sonographer works directly with patients, physicians, and other medical personnel on a daily basis and performs a key role in the process of data gathering and synthesis required in the diagnosis and treatment of disease and in the study of the developing fetus.

National qualifying exam and career opportunities
Upon successful completion of the program, you will be eligible to sit for a national qualifying exam administered by the American Registry of Diagnostic Medical Sonography (ARDMS). Passing this examination allows you to work in this field anywhere in the United States and around the world.

Certificate programs available
Certificates in diagnostic medical sonography and echocardiography are designed for individuals with an allied health background or an undergraduate or advanced degree in the life sciences. These options require one year of full-time study in a clinical internship after completion of prerequisite courses.

Dietetics and nutrition have expanded from traditional environments—like hospitals, schools, and nursing homes—into restaurants, fitness centers, and even boardrooms. Today’s dietitian might plan a high-energy menu for a baseball franchise or suggest healthier alternatives to meals for busy executives on the run. The role of nutrition in people’s lives has expanded and changed.

A strong foundation
The nutrition management major, accredited by the Academy of Nutrition and Dietetics (AND), provides you with the knowledge and practical experience necessary to become a registered dietitian. The major offers a challenging curriculum that prepares you for diverse professional opportunities. Biology and chemistry courses expand your scientific knowledge by teaching you how food is used by the human body. You’ll study business, information technology, and the liberal arts as well.

Academy of Nutrition and Dietetics
The nutrition management major, housed in RIT’s College of Health Sciences and Technology, has specific course requirements necessary to meet the core knowledge requirements of the Accreditation Council for Education in Nutrition and Dietetics (ACEND) of the Academy of Nutrition and Dietetics. Upon completion of the degree program and a required dietetic internship, students are eligible to take the National Registration Exam for Dietitians.
Physician Assistant (BS/MS)
College of Health Sciences and Technology
www.rit.edu/chst

Physician assistants are health care professionals licensed to practice medicine with physician supervision. Working with a broad range of responsibilities, physician assistants obtain medical histories, conduct physical exams, order and interpret laboratory tests, diagnose common illnesses, determine and initiate treatment, counsel patients to promote wellness and disease prevention, apply casts, and suture wounds. Physician assistants can also prescribe medications in virtually all states in the U.S. and the profession continues to offer excellent growth opportunities for the future.

A focus on patient care
This major, housed in RIT’s College of Health Sciences and Technology, is a five-year combined BS/MS degree program. From the onset, your studies are centered on the health care environment and patient care.

A full year of clinical experience
Your education includes 12 months of supervised clinical rotations in various health care settings. You’ll get hands-on patient care experience in clinical areas such as inpatient medicine, pediatrics, obstetrics/gynecology, orthopedics, emergency medicine, surgery, family practice, psychiatry, and geriatrics.

National certifying exam
The National Commission on Certification of Physician Assistants (NCCPA) administers the national board examination. Certification is required to practice in most states, including New York.
The College of Science has well-established areas of research in imaging science, color science, detectors, astrophysical sciences, and the physical sciences. Undergraduate students can engage in research as early as their freshman year, working alongside faculty to conduct original research. You’ll carry out all of the experiments, and analyze and interpret the results. You can earn credit toward your degree while you gain valuable, hands-on experience. Our students regularly present their findings at national and international scientific meetings and conferences, or publish their work in professional science journals. You also have access to additional research opportunities that include:

**Undergraduate Research Seminars**—
These weekly seminars are an opportunity for students to present their findings to the RIT community.

**Research Scholars Program**—
The Research Scholars Program is intended for our most advanced research students who wish to pursue graduate school and/or research-based careers.

- **Biological Sciences Research Scholars Program:** A substantial hands-on experience where students execute their own high-quality research projects under the guidance of faculty mentors. Students gain valuable research experience, write papers discussing their work, present their findings, and participate in discussion and lecture series.

- **Chemistry Research Scholars Program:** Intended for students to engage in serious undergraduate research in chemistry, the program features a significant research experience for students to design and execute their own research under the direction of a faculty mentor. Participants take part in discussions and lectures, earn opportunities to travel to conferences, and present their findings.
### Undergraduate Research Examples

#### The Vast Polar Structure (VPoS) of Galaxies Orbiting the Milky Way

**Student Researcher**
Nelson Silva, BS, Physics

**Faculty Adviser**
Sukanya Chakrabarti

**Description**
The dwarf galaxies orbiting the Milky Way seem to lie along a geometric plane. These observations are not consistent with expectations from cosmological simulations. We integrated these orbits into the past based on data from the Hubble Space Telescope to look at how the plane has changed and for possible causes of this structure.

