1 What courses should I take?

Students who entered Fall 2020: your academic advisor created your fall schedule, taking into consideration any transfer/AP/IB credit and what the degree requirements are. If you have questions or concerns about your fall schedule, please contact your advisor before the end of the add/drop period.

Students who entered RIT before Fall 2020: you need to follow your program worksheet or flowchart along with your Academic Advising Report (AAR) in SIS.
2 IGM students taking (or who will take) 101, 102, 201 and 202

The following IGM classes, IGME-102, IGME-201, and IGME-202, have grade pre-requisites which SIS shows. If you earn a D or lower in a course that is a pre-requisite to one of those courses, you must retake the pre-requisite course. Here are the complete grade pre-requisites:

- If you earn a grade of D or lower in IGME-101, you cannot take IGME-102.
- If you earn a grade of D or lower in IGME-102, you cannot take IGME-201
- If you earn a grade of D or lower in IGME-102, you cannot take IGME-202.
- Please check with your academic advisor if you have any questions.

3 How do I search for courses?

Searching for all courses: see https://sis.rit.edu or https://tigercenter.rit.edu. All courses are coded with 4 letter subject codes. Courses offered by IGM are listed as IGME courses.

Arts & Science Perspectives and Wellness/Activity options: To search for these courses please follow these instructions:

2. Select Student Info System.
3. Click on the Enroll and Search tile.
4. Click the Class Search and Enroll link on the left.
5. Select the appropriate Term you wish to look for courses.
6. Click Additional ways to search
7. In the box that appears, scroll to Search Class Attributes
   a. For Perspectives: Click on the arrow and select GE: <perspective>
   b. For Wellness/Activity options: Click on the arrow and select Activity Course
8. Click Search. This list displays all scheduled open and closed options.
9. You can narrow down with options displayed on the left side of the screen.
10. Click on the course tile to see available sections, the course description, and additional enrollment information.

Swap feature: You have the ability to instruct SIS to drop you from an enrolled class and enroll you in a waitlisted class by utilizing the swap feature. The swap must be set up at time of enrollment. For more information: https://www.rit.edu/sistraining/sites/rit.edu.sistraining/files/files/Swapping%20Classes.pdf

Tiger Center: A class search tool developed by RIT students in partnership with ITS is available. You cannot enroll in classes using Tiger Center. https://tigercenter.rit.edu/tigerCenterApp/landing#/index

4 Co-op and Career Skills Preparation (IGME-99)

This course targets, and is required for, second-year students. This course helps students prepare for co-operative education employment (“co-op”) by developing job search strategies and material. Students will explore current and emerging aspects of IGM fields to help focus their skill development strategies. Students are introduced to RIT’s Office of Cooperative Education and Career Services, and learn about professional and ethical responsibilities for their co-op and subsequent professional experiences. Students will work collaboratively to build résumés and digital portfolios, and to prepare for interview situations.

The course will be offered online asynchronously. Students can enroll through SIS.
5 IGME Fall Semester core course descriptions

5.1 Reminders

These courses are offered in Fall semester and are required (eventually) of all NMID majors. They are listed in numerical order. Any prerequisites for a course are listed in parentheses.

The courses listed in italics are required core course for NMID students who entered RIT in the fall 2017 semester or later.

5.2 Descriptions

IGME-99 Co-op Preparation Workshop (0 credits):
This course helps students prepare for co-operative education employment (“co-op”) by developing job search strategies and material. Students will explore current and emerging aspects of IGM fields to help focus their skill development strategies. Students are introduced to RIT’s Office of Cooperative Education and Career Services, and learn about professional and ethical responsibilities for their co-op and subsequent professional experiences. Students will work collaboratively to build résumés and digital portfolios, and to prepare for interview situations.

The course will be offered online asynchronously. Students who started in New Media Interactive Development in fall 2015 and later are required to take this course. Ideally, a student will take this course in their second year. Students can enroll in the class through SIS. This class covers the mandatory co-op orientation normally held for IGM students.

