Filter Use Case 7

Search Use Case 7

Global Search

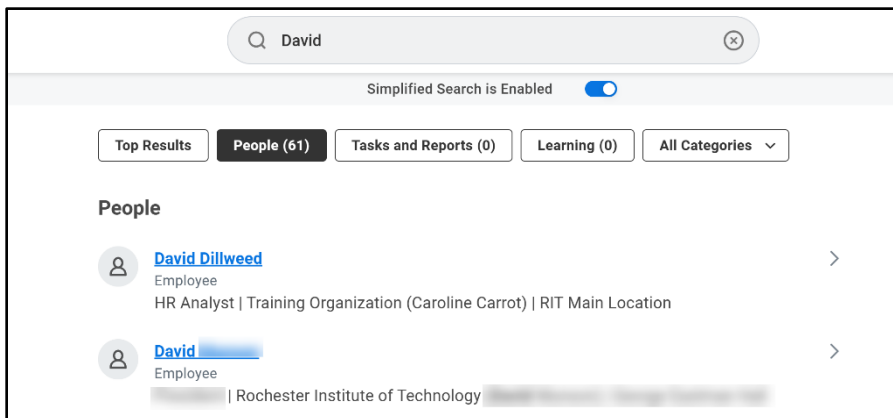

1. For example, to find an employee locate the **Search** bar at the top of your Workday homepage.

2. To find an employee, enter their name into **Search** bar, and then press enter.

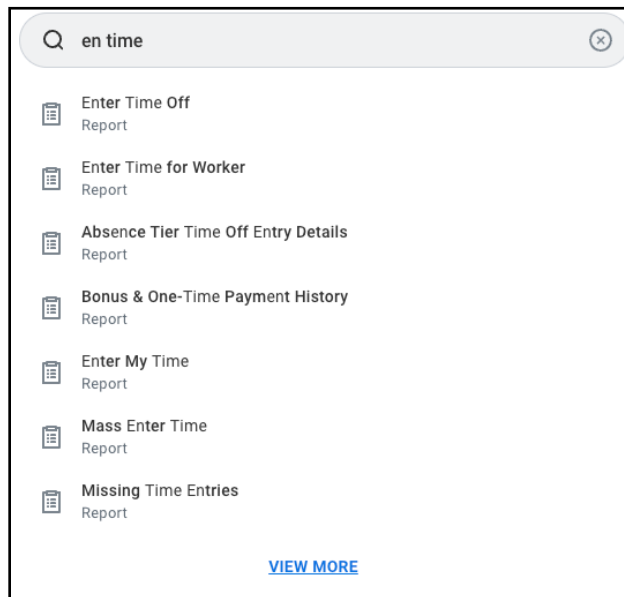

3. Search result options display across the top of the page as a group of filter buttons. Top results are returned based on your search terms. Navigate to People to filter the results to only display workers in your organization.

4. Use All Categories to filter your search for more specific results.
 - **Exact Match** - Keep in mind that searches find exact matches. If you misspell the search text, likely no results will return. Workday Search also favors complete word matches over partial word matches, so that search results match the term you enter more closely. If you search using partial names or terms, the results may not display partial matches, depending on data volume. For example, if you search for "Alex," the results may not display the name "Alexander."
 - **Partial Search** - Though complete word matches are favorable; you can also use a partial search to find your results. For example, if you want to find the Maintain Candidate List Assignment task, you can use the search string "main can lis". Though this method is still effective, it may not be the best practice for all search types where Workday returns multiple results.

- **Prefixes** - Search prefixes restrict the search results to a particular type of Workday object. Search prefixes are lowercase letters, followed by a colon (:). For example, “bp:” returns all business process definitions. To return a list of all search prefixes available to you, enter a question mark (?) in the Search box and then press Enter.
- **Auto Suggest** - Global Search Auto-Suggest displays suggested results as the first type-ahead result. It also displays loading animations when type-ahead is fetching results. To view all results, select the View More button on the search results page, as shown in the image below.

- **Recent Searches** - Workday saves your recent search results and queries for convenience, as shown in the image below. The five most recent searches display, helping you access these items faster. You can clear the results by selecting Clear in the Search box pull-down.
- **Search Categories** - Workday enables you to use categories to search for specific items and filter results, reducing the number of out-of-context search results. If a user does not have security access to a particular category, Workday will not list the category in the Search box pull-down. Also, the search categories are not configurable. Selecting a category adds the option to the Search box as a search criterion. This added search criteria filters search results, as shown in the image on the next page.