#### Identification of Three Bacteria from Dioscorea sp. (Yellow Yam) by Whole Genome Sequencing and Annotation

**Student Researchers**
Alexander Triassi, BS, Biotechnology and Molecular Bioscience; Matthew Wheatley, BS, Biotechnology and Molecular Bioscience

**Faculty Advisers**
André O. Hudson, Michael A. Savka

**Description**
In the plant Dioscorea sp. “yellow yam,” we have identified and sequenced the genomes of three bacteria belonging to the genus Enterobacter. Preliminary analyses from the annotated genomes suggest that the bacteria possess genes involved in the production of secondary metabolites involved in plant resistance to pathogens in addition to genes involved in the production of hormones that have an integral role in plant growth and development.

#### Integrin Targeted Imaging of A549 Lung Cancer Cells

**Student Researchers**
Sean Aronow, BS, Biotechnology; Sarah Wang, BS, Biotechnology with Bioinformatics Option; Yin Peng Lee, BS, Biotechnology

**Faculty Advisers**
Irene M. Evans, Hans Schmitthenner

**Description**
The goals of this research are to assess the performance of new Targeted Molecular Imaging Agents (TMIs). Such dyes have a role in non-invasive imaging of cancers and can be useful for detecting cancer sites in the body.

#### Targeted Molecular Imaging Agents

**Student Researchers**
Taylor Barrett, BS, Chemistry; Chelsea Weidman, BS, Biochemistry; Stephanie Beach, BS, Chemistry; Lauren Heese, BS, Biochemistry

**Faculty Adviser**
Hans Schmitthenner

**Description**
Under Schmitthenner’s direction, the students conducted groundbreaking research on targeted molecular imaging agents, which allows medical professionals to easily distinguish cancerous cells from healthy cells and has applications in virtually every stage of cancer treatment, including early detection, diagnosis, surgery and recurrence checks. In early 2015, the researchers won a $440,000 grant from the National Institutes of Health for the development of a photoacoustic imaging component in collaboration with the University of Rochester.

---

**Summer Undergraduate Research**—A limited number of students are awarded undergraduate research fellowships each summer. Students are provided a stipend to work on a targeted research project for 10 weeks. The program culminates in the Summer Undergraduate Research Symposium, a free, public event showcasing the research undertaken by undergraduate students across the RIT campus.

**Research Experiences for Undergraduates (REUs)—**The National Science Foundation funds a large number of summer research opportunities for undergraduate students through its REU Sites program. Undergraduates apply to universities around the country to work in the research programs of the host institution. Students are associated with a specific research project, where they work closely with the host institution’s faculty and other researchers. REUs give students an opportunity to participate in research at other institutions, on exciting projects that may differ from RIT’s research initiatives.
Cooperative education

Today’s top employers are looking for ambitious graduates who have professional work experience in addition to a quality academic background. At RIT, you can get both. Cooperative education has been a hallmark at RIT for more than 100 years and is the centerpiece of RIT’s commitment to experiential education.

Cooperative education (co-op) provides an opportunity to put classroom lectures, textbook theories, laboratory research, and your personal initiative to the ultimate test—performance in the workplace. Hundreds of companies—from Fortune 500 firms to smaller, privately owned companies—come to campus each semester to recruit students for co-op positions. There’s no question that RIT’s cooperative education program provides you with a competitive advantage over science graduates from other colleges and universities. With the exception of bioinformatics, co-op is optional for students in the College of Science. In some programs, co-op can begin as early as the summer after your freshman year, but co-op typically takes place in your third and fourth years. You can alternate semesters of academic study with co-op work periods—full-time, paid work experiences in positions related to your major. RIT’s Office of Career Services and Cooperative Education will help you assess your career ambitions, identify opportunities, and assist you in the application process.

Study Abroad

There’s no better way to gain an understanding of another culture than to experience it firsthand. To prepare you for success in our global society, RIT offers a range of exciting study abroad opportunities that expand your horizons in every sense.

