Preparing you for an outstanding educational experience

Graduate Bulletin 2023-24
Fall Semester (2231)

August 28
Day, evening, and online classes begin
First day of Add/Drop period †

September 2
Saturday classes begin

September 4
Labor Day – No Classes

September 5
Last day of Add/Drop period †

September 6
First day to drop from classes with a grade of “W”

October 9-11
Fall Break – No Classes

November 10
Last day to drop from classes with a grade of “W”

November 22
No Classes
University closes at 2pm

November 23-24
Thanksgiving Holiday
University closed

December 11
Last day, evening, and online classes

December 12
Reading Day

December 13, 14, 15, 18, 19, 20
Final Exams

December 22
Final Grades Due

December 23-January 15
Break between fall and spring semesters

Spring Semester (2235)

January 15, 2024
Martin Luther King Jr. Day – No Classes

January 16
Day, evening, and online classes begin
First day of Add/Drop period †

January 20
Saturday classes begin

January 23
Last day of Add/Drop period †

January 24
First day to drop from classes with a grade of “W”

March 10-17
Spring Break – No Classes

April 5
Last day to drop from classes with a grade of “W”

April 29
Last day, evening, and online classes

April 30
Reading Day

May 1, 2, 3, 6, 7, 8
Final Exams

May 10
Final grades due

May 10-11
Convocation and Commencement Ceremonies

May 12-15
Break between spring semester and summer term

12-week Summer Term (2238)

May 15
Day, evening, and online classes begin
First day of Add/Drop period †

May 18
Saturday classes begin

May 22
Last day to Add/Drop classes †

May 23
First day to drop from classes with a grade of “W”

May 27
Memorial Day – No Classes
University closed

June 19
Juneteenth observed – No Classes

July 4
Independence Day observed
University closed

July 25
Last day to drop from classes with a grade of “W”

August 7
Last day, evening, and online classes

August 8
Reading Day

August 9, 12, 13
Final exams

August 15
Final grades due

August 16-25
Break between summer term and fall semester

Short Session 1
Summer Term (2238)

May 15
Day, evening, and online classes begin
First day of Add/Drop period †

May 20
Last day to Add/Drop classes †

May 21
First day to drop from classes with a grade of “W”

May 27
Memorial Day (no classes)
University closed

June 19
Juneteenth observed – No Classes

June 20
Last day to drop from classes with a grade of “W”

June 26
Last day of classes

June 27, 28, 29
Final exams

July 1
Final grades due

Short Session 2
Summer Term (2238)

July 1
Day, evening, and online classes begin
First day of Add/Drop period †

July 4
Independence Day observed – No Classes
University closed

July 5
Last day to Add/Drop classes †

July 6
First day to drop from classes with a grade of “W”

July 31
Last day to drop from classes with a grade of “W”

August 7
Last day, evening, and online classes

August 8
Reading Day

August 9, 12, 13
Final exams

August 15
Final grades due

† The Add/Drop period is the first seven class days of the fall, spring, and full summer terms, excluding Sundays and holidays.

* Tentative spring semester and summer term schedule. RIT reserves the right to update the spring and summer schedule.
About This Bulletin

This Graduate Bulletin does not constitute a contract between the university and its students on either a collective or individual basis. It represents RIT’s best academic, social, and financial planning at the time of publication. Course and curriculum changes, modifications of tuition, fees, dormitory, meal, and other charges, plus unforeseen changes in other aspects of RIT life, sometimes occur after the Graduate Bulletin has been printed but before the changes can be incorporated in a later edition of the same publication. Because of this, Rochester Institute of Technology does not assume a contractual obligation with its students for the contents of this Graduate Bulletin. RIT does not discriminate. RIT promotes and values diversity within its workforce and provides equal opportunity to all qualified individuals regardless of race, color, creed, age, marital status, sex, gender, religion, sexual orientation, gender identity, gender expression, national origin, veteran status, or disability.

A Message from Diane C. Slusarski, Ph.D.,
Associate Provost and Dean, RIT Graduate School

The core mission of the RIT Graduate School is to enable graduate students to succeed in their programs of study, research, and creative endeavors. The Graduate School operates collegially through partnerships with all units on campus involved in graduate education in support of graduate students. The colleges continue to administer their own degree programs, but the Graduate School brings a university-wide perspective to graduate education and promotes interdisciplinary endeavors. It strengthens the intellectual community of graduate students and faculty. The Graduate School partners with the colleges to maintain the highest quality of graduate education at RIT.

