### Supplier Information
- **Supplier Name**: HANSOL AMERICA
- **Supplier Address**: 400 KELBY ST, FORT LEE, NEW JERSEY, 07024
- **Supplier Country**: USA

### Product Information
- **Product Name**: Endurance Recycled Gloss Text 100
- **Product Category**: Paper
- **Grammage (gsm) / Basis weight (#)**: 148 gsm/100#
- **Thickness (microns/caliper)**: 120 um
- **Certification Number**: RI5500-15-4403
- **Certification Center**: RIT
- **Date of Evaluation**: 09/21/2015
- **Certified for**: 3050/3500, 5000, 5500, 5600 multi-shot, 7000, 7500, 7600, 7800 & 10000

### Evaluation Process

### Ink Adhesion / Fixing
- **Peeling**: 100%K in 4 color mode, % in remaining
  - Result: 99%
- **Flaking**: <1mm, % Coverage
  - Result: 350%
- **Photo Peeling**: 290K in 4 color mode, % in remaining
  - Result: 95%
- **Photo Flaking**: <1mm, % Coverage
  - Result: 350%
- **Photo Recommended**: >80% after 10 or 60 min
  - Result: Yes
- **White Ink Recommended**: >80% after 10 or 60 min
  - Result: N/A

### Blanket Compatibility
- **Cleaner Pages**: 1st clean page after 12K impressions
  - Result: ★

### Evaluation Result
- **Result**: Pass

### Conclusion

The evaluation of HANSOL AMERICA's Endurance Recycled Gloss Text 100 paper was conducted using an HP 5500 printer, including applications such as 3050/3500, 5000, 5500, 5600 multi-shot, 7000, 7500, 7600, 7800 & 10000. The paper received a pass evaluation result with a high level of runability and excellent ink adhesion. The printer's ability to handle the paper includes various modes and settings, ensuring its suitability for commercial printing applications.
The substrate certification procedure incorporates several processes. An initial screening evaluation is followed by a more comprehensive evaluation looking at the performance of the particular substrate within the press. This checks for:

**Runnability:**
The ability of the substrate to run smoothly through the press in various print modes.

**Fixing:**
Ink-substrate interaction as determined by: 1) The degree of ink adhesion to the substrate for standard and photo-related applications as measured in a tape peel test of the image; and 2) The degree of flaking of the ink layer. The fixing properties are measured through a range of blanket temperatures and pressures.

**Blanket Compatibility:**
Blanket-substrate interaction as determined by: 1) Ink-transferability, which is the quality of ink transfer from the blanket to the substrate as reflected in highlight dots, thin lines, heavy images and image edge integrity; 2) ‘Blanket Memory’ effects, reflected in gloss or density differences between solids and background areas of the previously printed image; and 3) Number of cleaner pages, in which blankets are routinely maintained by performing a self cleaning procedure (“cleaner pages”) used to refresh the blanket’s release layer.

**Photo and White Ink Applications:**
Use of robust media products is strongly recommended when printing photo-related and/or white ink applications and/or Light Cyan and Light Magenta due to additional ink coverage demands of these applications. This media has been tested and approved to perform well with higher levels of ink coverage, and is therefore recommended for photo-related and/or white ink type applications. However, it is strongly recommended that user acceptance ultimately be evaluated per individual application and finishing requirements, etc. The test results are provided as a guide; assess actual performance to determine suitability for individual use.

**Star Rating**

- ★★★ Best performing substrate: fewer print cleaners needed; no blanket memories at least up to 12K impressions.
- ★★★ Recommended substrate: some print cleaners may be needed; slight memories may be seen up to 12K impression
- ★ Good substrate: print cleaners generally required; some memories may be seen by 12K impressions.

This substrate is certified for the next two years from the date of evaluation, provided there is no change to the paper properties or production processes. At the end of two years from the original evaluation date, if there have been no changes in paper properties or production processes, the certification can be extended for another two years. After four years from the original certification date, a new certification is required.