Explore Evolution on the Galapagos Islands

Robert Rothman, professor in the Thomas H. Gosnell School of Life Sciences, arranges an annual 12-day trip to the Galapagos Islands at the end of the spring semester. This year marks Rothman’s 23rd visit to the Pacific archipelago, located 600 miles off the coast of Ecuador. His trips share an appreciation for the wildlife and geology that informed Darwin’s theory of natural selection. In his class, “Galapagos: Evolution and Ecology,” Rothman’s lectures begin with Darwin and the voyage of the Beagle, and the role the Galapagos played in Darwin’s thinking about evolution. “In class we cover everything we’re going to see in the Galapagos,” he says. “We consider the geology and formation of the islands, the land and sea birds, and the reptiles. We go over the history and human impact, and then we go see everything that we have been discussing all semester.”
Academic Enrichment Opportunities

Students at RIT have a wide range of academic options that will expand their educational experience. You can pursue a minor or immersion in a second area of science and mathematics, add a liberal arts or business minor to complement your studies, enroll in a study abroad program, or apply for admission to an accelerated BS/MS program.

The Honors Program
The Honors Program in the College of Science is a challenging, individualized experience for students who have demonstrated outstanding academic performance. Honors students have access to special courses, seminars, projects, and advising. Recent Honors students have received summer research stipends in environmental science and imaging science and have traveled to professional conferences in bioinformatics, chemistry, and biology.

Accelerated dual-degree options
If you’re looking for a way to further distinguish yourself from the crowd, you may want to consider one of RIT’s accelerated dual-degree options. These options allow you to earn both a bachelor’s and a master’s degree in less time than it would normally take to complete each degree separately. The College of Science has many options to choose from, each designed to give you an edge over the competition.

- BS in Applied Mathematics/MS in Applied and Computational Mathematics
- BS in Applied Statistics/MS in Applied and Computational Mathematics
- BS/MS in Bioinformatics
- BS in Chemistry/MS in Materials Science and Engineering
- BS in Computational Mathematics/MS in Applied Computational Mathematics
- BS/MS in Environmental Science
- BS in Physics/MS in Materials Science and Engineering

Minors and immersions
Minors and immersions can give you a secondary area of expertise or the chance to explore other areas of interest to you. They may complement your major, broaden your career options, or expand your personal interests. For the most current list of minors and immersions please visit rit.edu/minors and rit.edu/immersions.

RIT’s College of Science has a diverse, talented, and dedicated faculty numbering more than 160. A few are highlighted below.

Sophia Maggelakis
Dean; Professor in the School of Mathematical Sciences

Sophia Maggelakis has published more than 20 papers and is a winner of the Eisenhart Award for Outstanding Teaching. Maggelakis teaches courses in calculus, engineering mathematics, complex variables, differential equations, and mathematical modeling. She is also a mentor for the Women in Science, Engineering, and Mathematics group and gives motivational talks on mathematics to high school students.

Mishkat Bhattacharyya
Assistant Professor, School of Physics and Astronomy

Mishkat Bhattacharyya’s research has developed techniques for measuring mechanical rotation at the quantum level, while identifying and circumventing the limits placed by quantum mechanics on sensor capabilities. His research is expected to have a technological impact on society by taking rotation-sensor technology—like that used in cell phones, gyroscopes on ships and airplanes, and global positioning system satellites—to its limits. He is the recipient of the Faculty Early Career Development (CAREER) Program Award from the National Science Foundation, and plans to use the award’s funding to examine the continuing demand for better optical sensing of mechanical rotation devices used in fields such as nanoscience, precision measurement, remote sensing, and quantum computing.
Manuela Campanelli
Professor in the School of Mathematical Sciences

As the director of RIT’s Center for Computational Relativity and Gravitation, Manuela Campanelli caused an international stir in 2005 when she and two associates simulated the merging of two black holes on a supercomputer following Einstein’s theory of general relativity. Campanelli lectures worldwide and has published numerous articles on her research. In 2009, she received a Fellowship from the American Physical Society for her groundbreaking work on numerical simulations of binary black holes.

Elizabeth Cherry
Associate Professor in the School of Mathematical Sciences

Elizabeth Cherry is a member of a multidisciplinary National Science Foundation team that is developing the “Cyberheart” platform for virtual, patient-specific human heart models and associated device therapies. Cherry’s role is focused on the foundations of modeling, synthesizing, and developing medical device software and systems from closed-loop models of the device and organ. The project’s goal is to build safe and effective software for future medical devices.

Joe Hornak
Professor in the Chester F. Carlson Center for Imaging Science

Joe Hornak teaches courses in magnetic resonance imaging, nuclear magnetic resonance spectroscopy, analytical chemistry, and physical chemistry. He is also director of the Magnetic Resonance Laboratory. His research interests include multi-spectral tissue classification with magnetic resonance images, magnetic resonance hardware development, and magnetic resonance imaging of materials.