The graduate learning experience at RIT is focused and intensive. Our graduate programs provide a conceptual structure and organization of knowledge in the chosen subject—an understanding essential to leading technological change in the professions. They also build an educational base for life-long learning and for the generation of new knowledge and new insights through research.

The programs themselves are centered in fields that combine both theoretical knowledge and practical applications, especially those which can provide the graduate with a unique niche in the global marketplace. Research topics often relate directly to situational concerns, rather than theoretical discourse. Many programs require a dissertation, thesis, or project, and encourage other avenues for professional experience, such as cooperative education and internships in government and industry. Graduate student may also assist in undergraduate education, as teaching, research, or laboratory assistants.

Whether a dissertation, thesis, project, or professional portfolio is required of them, our students are encouraged to incorporate both independent study and experiential learning into their programs.

A Philosophy Supported by Campus Resources

RIT’s mission is the education of people for work and life in a democratic, inclusive, and global society. It is integral to the university’s mission to be a dynamic center of higher education—one in which technology, the arts and sciences, and other dimensions of human knowledge and civilization are valued, cultivated, and applied. RIT structures itself as an educational resource for all who seek to be competent and enthusiastic lifelong learners, whether they are young adults or professionals seeking to upgrade their skills by studying for an advanced degree.

Our goal is that all graduates will understand the ethical, humanitarian, and aesthetic challenges of a diverse workplace and an international community. The university’s educational philosophy emphasizes not only theory—the natural foundation of knowledge—but also the practical workplace application of theories. This dual emphasis is prized by employers and offers graduates upward career mobility and the flexibility for changes in career direction.

History of Graduate Education

Over the past six decades, graduate education at RIT has grown from a few niche programs to more than 100 professional and research-oriented degrees and advanced certificates constituting a diverse and unique, scholarly portfolio in the visual arts, humanities, business, and science, technology, engineering, and mathematics (STEM) disciplines. RIT’s strong tradition of undergraduate education has laid the groundwork for the university’s graduate education programming, resulting in skilled, innovative and highly desired professionals. Today, RIT has approximately 3,000 graduate students and offers MS, MBA, MFA, MST, MSE, M.Arch., and Ph.D. degrees. All graduates from these disciplines continue to push the frontiers of research, entrepreneurship and innovation. All of RIT’s colleges and degree granting units exhibit continuous concern for the emerging needs of the business, industrial, and scholarly communities.

To support RIT’s continuing endeavor to provide education in emerging career fields, the university offers eleven doctoral programs in the fields of astrophysical sciences and technology, business administration, color science, computing and information sciences, imaging science, mathematical modeling, microsystems engineering, electrical and computer engineering, sustainability, biomedical and chemical engineering, and mechanical and industrial engineering.

RIT, founded in 1829, is a privately endowed university in suburban Rochester, NY. It is comprised of nine colleges and two degree-granting units:

College of Art and Design
Saunders College of Business
Golisano College of Computing and Information Sciences
Kate Gleason College of Engineering
College of Engineering Technology
College of Health Sciences and Technology
College of Liberal Arts
National Technical Institute for the Deaf
College of Science
Golisano Institute For Sustainability
School of Individualized Study

For additional information, contact us at:
Rochester Institute of Technology
Office of Graduate Enrollment Services
58 Lomb Memorial Drive
Rochester, NY 14623-5604
(585) 475-2229
gradinfo@rit.edu | rit.edu/grad
example, students in microelectronic engineering have access to clean-room facilities that meet industry standards. Students majoring in visual communication design access digital media using a variety of systems and software, including Macintosh, IBM, Silicon Graphics, and Media 100 digital video editing. Our telecommunications technology workstations have been donated by an industry eager to hire students experienced with equipment used in their own laboratories.

Technology has also brought together students in design, crafts, photography, and print and multimedia. In RIT’s Electronic Still Photography Laboratory, these disciplines have merged through electronics. Regardless of the program, RIT encourages and promotes technological innovation in all areas.

**Specialized and Diverse Programs**

While technology is integral to all graduate programs, the essence of RIT graduate education is found in the diversity of programs, course offerings, and learning options. Our reputation as an advanced university is matched by our commitment to offering programs designed to meet the specialized needs of employers. A dozen international corporations—including Eastman Kodak Co., Konica, Agfa Gevaert, Xerox Corp., and Fuji Photo Film Co.—have sponsored the building of laboratories in the Chester F. Carlson Center for Imaging Science, which houses the nation’s most comprehensive imaging science programs. Enriched by the perspective provided by the National Technical Institute for the Deaf, one of RIT’s colleges, we offer full access to deaf and hard-of-hearing students seeking graduate-level academic programs.

