Cybersecurity Bootcamp

Global Cybersecurity Institute’s Cybersecurity Bootcamp is an immersive 15 week hands-on training course.

You will learn the basics of IT, Operating Systems, and Networking throughout the work week. Through hands-on projects and labs designed to transform knowledge into high-demand security skills, you will rapidly prepare for your career transition.

What you will gain

Real-world experience.

Professional Certificate that you can put on your resume.

Job placement and search assistance with RIT partnered organizations.

What is SRA?

Security Risk Advisors is committed to unique and diverse perspectives, especially for those who have been traditionally underrepresented and unemployed in the cybersecurity field. Driven by this commitment, they have set up a fund that will provide $5000 scholarships to learners who qualify. This scholarship can also be stacked with the GCI’s other scholarship offerings, meaning that some learners could potentially not pay anything out of pocket for this one-of-a-kind program.

We are deeply committed to building a diverse cybersecurity workforce. Diversity can take many forms, but we know that a team’s cognitive diversity is a primary indicator of performance. And it’s clear that cybersecurity requires top-performing teams.

Also, we believe that creating better career opportunities for underrepresented populations is just the right thing to do. With all that in mind, we offer these scholarships to those who might not normally consider a career in cybersecurity.

$5000 Next Gen Cybersecurity Scholarship

Program Eligibility

Due to generous private donation, we have a small number of $5000 scholarships available for underrepresented populations residing in the US. These scholarships are designed for people with non-traditional backgrounds who are trying to transition into the cybersecurity workforce. A few categories include but are not limited to: women, single-parent households, minorities, people with non-technical backgrounds, and disabled persons.

Security Risk Advisors Next Gen Cybersecurity Scholarship Application

Prospective students must complete the Next Gen Cybersecurity Scholarship application form on the Bootcamp website, under the Scholarships section, which includes a short explanation about how your background will add stability to the cybersecurity workforce. The website can be found on the back of this brochure.

If you want your unemployment or displaced worker status taken into consideration, you must also provide official documents verifying your dislocated worker status (original hiring & termination or notice of layoff letter, or a State Department of Labor Displaced Worker Certification).

Applicants will need to send these documents to rangeadmissions@rit.edu.

Once approved, Next Gen Cybersecurity Scholarship students must arrange for payment of the remainder of their tuition by the end of the last business day before classes begin.
Global Cybersecurity Institute's Cybersecurity Bootcamp is an immersive 15-week hands-on training course. All content and interactions are delivered remotely but include significant live interactions with our faculty and your fellow students. Built around a virtual simulation of a company, you will be trained not only through lectures and exercises but also by being assigned work roles and real-world tasks that will help you learn how to put your classroom learning into practice. This simulation leverages RIT's nationally-recognized expertise in our School of Interactive Games and Media, the Saunders College of Business, and the Department of Computing Security.

Due to generous private donation, we have a small number of $2500 scholarships available for underrepresented populations residing in the US. These scholarships are designed for people with non-traditional backgrounds who are trying to transition into the cybersecurity workforce. A few categories include but are not limited to: women, single-parent households, minorities, people with non-technical backgrounds, and disabled persons.

What is PRET?

The Professional Re-employment Education Training (PRET) scholarship at RIT is a program designed to assist qualified dislocated workers who have lost their jobs as a result of economic or business conditions. PRET provides institutional support for these individuals to pursue Cyber Range training after documenting their eligibility.

- Assist dislocated workers in upgrading their skills or in pursuing new career areas
- Contribute to the overall economic well-being of the community
- Enable separated employees to utilize their separation benefits to pursue RIT courses or degree programs.

Program Eligibility

PRET is limited to US citizens and residents who have worked full time for a minimum of twelve consecutive months prior to separation from their employer. Only employees who are dislocated by economic or business conditions within one year will qualify. Those who voluntarily terminate their employment without benefits or who are terminated for cause are not eligible. Employees who accept separation incentives as part of a corporate downsizing or other management-initiated reorganization may qualify with appropriate documentation. Dislocated workers may enter the Cyber Range during any cohort.

Enrollment Procedure & Process

Prospective students must complete the PRET application form and provide official documents verifying their dislocated worker status (original hiring & termination or notice of layoff letter, or a State Department of Labor Displaced Worker Certification). Applicants will need to send these documents to rangeadmissions@rit.edu.

PRET applicants are interviewed, their employment status verified and they are then offered admission to a specific cohort within the Cyber Range.

Once approved and advised, PRET students must arrange for payment of the remainder of their tuition by the end of the last business day before classes begin.

$2500 Scholarships for unemployed workers from any US state or territory.