NMDE-111 New Media Design Digital Survey (3 credits): This project-based course is an investigation of the computer as an illustrative, imaging, and graphical generation tool. It develops foundational design skills in raster and vector image creation, editing, compositing, layout, and visual design for online production. Emphasis will be on the application of visual design organization methods and principles for electronic media. Students will create and edit images, layouts and typography to form effective design solutions for online delivery. (None)

NMDE-112 New Media Design Digital Survey II (3 credits): Through formal studies and perceptual understanding, including aesthetics, graphic form, structure, concept development, visual organization methods and interaction principles, students will design graphical solutions to communication problems for static and interactive projects. Students will focus on creating appropriate and usable design systems through the successful application of design theory and best practices. Assignments exploring aspects of graphic imagery, typography, usability and production for multiple digital devices and formats will be included. (None)

IGME-101 New Media Interactive Design and Algorithmic Problem Solving I (4 credits): This course provides students with an introduction to problem solving, abstraction, and algorithmic thinking that is relevant across the field of new media. Students are introduced to object-oriented design methodologies through the creation of event-driven, media-intensive applications. Students will explore the development of software through the use of a range of algorithmic concepts related to the creation of applications by writing classes that employ the fundamental structures of computing, such as conditionals, loops, variables, data types, functions, and parameters. There is an early emphasis on object oriented concepts and design. (None)
IGME-599-01* Independent Study for New Media Interactive Design and Algorithmic Problem Solving II (4 credits): This course provides students a continued introduction to problem solving, abstraction, and algorithmic thinking that is relevant across the field of new media. As the second course in programming for new media students, this course continues an object-oriented approach to programming for creative practice. Topics will include re-usability, data structures, rich media types, event-driven programming, loaders, XML, object design, and inheritance. Emphasis is placed on the development of problem-solving skills as students develop moderately complex applications. (C- or better in IGME-101 New Media Interactive Design and Algorithmic Problem Solving I)

*Please contact your advisor regarding enrollment in this course.

IGME-110 Introduction to Interactive Media (3 credits): This course provides an overview of media in historical, current and future contexts. Incorporating lectures and discussion with hands on work involving written and interactive media assets, students examine the role of written and visual media from theoretical as well as practical perspectives. The course also provides an introduction to interactive media development techniques, including digital media components and delivery environments. Students will be required to write formal analysis and critique papers along with digital modes of writing including collaborative editing and effective presentation design. (None)

IGME-201 New Media Interactive Design and Algorithmic Problem Solving III (3 credits): This is the third course in the software development sequence for New Media Interactive Development students. Students further their exploration of problem solving and abstraction through coverage of topics such as GUI development, events, file I/O, networking, threading, and other advanced topics related to the design and development of modern dynamic applications. Programming assignments are an integral part of the course. (C- or better in IGME-102 New Media Interactive Design and Algorithmic Problem Solving II)

IGME-202 Interactive Media Development (3 credits): In this course, students will learn to create visually rich interactive experiences. It is a course in programming graphics and media, but it is also a course on the relationship between ideas and code. Students will explore topics in math and physics by building programs that simulate and visualize processes in the natural world. Assignments will include major programming projects, such as building a virtual world inhabited by digital creatures that display observable behaviors. (C- or better in IGME-201 New Media Interactive Design and Algorithmic Problem Solving III or IGME-106 Game Development and Algorithmic Problem Solving II or IGME-206 Game Development for Programmers & MATH-185 Math of Graphical Simulation I)

IGME-235* Introduction to Web Technology for Game Developers (3 credits): This course introduces web technologies commonly used in the production and distribution of both content focused web sites, and in the creation of interactive applications and games. Students will create web sites and web-native interactive experiences, and publish them to the web. Programming projects are required. (IGME 106 Game Development and Algorithmic Problem Solving II or IGME 206 Game Development for Programmers or IGME 102 New Media Interactive Design and Algorithmic Problem Solving II. Students may not take and receive credit for IGME-230 and IGME-235. If you have earned credit for IGME-230 or you are currently enrolled in IGME-230 you will not be permitted to enroll in IGME-235.)*

*You may take IGME-235 in place of IGME-230.