Graduate students across campus engage in exciting research and stimulating dialogue with faculty and distinguished visitors such as George Bush, Bill Clinton, Joe Torre, Jesse Jackson, Annie Leibovitz, Jerry Uelsmann, Cornel West, and Greg Heisler.

The university continues to receive international recognition for the quality of its graduate programs. In a recent ranking of national graduate programs, U.S. News & World Report named the MFA program was named 9th in graduate rankings.

**Convenient, Flexible Programs**

RIT’s diversity also extends to the manner in which courses and programs are scheduled. Many of our graduate programs are available on a part-time or online basis and are designed for working professionals. Examples of programs offered through online learning include environmental, health and safety management; imaging science; microelectronics engineering; and health systems management. These programs allow students access to an RIT education without attending classes on campus.

In addition, RIT’s executive MBA program offers professionals an opportunity to earn a master’s degree by studying on campus Friday and Saturday, every other week, or through online learning. Professionals from California to England visit RIT every year for executive leader master’s degree programs in service management, hospitality and tourism management, health systems administration, and packaging science, which combine on-campus residencies with classes using distance-learning technology.

**Sponsored Research Projects**

Externally sponsored projects are a vital and integral component of RIT’s educational and research activity. Faculty and students undertake sponsored projects for a variety of important reasons: to add to the body of knowledge, for professional development, and to strengthen academic programs. Sponsored projects enhance the university’s academic programs, broaden its research resources, and provide opportunities for student participation in research, strengthen university-industrial partnerships, and serve the wider community.

Moreover, grants and contracts enhance existing resources and provide new opportunities for faculty, staff, and students. External funding comes from federal and state agencies, private foundations, and corporations. RIT’s major sponsors include the National Science Foundation, the National Institutes of Health, the U.S. Department of Education, the Department of Defense, the National Aeronautics and Space Administration, and New York State.

Additional information is available through the Office of Sponsored Research Services at 585-475-7985, research@rit.edu, or on their website at rit.edu/research.

**Accreditation**

RIT is chartered by the New York state legislature and accredited by:

- The Commission on Higher Education
- Middle States Association of Colleges and Schools
  3624 Market Street
  Philadelphia, PA 19104-2680
  215-662-5606
- New York State Education Department
  Office of College and University Evaluation
  5 North Mezzanine
  Albany, NY 12234
  518-474-2593

In addition to institutional accreditation, many of RIT’s academic programs have been granted accreditation by appropriate professional accreditation bodies. Where applicable, specific mention of accreditation is included in program descriptions. Students wishing to review documents describing accreditation should contact the Office of the Senior Vice President for Academic Affairs.

The Graduate Bulletin provides comprehensive information on all graduate programs at RIT. I encourage you to explore its contents to find the educational and research opportunities you seek. I look forward to welcoming you to our campus, and wish you success in your chosen program of study.

Doctoral Study at RIT

Doctoral programs at RIT are multidisciplinary, cutting-edge, and unique. Our highly interdisciplinary programs were developed out of RIT’s unique areas of strengths in imaging, business administration, computing, science, engineering, mathematics, and sustainability. Our long history of providing education focused on emerging technologies has led to the development of doctorate level programs that draw upon our expertise and experience in these dynamic disciplines of study.

Our doctoral programs focus on the discovery and application of technology to solve problems in society. The interdisciplinary nature of the programs means students will work alongside more than 100 Ph.D. faculty members who are experts in a wide range of fields that are influenced by imaging, computing, science, engineering, and sustainability.

Doctoral programs of study
RIT offers doctoral degrees in areas where RIT shares national and international recognition.

**Astrophysical sciences and technology:** Students in the astrophysical sciences and technology program experience a comprehensive curriculum and a broad range of research opportunities that span forefront topics, such as cosmology and large scale structure, detectors and instrumentation, galaxy structure and evolution, gravitational waves, star and planet formation, supermassive black holes, and numerical general relativity. This program not only focuses on discovery and analysis, but also on the development of the technologies—including the instruments, analysis, and modeling techniques—that will enable the next major strides in astrophysics.

