

CHECKING EXERCISE

A worksite inspection has taken place, and the inspection team has taken the following three pictures of items that need to be addressed. Using the questions from the inspection checklist (provided) fill out the inspection report to outline the *three most serious* hazards that are identifiable in the pictures. An example has been provided for you. Use the following hazard classifications in their appropriate column:

- A = Loss of life, body part, extensive damage
- B = Serious injury or property damage
- C = Non-disabling injury or minor damage

A. GENERAL WORK ENVIRONMENT

1. Are all worksites clean, sanitary, and orderly?
2. Are work surfaces kept dry or appropriate means taken to assure the surfaces are slip-resistant?
3. Are all spilled hazardous materials or liquids, including blood and other potentially infectious materials, cleaned up immediately and according to proper procedures?
4. Is combustible scrap, debris and waste stored safely and removed from the worksite promptly?
5. Is material on elevated surfaces piled, stacked or racked in a manner to prevent it from tipping, falling, collapsing, rolling or spreading?

B. WALKWAYS

1. Are aisles and passageways kept clear?
2. Are aisles and walkways marked as appropriate?
3. Are wet surfaces covered with non-slip materials?
4. Are holes in the floor, sidewalk or other walking surface repaired properly, covered or otherwise made safe?
5. Is there safe clearance for walking in aisles where motorized or mechanical handling equipment is operating?
6. Are materials or equipment stored in such a way that sharp projections will not interfere with the walkway?
7. Are standard guardrails provided wherever aisle or walkway surfaces are elevated more than 30 inches (76.2 centimeters) above any adjacent floor or the ground?
8. Are toeboards or guardrails installed around the edges of permanent floor openings or other similar areas where persons may pass below the opening ?

C. MACHINE GUARDING

1. Is all machinery and equipment kept clean and properly maintained?
2. Is sufficient clearance provided around and between machines to allow for safe operations, set up and servicing, material handling and waste removal?
3. Is equipment and machinery securely placed and anchored, when necessary to prevent tipping or other movement that could result in personal injury?
4. Is there a power shut-off switch within reach of the operator's position at each machine?
5. Are all pulleys and belts that are within 7 feet (2.1336 meters) of the floor or working level properly guarded?
6. Are all moving chains and gears properly guarded?
7. Are methods provided to protect the operator and other employees in the machine area from hazards created at the point of operation, ingoing nip points, rotating parts, flying chips, and sparks?
8. Are machinery guards secure and so arranged that they do not offer a hazard in their use?
9. If special handtools are used for placing and removing material, do they protect the operator's hands?

D. FLAMMABLE AND COMBUSTIBLE MATERIALS

1. Are combustible scrap, debris, and waste materials (oily rags, etc.) stored in covered metal receptacles and removed from the worksite promptly?
2. Is vacuuming used whenever possible rather than blowing or sweeping combustible dust?
3. Are firm separators placed between containers of combustibles or flammables, when stacked one upon another, to assure their support and stability?

INSPECTION REPORT

Date: _____

Inspection team: _____

Area: _____

	Inspection Checklist Question #	Hazard Classification	Finding
Example	D 1	C	Combustible scrap is not stored in a proper covered metal receptacle.