André O. Hudson
Associate Professor in the Thomas H. Gosnell School of Life Sciences

The research in André Hudson’s laboratory focuses on amino acid metabolism. Specifically, he is interested in amino-transferase class of enzymes, which are involved in the metabolism of amino acids in living organisms. The theme of his research program is to elucidate the function(s) of uncharacterized enzymes involved in amino acid metabolism. In addition, he is interested in structural biology as it relates to the three-dimensional structure of enzymes that are involved in amino acid metabolism.

Lea Vacca Michel
Assistant Professor in the School of Chemistry and Materials Science

Lea Vacca Michel collaborates with pediatrician Dr. Michael Pichichero at the Rochester General Hospital Research Institute to study the properties of protein vaccine candidates. Recently, her lab used a combination of structural and biochemical techniques to elucidate a novel orientation of one vaccine candidate from the pathogenic bacteria Nontypable Haemophilus influenzae (NTHi). Michel hopes that her work will contribute to the vaccine development process for protection against NTHi infections.

Carl Salvaggio
Professor in the Chester F. Carlson Center for Imaging Science

Carl Salvaggio is part of the Digital Imaging and Remote Sensing Laboratory, and has conducted research for the Central Intelligence Agency, the Department of Energy, and the Environmental Protection Agency. Salvaggio teaches courses in image processing and computer vision, remote sensing, and computing languages for imaging science students.

Michael Savka
Professor in the Thomas H. Gosnell School of Life Sciences

Michael Savka focuses his work on bioinformatics and has been working to develop “smart plants” that can detect and evade bacteria. Ultimately, he hopes his work will lead to improved corn, “the most important crop in the U.S.,” he says. Savka has received research grants from the U.S. Department of Agriculture’s National Research Initiative Competitive Grants Program.

George Thurston
Professor in the School of Physics and Astronomy

George Thurston works on the physics of biomolecular interactions in concentrated mixtures, like those that occur in living cells and tissues. His work is primarily focused on eye lens protein interactions that contribute to cataract, a leading cause of blindness worldwide. The principal tools are light, neutron, and X-ray scattering, statistical physics, and computer simulation, and the projects involve physicists, mathematicians, chemists, and biologists.
Facilities and Centers

World-class facilities

RIT and the College of Science host some of the most sophisticated, high-tech facilities in the world. Many of your classes will be taught in multimedia-supported classrooms and labs that allow the use of computer modeling, 3D imaging, and virtual reality for conducting experiments. You will find top-notch teaching and research laboratories—including an X-ray and surface science laboratory, an animal care facility, a plasma etching laboratory, an electronics laboratory, a confocal microscopy lab, and a nuclear magnetic resonance laboratory—computer centers, two statistical computing laboratories, a laser light scattering laboratory, a greenhouse, and dozens of community spaces for small-group study, projects, and informal gatherings. A selection of the college’s major facilities include:

Center for Advancing Science/Mathematics Teaching, Learning, and Evaluation
A network of affiliated faculty, projects, and programs engaged in scholarship surrounding science and math education.

Center for Applied and Computational Mathematics
Promotes interdisciplinary research with a particular focus on cultivating emerging applications in the sciences and engineering.

Center for Computational Relativity and Gravitation
A research center dedicated to study at the frontiers of numerical relativity and relativistic astrophysics, gravitational-wave physics, its connection to experiments and observations, and high-performance computation and scientific visualization.

Center for Detectors
Designs, develops, and implements new advanced sensor technologies through collaboration with academic researchers, industry engineers, government scientists, and university/college students.

Center for Materials Science and Engineering
Provides an integrated interdisciplinary approach to the study of materials.

Digital Imaging and Remote Sensing Laboratory
A research group focused on the development of hardware and software tools to facilitate the extraction of information from remotely sensed data of the earth and the education of students who will continue this work for government agencies and private industry.

Laboratory for Multiwavelength Astrophysics
A subset of the faculty, staff, and students from the School of Physics and Astronomy and the Chester F. Carlson Center for Imaging Science using data from multiwavelength sensors.

Magnetic Resonance Laboratory
A research and development laboratory devoted to solving real-world problems with magnetic resonance.

Multidisciplinary Vision Research Laboratory
Aims to further the understanding of high-level visual perception, how humans extract information from images and the environment, and how that information is used in decision-making and to guide actions.