IGME-236 Interaction, Immersion, & the Media Interface (3 credits): This course examines the concepts of interface and interaction models in a media-specific context, with particular emphasis on the concept of the immersive interface. This course explores concepts such as perception, expectation, Gestalt Theory, interactivity, Semiotics, presence, and immersion in the context of media application development and deployment. In addition, underlying concepts of cognitive psychology and cognitive science will be
integrated where appropriate. These theories are then integrated in the exploration of the immersive interface, and with related concepts such as user-level-interface modification, augmentation of identity, and the interface as a social catalyst. (IGME-102 New Media Interactive Design and Algorithmic Problem Solving II or IGME-106 Game Development and Algorithmic Problem Solving II or IGME-206 Game Development for Programmers, and IGME-110 Introduction to Interactive Media)

**IGME-330 Rich Media Web Application Development I** (3 credits): This course provides students the opportunity to explore the design and development of Media Rich Internet Applications (MRIAs). This course moves beyond client and server side web development, and explores issues of presentation, interactivity, persistence, and extensibility common among such applications. Specifically, items explored include framework characteristics, data management, persistence, data binding, information manipulation, as well as data presentation. (IGME-230 Website Design & Implementation)

**IGME-340 Multi-Platform Media Application Development** (3 credits): This is a required core course for students who entered RIT in the fall 2171 semester and later.

Interactive media applications are no longer restricted to personal computers. They can now be found on many distinct hardware platforms including mobile, tablet, wearable, and large-screened computing devices. In this course, students will learn to design, prototype and develop media rich interactive experiences that can be deployed to a wide variety of hardware devices. Programming projects are required. (IGME-330 Rich Media Web Application Development I)

**IGME-430 Rich Media Web Application Development II** (3 credits): This is a required core course for students who entered RIT in the fall 2171 semester and later.

This course provides students the opportunity to continue the exploration of Media Rich Internet Applications (MRIAs). Topics include communications for media ecologies, distributed web application frameworks, advanced interactivity, data transformation, representation, automation, persistence, and large scale systems deployment. In addition, students are exposed to concepts and technologies related to the next generation of MRIA development. (IGME-330 Rich Media Web Application Development I)

**IGME-470 Physical Computing and Alternative Interfaces** (3 credits): This is a required core course for students who entered RIT in the fall 2171 semester and later.

The rich variety and widespread adoption of gestural touch screens, motion-sensing devices, weight-reactive surfaces, wearable digital devices, and similar interface products demonstrates the demand for well-integrated devices and services that seamlessly couple people and environments. Such products can interface computers with real-world inputs and outputs, and give people new ways of controlling and experiencing their devices and information. This course provides a rapid technical introduction to basic electronics (components, circuits, microcontrollers, etc.) and emphasizes the application of interface design concepts to physically interactive and innovative product development. The course requires solo and team projects that blend electronics, programming, and design. (Third-year standing and IGME-102 New Media Interactive Design and Algorithmic Problem Solving II or IGME-106 Game Development and Algorithmic Problem Solving II or IGME-206 Game Development for Programmers).

**IGME-480 Current Topics in Interactive Development** (3 credits): This is a required core course for students who entered RIT in the fall 2171 semester and later.

Interactive media development is a rapidly evolving field. This course provides an opportunity for students to learn and experiment with emerging themes, practices, and technologies that are not addressed elsewhere in the curriculum. Topics covered in this course will vary based on current developments in the field. Students will explore, design, and develop creative interactive experiences pertaining to the semester's
domain area. Programming projects are required. (IGME-330 Rich Media Web Application Development I)

NMDE-401 New Media Design Capstone I (3 credits): This course should be taken immediately prior to IGME-588 New Media Team Project in the last full year of the NMID program. This course is ONLY offered in the fall semester.