**Biomedical and chemical engineering:** The biomedical and chemical engineering Ph.D. program provides you with the knowledge, training, and expertise to tackle important problems in industry, academia, government, and health care. You will graduate as a highly skilled researcher well positioned to be a leader in the next generation of engineers who will tackle the challenging and complex problem facing our society.

**Business administration:** The Ph.D. in business administration is designed to inspire and train scholars to identify, investigate, and solve novel business challenges that influence business and society, particularly, those that are triggered by technological changes. Our program has a sharp emphasis on the effects of technological innovation on discipline-based theories and research. Our faculty adopt an apprenticeship model in working with students to become independent scholars, cutting-edge researchers, and well-trained educators at research-oriented universities.

**Color science:** Color science is the understanding and quantification of color and its perception. It is used in the design and production of most man-made materials including textiles, paints, and plastics, and to specify the properties of diverse natural materials such as skin, plants, and soil. It also provides the scientific foundation for color imaging and has enabled advances in digital photography, electronic display systems, and color printing. The degree program revolves around the activities of the Munsell Color Science Laboratory, the pre-eminent academic laboratory in the U.S. devoted to the study of color science. For more than 30 years its faculty and staff have educated students and conducted cutting-edge research in the field. Since the inception of the program, graduates have been in high demand and enjoy a 100 percent placement rate in industrial and academic positions.

**Computing and information sciences:** This use-inspired basic research degree is designed to produce independent scholars, well-prepared educators, and cutting-edge researchers poised to excel in their work within interdisciplinary environments and industries. The degree highlights two of the most unique characteristics of the Golisano College—the breadth of its program offerings and its scholarly focus on discovering solutions to real-world problems by balancing theory and practice.

The program focuses on the theoretical and practical aspects of cyberinfrastructure as applied to specific problems across multiple domains. It is a blend of the intra-disciplinary computing knowledge areas and interdisciplinary domain areas.

**Electrical and computer engineering:** The 21st century has witnessed such advances as the Smart Grid, ubiquitous fast internet access through wireless networks, artificial intelligence and machine learning technologies that rival humans in performance, the Internet-of-Things, cloud computing, fiber-optic networks capable of transmitting trillions of bits per second, new computing paradigms such as quantum or neuromorphic computing, and many more. None of these advances would have happened without the dedication of researchers in electrical and computer engineering. Students in the Ph.D. in electrical and computer engineering are explorers of the information age who transform the world by leading trailblazing research that expands and create knowledge.

**Imaging science:** Imaging was named one of the top twenty engineering achievements of the 20th Century by the National Academies. Imaging has transformed our ability to see and understand a range of phenomena, keeping us healthy, protecting our security, monitoring the earth, exploring the universe, uncovering and preserving our heritage, enhancing communication, and facilitating our everyday lives. The imaging science doctoral program is designed to provide a fundamental understanding of the physical, electro-optical, mathematical, computational, perceptual and statistical foundations of imaging science that are necessary to create, optimize, and apply imaging systems.

**Mathematical modeling:** Mathematical modeling is the process of developing mathematical descriptions of real-world systems that are used to understand and predict phenomena. Many current problems in science and technology are of such size and complexity that their solutions require sophisticated techniques drawn from
computational and applied mathematics as well as the participation of mathematicians on the interdisciplinary teams of scientists that address them. This pioneering interdisciplinary program provides students the education they need to become experts in formulating complex problems mathematically, integrating data with models, devising and implementing algorithms and interpreting solutions, and communicating effectively with experts in various fields.

Mechanical and industrial engineering: The mechanical and industrial engineering doctorate program produces graduates with a depth of knowledge in mechanical or industrial engineering, while allowing students to engage in cutting-edge, cross-disciplinary research. The flexible curriculum encourages students to gain domain-specific knowledge from courses offered throughout the college’s portfolio of engineering programs. The curriculum, coupled with depth of knowledge in mechanical or industrial engineering disciplines, creates graduates who are ready to tackle the world’s most pressing societal and industrial challenges. The program develops world-class researchers who can capitalize on the most promising discoveries and innovations to develop interdisciplinary solutions for real-world challenges.

Microsystems engineering: The integration of entire systems into micron-scale devices and the sensing technology to interface these devices to the real world is the core emphasis of the Microsystems engineering doctoral program. These systems are at the core of the next generation of technology. Within the past decade, microsystems (micro-optical, micro-electrical, and micro-mechanical systems) have emerged as a critical technology worldwide and this dynamic field is positioned for outstanding growth in the future.