Munsell Color Science Laboratory
A world-class academic laboratory dedicated to education, research, and outreach in the broad multidisciplinary field of color science.
FOUNDED IN 1829, Rochester Institute of Technology is a privately endowed, coeducational university with nine colleges emphasizing career education and experiential learning.

THE CAMPUS occupies 1,300 acres in suburban Rochester, the third-largest city in New York state. RIT also has international campuses in Eastern Europe and Dubai.

THE RIT STUDENT BODY consists of approximately 15,000 undergraduate and 2,900 graduate students. Enrolled students represent all 50 states and more than 100 countries.

RIT is an internationally recognized leader in preparing deaf and hard-of-hearing students for successful careers in professional and technical fields. The university provides unparalleled access and support services for the more than 1,200 deaf and hard-of-hearing students who live, study, and work with hearing students on the RIT campus.

RIT ALUMNI number more than 118,000 worldwide.

COORDERATIVE EDUCATION provides paid career-related work experience in many degree programs. RIT has the fourth-oldest and one of the largest cooperative education programs in the world, annually placing more than 4,100 students in more than 6,100 co-op assignments with more than 2,100 employers across the United States and overseas.

COLLEGES:
College of Applied Science and Technology
School of Engineering Technology
School of International Hospitality and Service Innovation
Saunders College of Business
B. Thomas Golisano College of Computing and Information Sciences
Kate Gleason College of Engineering
College of Health Sciences and Technology
College of Imaging Arts and Sciences
School for American Crafts
School of Art
School of Design
School of Film and Animation
School of Media Sciences
School of Photographic Arts and Sciences
College of Liberal Arts
National Technical Institute for the Deaf
College of Science
Other degree-granting academic units: Center for Multidisciplinary Studies; Golisano Institute for Sustainability

DEGREES: RIT offers the following degrees: doctoral (Ph.D.) programs in astrophysical sciences and technology, color science, computing and information sciences, engineering, imaging science, microsystems engineering, and sustainability; master’s degree programs: master of architecture (M.Arch.), master of business administration (MBA), master of engineering (ME), master of fine arts (MFA), master of science (MS), and master of science for teachers (MST); bachelor’s degree programs: bachelor of fine arts (BFA) and bachelor of science (BS); and associate degree programs: AS, AOS, AAS.

WALLACE LIBRARY is a multimedia center offering a vast array of resource materials. The library provides access to more than 250 electronic databases, 40,000 electronic journals, and more than 150,000 e-books. Resource materials also include audio, film, and video titles and more than 500,000 books and print journals.

HOUSING: Many of RIT’s full-time students live in RIT residence halls, apartments, or townhouses on campus. On-campus fraternities, sororities, and special-interest houses are also available. Freshmen are guaranteed housing.

STUDENT ACTIVITIES: Major social events and activities are sponsored by the College Activities Board, Residence Halls Association, sororities, fraternities, and special-interest clubs of many kinds. There are more than 300 clubs and student organizations on campus.

ATHLETICS: Men’s Teams—baseball, basketball, crew, cross country, ice hockey (Division I), lacrosse, soccer, swimming, tennis, track, and wrestling
Women’s Teams—basketball, crew, cross country, ice hockey (Division I), lacrosse, soccer, softball, swimming, tennis, track, and volleyball

RIT offers a wide variety of activities for students at all levels of ability. More than 50 percent of our undergraduate students participate in intramural sports ranging from flag football to golf and indoor soccer. Facilities include the Gordon Field House, featuring two swimming pools, a fitness center, indoor track, and an event venue with seating for 8,500; the Hale-Andrews Student Life Center, with five multipurpose courts, eight racquetball courts, and a dance/aerobics studio; the Ritter Ice Arena, and outdoor facilities including an all-weather track, tennis courts, and several athletic fields. The newly opened Gene Polisseni Center, which houses RIT’s new hockey arena accommodates 4,300.

EXPENSES: Full-time students living in an RIT residence hall have the following 2015-16 academic year expenses. We estimate that the typical student also spends an average of $2,025 per year for books, transportation, and personal expenses.

RIT does not discriminate. RIT promotes and values diversity within its workforce and provides equal opportunity to all qualified individuals regardless of race, color, creed, age, marital status, sex, gender, religion, sexual orientation, gender identity, gender expression, national origin, veteran status, or disability.

The Advisory Committee on Campus Safety will provide, upon request, all campus crime statistics as reported to the United States Department of Education. RIT crime statistics can be found at the Department of Education website, http://ope.ed.gov/security, and by contacting RIT’s Public Safety Department at 585-475-6620 (v/tty).