This course will focus on individual career preparation through topics such as resume development, job research, interviewing best practices, and creating or refining an online portfolio. Additional exploration and overviews will include the business aspects, practices, and workflows of the new media industry with a focus on designer/developer/client relationships. Students will integrate project workflows, management, team building, concept generation and prototyping through small team projects, and project research for New Media Team Project.

6 New Media Interactive Development Advanced Elective Courses.

6.1 Policies

These courses are advanced elective options for all NMID majors.

IGM EXPECTS that at least 50% of your Advanced Electives come from IGM. The courses that are currently on the schedule for the current semester are noted below, but we expect that the list of available courses from IGM will continue to grow.

If you would like to take a non-IGM course and have it count as an Advanced Elective, please note the following:

- At least 50% of your Advanced Electives must come from IGM.
- For a course outside of IGM to be considered an Advanced Elective, it should come from the College of Computing and Information Sciences (GCCIS) and/or the College of Imaging Arts and Sciences (CIAS).
- The course should be a 200-400 level course (CIAS) or a 300-400 level course (GCCIS) and have at least one pre-requisite requirement(s) to take the course
- You will also need permission to take a non-IGM course and have it count as an Advanced Elective. IGM permission is required. You should contact your Academic Advisor if this is an option that you would like to pursue. If the course cannot be counted as an Advanced Elective, it may be possible to have it count as a General Education or Free Elective; again, this is something that your Academic Advisor can assist you with.

Advanced Elective courses are listed in numeric order. Any prerequisites for a course are listed in parentheses.

6.2 Descriptions

IGME-119 2D Animation & Asset Production (3 credits): This course provides a theoretical framework covering the principles of animation and its use in game design to affect user experience. Emphasis will be placed upon principles that support character development and animations that show cause and effect. Students will apply these principles to create animations that reflect movement and character appropriate for different uses and environments. (IGME-110 Introduction to Interactive Media)
IGME-219  3D Animation & Asset Production (3 credits): This course provides an overview of 3D game asset production. Basic ideas learned within the first asset production course are also revisited within the 3D environs. Topics covered include modeling, texturing, skinning and animation. Emphasis is put on low polygon modeling techniques, best practices in game art production, and effective communication strategies between artists, programmers, and designers. (IGME-119 2D Animation & Asset Production)

IGME-220  Game Design & Development I (3 credits): This course examines the core process of game design, from ideation and structured brainstorming in an entertainment technology context through the examination of industry standard processes and techniques for documenting and managing the design process. This course specifically examines techniques for assessing and quantifying the validity of a given design, for managing innovation and creativity in a game development-specific context, and for world and character design. Specific emphasis is placed on both the examination and deconstruction of historical successes and failures, along with presentation of ethical and cultural issues related to the design and development of interactive software and the role of individuals in a team-oriented design methodology. Students in this class are expected to actively participate and engage in the culture of design and critique as it relates to the field. (GAMEDES-BS and NWMEDID-BS students in year levels 2-5).

IGME-320  Game Design & Development II (3 credits): This course continues to examine the core theories of game design as they relate to the professional field. Beginning with a formalized pitch process, this course examines the design and development paradigm from storyboarding and pre-visualization through rapid iteration, refinement, and structured prototyping exercises to further examine the validity of a given design. Specific emphasis is placed on iterative prototyping models, and on methodologies for both informal and formal critique. This course also explores production techniques and lifecycle in the professional industry. (IGME-202 Interactive Media Development and IGME-220 Game Design & Development I)

IGME-382  Maps, Mapping and Geospatial Technologies (3 credits): This course provides a survey of underlying concepts and technologies used to represent and understand the earth, a form of new media collectively referred to as Geospatial Technologies (GTs). Students will gain hands-on experience with GTs, including Global Positioning Systems (GPSs), Geographic Information Systems (GISs), remote sensing, Virtual Globes, and geographically-oriented new media such as mapping mashups. Students also will develop basic spatial thinking, reasoning, problem solving, and literacy skills.

