All color prints appearing in Techmila, color copy work and prints of studio stills of artpieces, were done by Sentry Color Labs. Ltd. Rochester, N.Y.

Sports section design
by Hans Koch.

Film used in SX-70 was donated by the Photo Science Department as part of a larger gift from the Polaroid Corporation.

Color film processing was done by the RIT Photo Processing Center.
Energy House

Peeking over the horizon just on the other side of Riverknoll a new structure made its appearance this year at R.I.T. Began as a research project by Dr. Paul Wojciechowski the idea of utilizing the sun's energy in a private home was realized through the joint effort of R.I.T., Rochester Gas & Electric and the Rochester Home Builders Association. This "New England salt box" design employs some of the latest and most accessible solar technology, producing a practical prototype for a contemporary family dwelling.

Thirty-eight solar collectors mounted on a traditional steeply pitched roof transfer the sun's rays into heat. Heated water from the collectors is then pumped to special holding tanks and used for the hot water system and actual heating of the house. This system, in conjunction with fortified insulation and carefully thought-out window placement results in a nearly self-sufficient energy system. Electricity is used for traditional lighting and appliances as well as heating the water in the holding tanks up to temperature during extended periods of poor weather.
Water Flow

There are four holding tanks. As hot water in the first hot water tank cools (approx. 2 degrees a day) it is pumped into the warm tank. This process is repeated with each tank — warm into cool, cool into cold, and provides for maximum heat retention. Water from the cold tank is then pumped up to the roof, heated by the solar panels and then returned to the hot tank, thus completing the cycle.

Air Flow

Air is heated by the sun which enters through the front bay of windows. Due to the open design the heated air rises through the first and second floors. As this air reaches the apex it cools and drops down the shaft created by the steel staircase. A louver door at the basement level of the staircase adds additional drawing power for the cooling air. Once entering the basement the air is drawn into a vent where residual heat is extracted for re-circulation and spent air is exhausted outdoors.

Insulation

A. Six-mil. polyethylene lining
B. Six inches of fiberglass butting
C. One inch styrofoam sheathing
D. Wood shingles
good food... nice atmosphere... student "hang-out"...
...the Downtown shopping "scene"...great stores...with bargains to be had...

...shimmering modern skyline...admiring of old and new...real nice view...
the crossroads of the city ... public transportation ... in our modern city ...

corporate headquarters ... at the helm ... of the business district.
for-out rock concerts... variety sports action... and the circus too...

modern suburban shopping mall... for all your shopping needs...
...bustling downtown streets ... with many fine shops and hotels...

...The after-hours campus ... good drinks ... and musical groups...
Those in attendance included:
Drs. Paul and Fancina Miller
Dr. and Mrs. Robert Johnston
Mr. and Mrs. Richard Eisenhart
Dr. and Mrs. Maurice Forman
Mr. and Mrs. Lothar K. Engleman
Photographer:
Prof. Robert Kushner
Guides:
Mr. Hsieh Kuo-Chi
Mrs. Wang Hsiau-Nan

RIT Goes to China
January 1978

In an effort to make the RIT name better known, and to explore the possibilities of information, student and faculty exchange, a group of distinguished faculty members and associates spent 18 days in the People's Republic of China. The itinerary included the major cities with visits to communes, schools, factories and historic sights. The following pictures document the old and new of modern China.

Photographs by Dr. Robert Johnston and Professor Robert Kushner.
1. General idea:
   (a) "to" (sign of infinitive)
   (b) "to" (preposition)

   to + root form of a verb = infinitive
       to the factory
       to China
       to me
       to building socialism

   The Infinitive
“Stereotyped” would not be a good term to use when defining cadets at the Army ROTC program at RIT. Cadets in the ROTC program come from a wide spectrum of backgrounds and are pursuing an equally wide variety of academic endeavors. Cadets from RIT are represented from almost all schools, colleges and departments including photo, computer science, business, engineering, fine arts and many others.

In addition to RIT, several other Rochester Area Colleges and Universities have students participating in the program at RIT. Fifteen percent of the program’s cadets are women. Nationally, the Army ROTC program was opened to women in 1972 and this year RIT’s program will commission, for the first time, three female cadets as second lieutenants. Women can enter any branch of the Army except the Combat Arms. The three women commissioned in 1978 will enter the medical service corps, quartermaster and adjutant general branches.

All photographs were taken during ROTC tactical exercises at Fort Drum, New York. Photos by Bill Lampeter.

