

Benefits

The benefits of participating in the **RIT's Gear Research Consortium** are the followings:

- Access to full capabilities of IGD - Integrated Gear Design - software package.
 - Free training in our facilities about advanced gear design, simulation and finite element analysis to bring you up-to-date on application of the most advanced gear simulation techniques.
 - Access to past and future publications of the Gear Research Laboratory at RIT before they are even published.
 - Participation in an annual consortium meeting at RIT covering recent developments on advanced gear design and manufacturing.
 - Meeting colleagues from industry peers and trained students in theory and practice of gearing.
 - Participate in the configuration of the roadmap for further development of IGD to make it the tool that your company needs.
-