Sustainability: The first program in the world to focus on sustainable production, the doctorate in sustainability focuses on sustainable production systems—systems that create goods and services using processes that are non-polluting; conserving of energy and natural resources; economically viable; and safe and healthful for workers, communities, and consumers. This program also serves to advance research and education in alternative-energy development, sustainable design, green product development, industrial ecology, and pollution prevention.

Leaders in research
Research is a driving force in the university, engaging more than 2,700 students in hands-on research opportunities in each of our colleges. These opportunities combine classroom learning with laboratory discovery, which enhances each student’s education and builds powerful skills that are applicable in a wide range of career paths.

At the core of our doctoral programs is a focus on research, which is intensive and demanding. It is this successful resolution of societal problems that leads to deep professional and personal fulfillment as new discoveries are made and applications are developed. Ph.D. students from a range of academic backgrounds work with world-renowned faculty who are leaders in their fields of study. A focus on teamwork, research, and the intersection of the disciplines gives students the opportunity to collaborate with others, share ideas, and develop innovative solutions using emerging technologies.

We build on our strengths when creating doctoral programs, emphasize research across disciplines, and rely on our interdisciplinary faculty to produce the next generation of educators and researchers with the ability to develop solutions to real world problems.

RIT Research Centers and Organizations
RIT is home to more than 50 interdisciplinary research centers, institutes, and organizations that bring together faculty and students from across the university. These entities explore a wide range of topics and cover everything from business and entrepreneurship to biomedical sciences, nanolithography, printing, social computing, remanufacturing, Microsystems fabrication, environmental sustainability, and visual perception. Learn more about RIT’s key research centers and institutes online at rit.edu/research/centers-and-institutes.
The College of Art and Design offers the most comprehensive graduate imaging programs in the world, encompassing design, science, technology, engineering, management, crafts, fine arts, and art education. Six of our visual arts programs are among the top 12 in the nation. The college is a diverse, world-class collaboration of five schools: American Crafts, Art, Design, Film and Animation, and Photographic Arts and Sciences. Its scope gives students a perspective that can be found nowhere else—a place where some students create fine art using centuries-old methods while others push the edges of digital creativity. At no other university can students explore so many different aspects of the imaging fields to a high level of professional excellence. In addition, the college offers expertise in the professional operations of running a studio or gallery.

Please visit the college's website—www.rit.edu/artdesign—for in depth information on academics, faculty, facilities, research initiatives, advising, and more.

Admission requirements
Admission to graduate programs in the College of Art and Design requires a combination of academic performance and creative visual skills that are evaluated via a portfolio review. Faculty review each student’s portfolio to evaluate creative visual skills as well as the potential for success in the student’s selected program.

Portfolio requirements: The following MFA programs require the submission of a portfolio that is used to assess applicants’ performance and academic capabilities: ceramics, film and animation, fine arts studio, glass, industrial design, metals and jewelry design, furniture design, photography and related media, and visual communication design. The MST in art education also requires a portfolio.

For the most up-to-date information on portfolio requirements, including requirements by program and submission information, please visit https://www.rit.edu/artdesign/portfolio-requirements.

Financial aid and scholarships
Please refer to the Financial Aid and Scholarship section of this bulletin for information regarding financial aid, scholarships, grants, loans, and graduate assistantships.
Ceramics, MFA

www.rit.edu/study/ceramics-mfa

Jane Shellenbarger, Associate Professor
jmssac@rit.edu

Program overview

The MFA in ceramics develops your intellectual and artistic thinking through an extensive curriculum. You will rigorously examine the work of historical and contemporary artists and craftspeople as you expand your knowledge of the techniques within the ceramics field. In-depth critiques give you a deep understanding of your own work as well as your peers to enhance your artistic expression and personal voice. Earning your degree in ceramics will deepen your understanding of aesthetics, forming processes, and fine art theory as it further enhances your career in ceramics.

What is Ceramics?

Ceramics is an artistic craft in which objects from earthenware, stoneware, and porcelain (including pottery, vases, bowls, sculptures, tiles, and more) are created and shapes using a mixture of clay, silica, feldspar and other materials. Once an object has been created, it is fired in a kiln, or a high temperature oven. Afterwards, may ceramic objects are then decorated with paints, glazes, and other finishing materials.