Party!

a gonzo investigation into the seedier side of college life.

photography by Gil Cope & S. Buck
FOOTBALL — the understood companion of colleges across America — except at RIT, Where our administration decided the THE BUDGET could no longer support this activity. It's too bad they showed such a misplaced sense of priorities, for had they looked past their desk-top dollar signs they would have realized that education extends beyond classroom walls. The people on these pages are alive with the intensity of emotion that makes our lives more than just an existence. But don't get excited about going to games here — there aren't any more.

Women's Weekend

On the weekend of March 31st through April 1st the R.I.T. campus hosted two days of art exhibits, lectures and workshops on the changing role of women in today's society.

All photographs by Anne Lenox Bergmanis
Claudia Weill

An accomplished film director who premiered her new film "Girlfriends" at R.I.T. "Girlfriends" has since been accepted for the Cannes Film Festival. Ms. Weill also co-directed, with Shirley MacLaine, "The Other Half of the Sky: A China Memoir". This documentary received an Academy Award nomination in 1975.
Judy Chicago

Artist and writer currently working in Los Angeles. Ms. Chicago is the author of "Through the Flower", a book about women and creativity from an historical and personal perspective.

The blindfolded man above is participating in a "Men's Sensitivity Workshop". This exercise stressed trust and shared experience.
Kern Series

This year a group of prominent authorities on visual media appeared at RIT as part of the 1977-78 Kern Program/Institute Forum. They explored, from their various vantage points, the impact and possible consequences that the "moving images" of television and cinema have had on modern society.

Kenneth Mason

As the Assistant Vice-President and General Manager of Eastman Kodak's Motion Picture and Audio-Visual Markets Division, Mr. Mason addressed himself to areas of advancement in motion picture technology. He spoke of faster, finer grained motion picture films for the future.

Vivian Horner

After three months of operation Dr. Horner's Qube had over half of Columbus Ohio's cable TV listeners as its subscribers. The Qube is a 30 channel interactive cable television system which allows viewer participation in TV programs. This system has been used for instructional programs as well as a means to conduct instant surveys of public opinion.

Roger Fransecky

As a crusader for visual literacy Dr. Fransecky aims to get instructional television for children out of "the visual ghetto". In urban schools, he feels, instructional television may be the only hope for disadvantaged learners.

Richard Edlund

First Cameraman for the Miniature and Optical Effects Unit of Star Wars Corporation spoke on the development of the technology used to create the believable representations in the film "Star Wars".
"Stillness and Mobility": Images of movement in great paintings and sculptures are unlike images of movement in many still photographs and in films because the painter or sculptor is interested in capturing the idea of movement, not the photographic accuracy of any one moment of that movement. Thus the painter or sculptor will join together in one work of art physical gestures that are, in a chronological sense, incompatible but that when combined suggests movement in a still image.

Susan Sontag
Ms. Sontag discussed her controversial philosophy on photography. She maintains that the advent of photography began a fundamental change in our sense of experience, memory and intellect with the image increasingly replacing direct experience. In our age we tend to see reality not as it is but as a collection of unrelated photographic images.

College of Science
It is curious the way RIT manages to channel its community into neat categories. It is divided into separate colleges, then into separate departments, and still further into separate programs. One can look at RIT as the main artery that feeds the capillaries, which nourish the cells essential in maintaining the livelihood of the whole system. It is all very precise and compact. Each part has its duty to perform. Deviation within a single facet could disrupt the entire plan. In the final analysis, it is quite an inventive and necessary system for such a complex situation.

Students are the "cells" in this system. Unlike that word, or what it may imply, we are not contained in our separate bubbles, indifferent to the goings on outside. Even more, we do not appreciate the idea that we are programmed to perform a certain duty, being fed information whenever the system deems it necessary; we cannot allow ourselves to be. We are, after all, students, and as such we have the capacity to interact and be open to new possibilities. In a greater sense, we are unique, and in each of us is the potential to offer our own contribution.

The purpose of Folio '78 is to balance the observed compartmentalization of the student by exemplifying his or her personal goals and directions.

Secondly, although we leave RIT with lofty titles such as painter, photographer, retailer, printer, accountant, engineer, or whatever, it is our wish to show that no one can be just one thing. It is both uncomfortable and limiting. There are many facets to one's personality and talent. Some people have come to realize this — many have the potential to. Many find this a dilemma and many more welcome it as a blessing. This is clearly shown through the crossovers in the methods of execution by the students represented here.

