Best unload route for students assigned to Global Way 403 and 404 and Global Village 400

Under Construction

Global Village 405

Additional Parking

Residential entrances

Global Village 400
GLOBAL VILLAGE RESIDENTS

Please make note of the following information while living in Global Village.

Electricity/Circuit Breakers
Please turn off any electrical equipment **BEFORE** unplugging it from the wall outlets.

The electrical wiring throughout Global Village has arc fault breakers. If you rapidly unplug anything from a wall outlet when the device is drawing electricity, you may cause the arc fault breaker to trip which will cause all outlets on that circuit to stop working. This is a required safety feature and not a malfunction of the electrical system. Also, be careful not to plug too many items into one circuit. Multiple items plugged into one circuit, such as refrigerators, coffee makers, and computer set-ups, tend to cause the arc fault breakers to trip.

The bedroom circuits are wired so that bedrooms A & B are on the same circuit, C & D are together, and E is on its own. For example, if your roommate is vacuuming in bedroom B and quickly pulls the cord from the outlet without turning the vacuum off first, it is likely that both bedrooms A & B will lose power.

Storage Under Beds
There are a few features of your room furnishings that you might not be aware of. The beds have storage underneath them that you can access by lifting your mattress up. The mattress has two different firmnesses. One side is extra firm and the other is plush firm.

Air-conditioning/Heat
If you open any windows in your suite when the air-conditioning or heat is operating, the system will not cool/heat the suite to your desired temperature. This is an energy conservation and sustainability feature to ensure that we are not cooling/heating the outdoors.

Showers
The showers in your suite are a different style than you may be used to. Please keep the shower curtain inside and curled into the tub/stall to avoid water escaping out onto the bathroom floor.

Each suite is equipped with a hot water on demand system. These systems do not store hot water so it may take a few seconds for hot water to come out of the faucet.

Bedroom Locks
Don’t forget your bedroom key!

When you leave your bedroom, you must have your key with you to lock the bedroom door. Pushing in the lock when the door is open and pulling the door shut will not activate the locking feature. This feature was put in place to minimize the occurrence of bedroom lock-outs.