MFA in Ceramics

RIT’s MFA in ceramics focuses on artistic development through an intensive teaching of the aesthetics and techniques of ceramic design. Graduate studio courses, seminar courses, and in-depth critiques, in conjunction with thesis planning and implementation, provide students with a deep understanding of not only their own work but the work of other students and their peers. Students examine the creativity, perceptions, aesthetics, and criticism of the work of contemporary artists and craftspeople in courses and discussions. This tracks students’ progress towards the final thesis presentation, which is completed when a formal critique and evaluation is performed by the thesis committee.

Studio Residency Program

The School for American Crafts offers a Studio Residency Program for students in ceramics, furniture design, glass, and metals and jewelry design. Residence positions are limited and are awarded after the review of all applicants’ portfolios, transcripts, and references. An interview is required. Accepted residents are required to register for one independent study credit during each semester of residence.

Accepted residents are expected to be present in their assigned studio during class hours and to contribute up to 10 hours of work per week in the main studio. These work hours are coordinated and overseen by the faculty in the resident’s discipline. In exchange, the school will provide workspace, access to facilities, and supportive instruction. The resident is invited to participate in the full range of studio activities.

Participants may be those seeking additional studio experience prior to undergraduate or graduate study, early career professionals, or teachers on leave who wish to work again in an academic studio environment. The faculty in each discipline will make decisions concerning appropriate candidates.

Inquiries should be made to the Studio Residency Program, School for American Crafts, College of Art and Design, Rochester Institute of Technology, 73 Lomb Memorial Drive, Rochester, NY 14623-5603.

Experiential Learning

Cooperative Education and Internships

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Co-ops and internships take your knowledge and turn it into know-how. Your art and design co-ops will provide hands-on experience that enables you to apply your artistic capabilities in dynamic professional settings while you make valuable connections between classwork and real-world applications.

Cooperative education, internships, and other experiential learning opportunities are strongly encouraged for graduate students in the MFA in ceramics.

Admission requirements

This program is available on-campus only.

Offered Full-time
Full-time Application Deadline: February 1 priority deadline, rolling thereafter
Full-time STEM Designated: No

Offered Part-time
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.
Application Details

To be considered for admission to the Ceramics program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Submit a portfolio. Requirements are listed on the Graduate Admissions website.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

<table>
<thead>
<tr>
<th>Test</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOEFL</td>
<td>79</td>
</tr>
<tr>
<td>IELTS</td>
<td>6.5</td>
</tr>
<tr>
<td>PTE Academic</td>
<td>56</td>
</tr>
</tbody>
</table>

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Film and Animation, MFA

[www.rit.edu/study/film-and-animation-mfa](http://www.rit.edu/study/film-and-animation-mfa)

Kevin Bauer, Senior Lecturer
585-475-7403, kmbpph@rit.edu

Program overview

The film and animation MFA is supported by highly specialized faculty from RIT’s photography, imaging science, computer science, information technology, and design programs. This program is offered by the School of Film and Animation which houses state-of-the-art facilities, including full production facilities.

While achieving your master’s in film and animation, you will join a collaborative environment with highly-trained faculty and state-of-the-art production facilities. The program is connected to MAGIC Spell Studios, which offers you industry and commercial experience as you pursue your degree.

RIT’s Film and Animation Master’s Degree

The MFA in film and animation offers four options:

1. 2D Animation: Concentrate on both traditional or digital animation as well as stop-motion animation. Courses focus on teaching the fundamentals of animation, 2D mechanics, all aspects of pre-production, and stop-motion fabrication techniques.

2. 3D Animation: Learn all aspects of the 3D animation pipeline. Courses focus on 3D animation, modeling, lighting, texturing, and rendering. You may also explore working in VR or with virtual production techniques.

3. Production: Develop and refine your creative approach to fictional narrative, documentary, and experimental live-action filmmaking. Courses focus on directing, sound recording, screenwriting, cinematography, and editing.

All four options require two years of course work and a third year focused on a thesis film or script. All students create and screen finished films in their first two years.

Electives: Elective courses are available in animation, film, video, multimedia, screenwriting, printmaking, painting, sculpture, communication design, museum studies, crafts, bookmaking, typography, color photography, new media, studio photography, advertising photography, perception, gaming, computer graphics, art history, and archival preservation and conservation. There are also opportunities for independent studies, internships, and concentrations.

