MEMORANDUM

To: Gerard Buckley, Dean, NTID
From: Jeremy Haefner, Provost and Senior Vice President
Subject: AS Applied Science Concept Paper
Date: May 1, 2016
Cc: William Destler, Chris Licata

Dean Buckley:

On behalf of President Destler and myself, I thank you and your faculty for the work you all do for the university, particularly as it pertains to the development of new academic programs. We know how much time and effort goes into writing an academic program concept paper and even more goes into the construction of an academic program. We also know that approving an academic program is an extremely serious commitment that the campus undertakes and so making sure that our review and decision-making process is as stringent as possible is a priority for me.

So thank you for submitting the concept paper for a A.S. in Applied Science.

By way of context, it is important to understand the recent activity with regards to new programs here at RIT. An analysis of the new program activity found on the Academic Affairs Academic Program Management website (http://www.rit.edu/academicaffairs/academicprogrammgmnt/) indicate the following:

- Since 2012 (when the conversion moratorium was lifted), there have been 52 concept papers for certificate, bachelor, masters, or doctoral degree programs;
- Of those 52 concept papers, 11 (including yours) were submitted for approval this spring;
- Of the remaining 41 papers, 39 received an approval for further development;
- Of the 39, 20 have emerged as full proposals that are currently under consideration by NYSED for approval;
- Of the 20, 16 have been approved, are now operational, and all have appropriate resource demands; and
- Of the 16 operational, less than 40% are meeting their enrollment targets.
Also, if we look at the new program proposal trajectory prior to the moratorium (2007-2012), there were 29 additional new programs approved by NYSED during that time period alone.

Finally, there was a full proposal approved by the Academic Senate this year which is part of the spring approval process. And I anticipate at least one additional full proposal before the end of the year.

I am sure you will agree that RIT is creative, ambitious and agile when considering new programs.

Adding to the context is the exciting new RIT Strategic Plan “Greatness through Difference” which articulates a number of bold goals and objectives that will place RIT in the forefront of higher education. While many goals could and will shape and impact the future programs we add to the portfolio, there are some that stand out. First, there are several goals that will push the university to becoming first among private universities for the production of STEM graduates. We wish to be first among private universities for graduating the most number of women STEM graduates, AALANA male STEM graduates, and Deaf and Hard-of-hearing STEM graduates. Second, we wish to increase graduate student enrollments by 30% in a fiscally prudent manner. Finally, we wish to materially increase our student-centered research footprint. All of these aspirations require considerable resources and strategic decisions.

It is in this context that I met with the President, SVP Jim Watters and SVP Jim Miller to review program proposals.

With regards to your concept paper for an Applied Science A.S. program, President Destler did approve this concept to move forward to a full proposal with caveats. We agree that this program offers a good fit for the NTID students and the campus as a whole. We advise the faculty to discontinue old related programs that will confuse the marketplace and are no longer needed. Finally, we require that the start date be no earlier than a full academic year from the date of approval from NYSED.

Moving forward, we continue to encourage faculty to be creative and innovative with new academic program concepts. As general guidance, we suggest

• Undergraduate and graduate degree programs that have a minimum intake of 15 1st year students (not including transfers);
• Graduate degree programs that offer a non-thesis option so as to appeal to the student wanting to upgrade their skill set;
• A focus on degree programs that will materially allow the campus to reach its goals of being a leader in STEM degrees;
• Degree programs, particularly graduate degrees, that offer degree completion through a set of stackable certificates;
• Degree programs that can be offered online or in a competency-based format so as to reduce costs, particularly capital expenses; and
• A freedom to pursue innovative approaches to both content and delivery methods such as the micro masters degrees.

On behalf of RIT, I thank you for submitting this concept paper and the work that went into its development.

Sincerely,

Jeremy Haefner
Provost and Senior Vice President for Academic Affairs