IGME-386  Spatial Algorithms and Problem Solving (3 credits): This course is targeted to students with a serious interest in geographical problem solving via underlying spatial algorithms. Students will learn how to compare and contrast different specific spatial algorithms for solving specific geographic problems and develop proficiency with encoding and implementing spatial algorithms in computer programs. Students taking this course will gain a broad interdisciplinary skill set in how to think spatially and computationally through critical engagement of geographical problem solving.

IGME-420  Level Design (3 Credits): This course introduces level design theory and best practice through game level analysis, evaluation, and creation. Students will learn by analyzing game levels from existing games and discussing what made those levels successful or unsuccessful. Through their analysis and hands on experience, students will gain an understanding of overall level design including layout, flow, pacing, and balance. They will enhance their understanding of level design principles by creating their own game levels. (IGME-219 2D Animation and Asset Production and IGME-220 Game Design & Development I).

IGME-423  Games for Change (3 credits): This course provides students with the opportunity to explore games and simulations for social change and learning. Students will explore various research, design, and development techniques for applying games to addressing issues and problems in communities,
from local to global. Students will learn to design and develop games and simulations as well as how to
gather and analyze data about the games’ usage. Topics may include issues-based organizing and advocacy,
place-based learning, and games for civics. In addition, students are exposed to current debates in the field
of Games for Change. (IGME-220 Game Design and Development I)

IGME-450  Casual Game Development  (3 credits): This course explores the design and construction
of casual game experiences. Topics include modes of casual game play, mechanics for casual games,
characteristics of successful games, development processes, and the distribution of casual games. Students
will create casual games, and employ technologies to address issues of scalability, presentation, social
interconnectivity, and game analytics. (IGME-330 Rich Media Web Application Development I for
NWMEDID-BS students; IGME-320 Game Design and Development II for GAMEDES-BS students)

IGME-460  Data Visualization  (3 credits): Our world is flooded with data, and making sense of it can
be a challenge. Visualizations help by exposing information, trends, and correlations that might otherwise
go unnoticed in the raw data. In this course, students will learn to collect, clean, organize, and filter data sets
of their own choosing. They will learn and apply principles from multiple fields including visual design,
the psychology of perceptions, user experience design, and ethics. They will create static and interactive
visualizations with a variety of information structures (hierarchies, maps, timelines, etc). Students will learn
to develop exploratory experiences that tell the “story” within the data. Programming projects are required.
(IGME-330 Rich Media Web Application Development I)

IGME-529  Foundations of Interactive Narrative  (3 credits): This course focuses on the major
elements of narrative for interactive environments. Students in this course explore the basics of narrative
in the context of interactive games and media, with examination of digital storytelling in games and
interactive environments of several varieties. Branching narrative, hypertext, multi- and non-linear
concepts are also explored with an emphasis on balancing immersive and interactive aspects of digital
narrative. (IGME-202 Interactive Media Development)

IGME-580 Production Studio  (3 credits): This course will allow students to work as domain specialists
on teams completing one or more large projects over the course of the semester. The projects will be
relevant to experiences of the interactive games and media programs, but will require expertise in a variety
of sub-domains, including web design and development, social computing, computer game development,
multi-user media, human-computer interaction and streaming media. Students will learn to apply concepts
of project management and scheduling, production roles and responsibilities, and their domain skill sets to
multidisciplinary projects. Students will complete design documents, progress reports and final
assessments of themselves and their teammates in addition to completing their assigned responsibilities on
the main projects. (IGME-330 Rich Media Web Application Development I for NWMEDID-BS students;
IGME-320 Game Design and Development II for GAMEDES-BS students)