Thesis: Specific instructions pertaining to the thesis are available in the “MFA Guide for Students and Faculty: Policy Regarding Student Work.” The School of Film and Animation reserves the right to retain copies of student-produced films to be used for educational purposes, to show to prospective students, and as examples of student productions.

Screenings: Screenings are required for all student-produced films and are coordinated through the professor or the thesis chair.
Experiential Learning

Cooperative Education and Internships

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Co-op and internships take your knowledge and turn it into know-how. Co-op in the College of Art and Design provides hands-on experience that enables you to apply your artistic capabilities in dynamic professional settings while you make valuable connections between classroom and real-world applications.

Cooperative education, internships, and other experiential learning opportunities are optional but strongly encouraged for graduate students in the MFA in film and animation.

Admission requirements

This program is available on-campus only.

Offered Full-time
• Full-time Admit Term(s): Fall
• Full-time Application Deadline: February 1 priority deadline, rolling thereafter
• Full-time STEM Designated: No

Offered Part-time
• Part-time Admit Term(s): Fall
• Part-time Application Deadline: Rolling
• Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Film and Animation program, candidates must fulfill the following requirements:
• Complete an online graduate application.
• Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
• Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
• A recommended minimum cumulative GPA of 3.0 (or equivalent).
• Submit a current resume or curriculum vitae.
• Submit a personal statement of educational objectives.
• Submit two letters of recommendation.
• Entrance exam requirements: None
• Submit a portfolio. Requirements are listed on the Graduate Admissions website.
• Writing samples are optional.
• Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores
International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

TOEFL: 88
IELTS: 6.5
PTE Academic: 60

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid
An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Fine Arts Studio, MFA
www.rit.edu/study/fine-arts-studio-mfa
Robin Cass, Professor
585-475-2683, racsac@rit.edu

Program overview
The MFA in fine arts studio is committed to collaboration and interdisciplinary approaches both within the four major fine arts areas of study (painting, printmaking, sculpture, or expanded forms) and the entire College of Art and Design.

What is Fine Arts?
Fine arts refers to creating artwork through painting, sculpture, printmaking, illustration, expanded forms, and other visual arts. Those earning an MFA in fine arts work as artists, art educators, art instructors, curators, gallery directors, archivists, or administrators of arts and cultural institutions.

RIT’s Master’s in Fine Arts
The MFA in fine arts studio is a rigorous two-year program comprised of major studio courses; studio electives such as glass, ceramics, film, and photography; theory and research seminars; as well as thesis credits. The program’s structure allows for personal growth, experimentation, collaboration, and unique, non-discipline-specific results to occur in the thesis, which is a public exhibition of the student’s work. Courses are meant to concentrate on creative visual work while also thinking about making and sustaining a dialogue.

Experiential Learning

Cooperative Education and Internships
What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Co-ops and internships take your knowledge and turn it into know-how. Your art and design co-ops will provide hands-on experience that enables you to apply your artistic capabilities in dynamic professional settings while you make valuable connections between classwork and real-world applications.

Cooperative education, internships, and other experiential learning opportunities are strongly encouraged for graduate students in the MFA in fine arts studio.

Furniture Design, MFA

www.rit.edu/study/furniture-design-mfa
Rolf Hoeg, Lecturer
rehsac@rit.edu

Program overview

The master’s in furniture design is structured to support your individual interests and aesthetic development. While engaging in the design and construction of a range of furniture objects, you will be challenged to advance your aesthetic, conceptual, and design sensibilities while simultaneously strengthening your building techniques and construction strategies. You will be exposed to a broad range of contemporary practices and creative approaches to design and art-making in support of experimentation, critical reflection, and the development of your personal aesthetic and design philosophy.

RIT’s Master’s in Furniture Design

The first year of the furniture design degree exposes you to a broad range of critical issues related to the conception and production of art, serves to inspire and provoke your critical reflection, and facilitates the development of your preliminary thesis topic. You will spend ample time creating work, while you strengthen your woodworking techniques, design fundamentals, and your sense of personal creative expression. In the second year, you will continue to refine your work aesthetic as you propose and fully engage in a thesis project. You will work with RIT’s gallery coordinators and curators to install and exhibit a final body of work.

Furniture Design Scholarship Available

The Beth and Ira Nash Endowed Scholarship is available to qualified applicants applying to the master’s in furniture design. Learn more about the Beth and Ira Nash Endowed Scholarship, including application deadlines and how to apply.