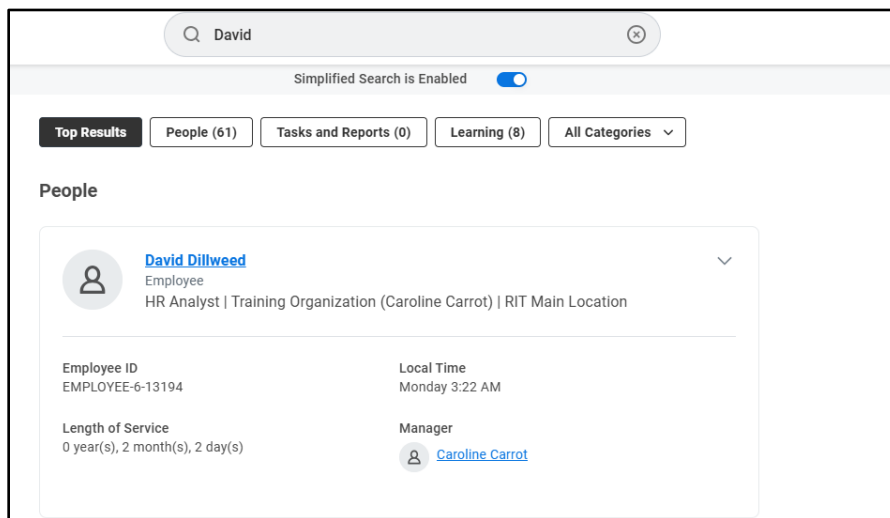

The screenshot shows the Workday Search interface. At the top is a search bar with a magnifying glass icon. Below it is a section titled "Recent Searches" with a "Clear" link. The recent searches list includes: "Create Candidate Pool", "View Candidate Pool", "david delgado", "View External Career Site", and "External Career Site Analytics". Below the recent searches is a section titled "I'm looking for..." with four category buttons: "People", "Tasks and Reports", "Learning", and "Drive".

- Additionally, users can add a search category to the Search box by keying the category name followed by a colon (:). Workday adds used categories to the Recent Searches result. More customized search options are available. From the All-Categories filter, select the Edit Categories Preferences button to configure search category results.

The screenshot shows the "Edit Category Preferences" dialog box. On the left is a list of categories with their counts: "People (0)", "Tasks and Reports (12)", "Articles (35)", "Learning (47)", "Staffing (0)", "Projects (0)", "Assets (0)", "Banking and Settlement (0)", and "Expenses (0)". At the bottom of this list is a button labeled "Edit Category Preferences" with a gear icon. On the right is the "Edit Category Preferences" panel. It has a title bar with a close button. Below the title is a subtitle: "Use drag and drop to customize your pinned search categories". There are two sections: "Pinned Categories (minimum of 1)" and "Unpinned Categories". The "Pinned Categories" section lists: "People", "Tasks and Reports", "Articles", and "Learning". The "Unpinned Categories" section lists: "Staffing", "Projects", "Assets", "Banking and Settlement", and "Expenses".

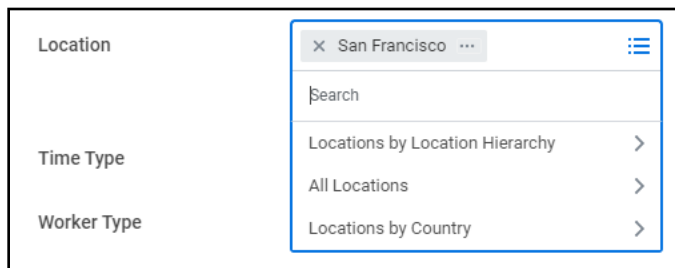

Workday Search

1. You can quickly find an active worker in global search, reports, and prompts. From the Search box, you can search for a worker by first name only. Workday sorts the results by relevance, first showing all workers with a matching first name.
2. After searching for a worker, their photo, business title, supervisory organization, and location display. This identifying information makes it easy to confirm you have found the correct person, as shown in the image below.

Prompt Search

1. With Prompt Search, you can easily search directly in a prompt, as shown in the image below.

2. There are two ways to use this search type:
 - Use the hierarchy provided in the prompt until you find what you are looking for.
 - Enter a search term and the system searches against the data that is applicable to that selection.
3. To make searches most effective:
 - Use specific searches, like global search.
 - Avoid general terms such as “find” and “work.”
 - Search for custom IDs, available to power users, for the quickest results.
 - Use the first two letters to jump directly to the results and then press Enter on your keyboard.

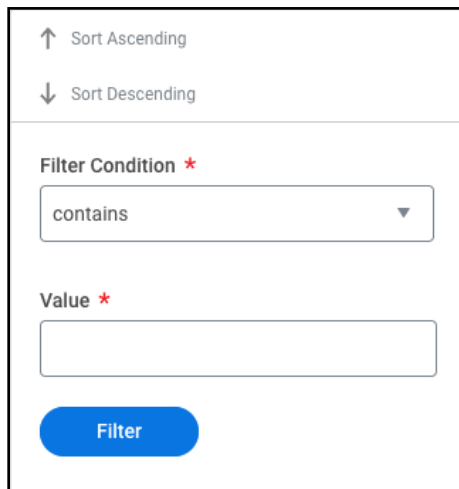

Selecting anywhere outside of the prompt deletes the search.

Search Reports

There are two main use cases for using Search Report: a **Filter Use Case** and a **Search Use Case**.

Filter Use Case

Use the filter functionality when you want to find something manually. For example, if you are searching for a specific inventory item, you can use the filter to narrow the search by manufacturer. Then, filter by part type to further reduce results, as shown in the image below.

The screenshot shows a filter configuration panel. At the top, there are two sorting options: 'Sort Ascending' with an upward arrow and 'Sort Descending' with a downward arrow. Below these is a section titled 'Filter Condition' with a red asterisk. It contains a dropdown menu currently set to 'contains'. Underneath is a section titled 'Value' with a red asterisk, followed by an empty text input field. At the bottom of the panel is a blue button labeled 'Filter'.

Search Use Case

If you only have a general idea of what you are looking for, use Find reports to help you narrow down your search. For example, if you are looking to fill an open position with someone internally and they need to meet specific criteria, use the Find Workers report. You can search for employees by city, skillset, cost center, and so on. You can also use the search field within the report to tailor your search results using different types of search methods.

These include:

- Boolean search – (sales OR marketing) AND manager
- Phrase search – “marketing manager”
- Exact Match – specificmail@workday.com

You can save faceted searches for later use, as shown in the image on the next page.