IGME-590-02 Undergraduate Seminar in Game Mod Design and Development  (3 credits): This class
will explore the structures and content of a AAA game through game modification. Using existing game
content and creation kits, students will develop content that could include new in-game objects, NPCs,
environments, and quest lines. This modded content will be designed and tested by students to ensure
seamless integration with the existing game. This class will be co-taught by two instructors of varied
backgrounds. (Recommended for students with minimum third-year standing in computing or digital
content creation majors.)

IGME-590-03 Undergraduate Seminar in Game Balance  (3 credits): This course is an in-depth
exploration of the sub-field of game design known as balance. Topics include: transitive mechanics and
cost/power curves; economic systems in games; probability and the psychology of randomness;
pseudorandom numbers; situational balance; level/XP curves, advancement and pacing; tuning; statistics,
metrics, and analytics; intransitive mechanics, game theory, and payoff matrices; and the applied use of spreadsheets. (IGME-220 Game Design and Development I)

**IGME-624-Tabletop RPG Design** (3 credits): This course explores the concepts and mechanics of analog role-playing games, such as tabletop "pencil-and-paper" and live-action role-playing games, from a practical, hands-on perspective. In this project-based course, students will develop their own rule systems to facilitate various facets of role-playing and associated game mechanics, then playtest and publish their games. Students will also use desktop publishing tools to produce game rules and supplemental materials suitable for publication. Note that this course assumes that students have extensive experience in playing tabletop role-playing games. (IGME-220 Game Design and Development I)

**IGME-670 Digital Audio Production** (3 credits): Technologies and techniques for producing and manipulating digital audio are explored. Topics include digital representations of sound, digital audio recording and production, MIDI, synthesis techniques, real-time performance issues, and the application of digital audio to multimedia and Web production. (IGME-202 Interactive Media Development. Undergraduate students may not take and receive credit for this course if they have already taken IGME-570.)

### 7 IGM Undergraduate Advanced Elective Project Classes

IGM offers a variety of project-based classes (e.g., Production Studio, Research Studio, and others) in addition to regular courses and seminars that often have term projects. The table below summarizes common project courses. Note that project courses provide an excellent opportunity for developing your portfolio and improving in your skills in a variety of areas. By planning ahead and obtaining instructor approval, students could connect/extend project work through many classes, which would potentially add significant polish.

<table>
<thead>
<tr>
<th>Class</th>
<th>Title</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IGME-499</td>
<td>Undergraduate Co-op</td>
<td>If you are on co-op, you must not double-count that work for course credit. RIT requires this distinction when working on a project: pay or credit but not both. For example, if you are working with a professor on a co-op, and that project that has some components happening in Production Studio, you must not enroll in that class.</td>
</tr>
<tr>
<td>IGME-580</td>
<td>Production Studio</td>
<td>Student teams pitch projects to the instructor. Upon approval, students step through the production process to complete their project. This course is flexible and provides an ideal opportunity to develop your expertise, skills, and professional project portfolio. See Research Studio (IGME-589) for professor-generated projects. See also the FAQ below.</td>
</tr>
<tr>
<td>IGME-581</td>
<td>Innovation &amp; Invention</td>
<td>“I&amp;I” fosters teamwork for new ideas, not pre-existing projects, across the campus. Although you can use Production Studio to explore new development, you may want to consider I&amp;I.</td>
</tr>
<tr>
<td>IGME-585</td>
<td>Project in FOSS Development</td>
<td>This course is similar to other IGM project courses. However, students focus on the FOSS movement and particular software development practices.</td>
</tr>
<tr>
<td>IGME-588</td>
<td>New Media Team Project</td>
<td>NMID students take this course in their senior year. GDD students are sometimes invited to join the team. This course provides an excellent opportunity to collaborate with New Media Design majors in the design and development of a large-scale project.</td>
</tr>
<tr>
<td>IGME-589</td>
<td>Research Studio</td>
<td>The students work as domain specialists on teams completing one or more faculty research projects during the semester. The faculty member teaching the class will provide the research topic(s). (In IGME-580, the students generate the project ideas.) Students will learn about research methodology to implement, test, and evaluate results of projects. Students will complete research reports and final assessments of themselves and their teammates in</td>
</tr>
</tbody>
</table>
addition to completing their assigned responsibilities on the main projects. See also the FAQ below.