Although names are emphasized here, this is not necessarily a book of "honors" or "the best." These people have all attained a certain level of accomplishment worthy of representation but, due to limited space, many more cannot be included.

Folio '78 is an important publication of RIT and it is an honor to participate in it. We turn to the creators of the visual in this book, but it is dedicated to the spirit of those who wish to teach, to express, to learn, and to aspire.

Jan Orque

The talents of Jeff Schewe photographed the 3D pieces. Greg Rohall helped solicit photographs. Emery Chu shared his wisdom and taste. A lot of support came from Mark Luiggi. Gerry, Hans, and Buck were there to add to the confusion. And, of course, Bill Lampeter was there for everything. Thank you all very much.

Special thanks to all the contributors who shared their time and insight.

Valeri Vasiliev (No. 6) has just scored.
"Perhaps the most difficult task for the artist is to endure. To endure requires a stringent attitude without room for compromise, while realizing that compromises must continually be made. If my art is an attempt to explain my existence and my perceptions of it, I find it paradoxical that as an artist I am unable to find a convenient niche in society. Because of this my vision may be somewhat distorted. But on the other hand it may be an intimate and very precise reflection.

My work is often a technical as well as existential extravaganza. While technique and media should be purely secondary concerns, one must be familiar with them in order to develop a fluent creative language."

"My interest in combining the photographic image with the printmaking process finds its basis in the beautiful textural quality of ink on paper. The image, however, maintains primary importance, dictating which process to use according to the advantages and limitations of each process, which ultimately allows me more control over the final image.

My work is a natural development of my concerns of the photographic image in relation to the nonsilver processes, specifically photogravure and photo-etching; a means of further developing an understanding of my personal aesthetic and vision."

"Inherent in my work at this point in time, is the relationship between visual conciseness and the vitality of energy intrinsic to conciseness. A contrast lies between what appears to be tight and firm contrary to the evanescent and moving yet impalpable energy, which inevitably enacts on the subjectivity of reaction. The varying degrees of conciseness, in all its colors, placements, and subtleties, simply and gracefully resolve themselves into differentiating gestures. It is their gestures which I choose to portray and investigate."

Compliments of Central Laundry
For sale.
The future of the American economic system.

Too many young people know too little about why business is in business. They're not only misinformed, they're critical and even hostile.

Whose fault is it?
It's time business itself accepted a major share of the blame. Instead of telling young people the economic facts of life, we've been letting them grow up believing in a free lunch.

So when an opportunity like Junior Achievement comes along, we'd better not miss it.

With this spoon-handle ring, a local JA company is learning about business by actually managing one.

The Achievers issue stock; elect officers; run assembly lines manufacturing the rings; chart pricing and marketing options; keep books; pay wages, taxes, and rent; monitor product quality and production safety; participate in trade fairs; hold board meetings and sales drives; write an annual report; and, they hope, earn profits to pay dividends.

Most of the things any company does.

During the school year, more than 1300 Monroe County high school students in 5 JA companies will be doing roughly the same thing.

To encourage JA members, Kodak and many other local firms invest their money in Junior Achievement. Kodak men and women also volunteer their time, spending one evening a week to counsel eight JA companies.

Someday, we think the payoff will exceed the investment. Which is only good business.

Kodak.
More than photography.
colophon

Techmila 1978 has been published in a limited edition of 4500 copies with funds from the Student Association of the Rochester Institute of Technology. This is the sixty-seventh volume of Techmila. Techmila and Folio were printed by offset lithography by the Hunter Publishing Company of Winston-Salem, North Carolina.

The Folio section of this book has been printed on 100# Kromecoat paper; the remainder of Techmila is printed on 80# Warren's Cameo Brilliant Dull stock. The cover is on Lexotone book-cloth with a silk-screened design. End-sheets and divider-pages are printed on 10-point mustard-colored stock. Folio has been overrun in 740 copies on Warren's Cameo Brilliant Dull and in 160 copies on 100# Kromecoat. These copies are bound in a 12-point Carolina-coated cover stock.

The black and white images in Folio are printed in black/black duotone with a matte black ink defining the shadow tones, and a glossy black ink defining the highlight tones. This novel technique, which yields dense blacks and sparkling highlights, has been devised to provide RIT image makers with the kind of reproduction which their images deserve.