<table>
<thead>
<tr>
<th>IGME-599</th>
<th>Independent Study</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Use this course to pursue something more research-oriented, especially for concepts not explored in-depth in any undergraduate RIT course. You need to contact a professor with a proposal. See also the FAQ below.</td>

### 7.1 Course Listings

Enrollment guides, which are posted along with this document

https://sis.rit.edu – click on “SIS Course Catalog Search”

https://www.rit.edu/upub/pdfs/Undergrad_Course_Descriptions.pdf

### 7.2 Production/Research Studio FAQ

#### Enrollment Requirement

This course is restricted to students in NWMEDID-BS or GAMEDES-BS with at least 3rd year standing. If you have team members working on your project from outside IGM, please have them fill out the form at “Course Request form for Non IGM Majors…” from

https://www.rit.edu/computing/computing/school-interactive-games-and-media/resources/academic-advising#important-documents

#### How many times can I take Production/Research Studio?

You can take it as many times as you want as an undergraduate student.

#### How many studios will count toward Advanced Electives?

Students can take any combination of 2 Production and/or Research Studios to count towards their advanced electives (ex: 2 Production Studios, 2 Research Studios, 1 Research Studio and 1 Production Studio). A student may choose to take additional Production and/or Research Studios, but these would count towards their Free Electives.

#### What projects can I work on?

In IGME-580 Production Studio, students pitch the projects.
In IGME-589 Research Studio, instructors pitch the projects.

### 7.3 Independent Study FAQ

#### This course seems a lot like Production/Research Studio.

You are correct! In most cases, students should take one of the “studios.” However, when you have a topic you’d like to research or a skill you’d like to develop, an independent study (IS) is a good option. For example, a NMID student might want to study wearable computing, or a GDD student might want to explore networking in more detail. The main restriction is that there is no comparable IGM class.

#### How do I find/generate an Independent Study?

Unless a faculty member specifically advertises an IS, the work is up to you to find a faculty member, pitch the idea, and develop the proposal. Planning ahead by taking classes, visiting office hours, reading Insights, and talking with your faculty and academic advisors will help.

#### Is there a form?

You can obtain the form from a faculty member or your advisor.
Who fills out the form?
Both you and the faculty sponsor. Once your sponsor has obtained the form, please collaborate to fill in the required information. The form has additional instructions. Once complete, the faculty sponsor or the student will bring the completed application to the IGM office for approval from our Undergraduate Coordinator.

Can I do an IS from outside of IGM?
Yes, but you must check with your academic advisor in advance to determine if the course will count as an advanced elective (assuming you want it to).

8 Who to Contact?
If you have any questions regarding what you read in this enrollment guide, or for any other reason, please contact your Academic Advisor ASAP.

IGM Advising:

Jeff Spain  Last Names A – F  jeffspain@rit.edu
Kara Griffith  Last Names G – Mh  kara.griffith@rit.edu
Kathleen Schreier Rudgers  Last Names Mi – V  kmsrla@rit.edu
Jennifer Frantz  Last Names W – Z  jennifer.frantz@rit.edu

Walk-in hours for the fall semester will be held virtually via Zoom. You can also schedule a phone or online appointment via Starfish. More information about this can be found here: https://www.rit.edu/computing/computing/school-interactive-games-and-media/resources/academic-advising