Studio Residency Program

The School for American Crafts offers a Studio Residency Program for students in ceramics, furniture design, glass, and metals and jewelry design. Residence positions are limited and are awarded after the review of all applicants’ portfolios, transcripts, and references. An interview is required. Accepted residents are required to register for one independent study credit during each semester of residence.

Accepted residents are expected to be present in their assigned studio during class hours and to contribute up to 10 hours of work per week in the main studio. These work hours are coordinated and overseen by the faculty in the resident’s discipline. In exchange, the school will provide workspace, access to facilities, and supportive instruction. The resident is invited to participate in the full range of studio activities.

Participants may be those seeking additional studio experience prior to undergraduate or graduate study, early career professionals, or teachers on leave who wish to work again in an academic studio environment. The faculty in each discipline will make decisions concerning appropriate candidates.

Inquiries should be made to the Studio Residency Program, School for American Crafts, College of Art and Design, Rochester Institute of Technology, 73 Lomb Memorial Drive, Rochester, NY 14623-5603.

Experiential Learning

Cooperative Education and Internships

Glass, MFA

www.rit.edu/study/glass-mfa
David Schnuckel, Assistant Professor
585-208-0178, dassac@rit.edu

Program overview

Develop your personal creative voice through intensive research, discussion, critique, and experimentation in glass. In this glassblowing master’s degree you are given full access to a complete glass facility and individual studio space. Graduate studio courses, seminar courses, and in-depth critiques give you a deeper understanding of the craft of glass as you design pieces that flourish your personal expression.

Glassblowing Classes and More

The MFA in glass is a two-year program of study. An individual studio space serves to strengthen your technique and practice in designing glass artwork that reflects your personal expression of the medium. Graduate studio courses, seminar courses, and in-depth critiques are offered in conjunction with thesis planning and implementation to provide you with a deep understanding of glass. In addition to course work and creative production, you are exposed to a broad range of critical issues related to the conception and production of art, to inspire and provoke critical reflection and facilitate the development of a thesis exhibition and supporting documentation.

World-Class Glass Hot Shop and Facilities

You’ll spend time creating in a range of top facilities designed for you to explore, learn, and develop your glass blowing and flameworking techniques. Many glassblowing classes take place in the Glass Hot Shop, where you will physically work with glass in its molten state in solid working, glass-blowing, and hot casting. In the Glass Flameworking Studio you’ll work intimately with glass rod and tubing at the torch. The Glass Cold Shop is a studio designated for processes that alter glass after it has been annealed. Each student is also assigned a Glass Workspace, designated areas for our advanced-level glass majors to have their own personal studio space to support the development of their individual research interests and creative work.

Studio Residency Program

The School of Art and the School for American Crafts are seeking candidates interested in pursuing glass-related research while contributing to the creative community of the glass program and the College of Art and Design. Learn more about the Glass Studio Residency Program, including details on how to apply.

Experiential Learning

Cooperative Education and Internships

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. Industrial Design, MFA

www.rit.edu/study/industrial-design-mfa
Stan Rickel, Associate Professor
585-475-4745, srrfaa@rit.edu

Program overview

Form, function, and experience tell a story of considered design and the best possible outcome. The industrial design master’s will enhance your career success by further developing your knowledge in design processes and technology. This project-based program allows you to explore design theory, design history, and human-centered design. You will conduct unique research on various topics of interest, which will further your understanding of the industry and society. As you conclude your studies, you will obtain hands-on experience in technical competence, analytical thought, sustainability, and transdisciplinary collaboration, all key to fueling your career.

RIT’s Master’s in Industrial Design

The industrial design MFA is for career enhancement or redirection. The educational experience is project-oriented, requiring research into design methods and technologies. Cross-disciplinary collaborations provide an experiential dimension.

The first year of study includes seminar courses in design history and research, which are common to all graduate students in the School of Design. In addition, studio courses involve extensive design work with respect to sustainability, design process, the meaning of artifacts, and critical analysis. Additional course work using three-dimensional software for modeling and fabrication fills out the program.

In the second year students conduct research and develop a thesis project, which is presented in a graduate thesis exhibition or presentation, and is documented in a written thesis report.

Experiential Learning

Cooperative Education and Internships

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Co-ops and internships take your knowledge and turn it into know-how. Your art and design co-ops will provide hands-on experience that enables you to apply your artistic capabilities in dynamic professional settings while you make valuable connections between classwork and real-world applications.

Cooperative education, internships, and other experiential learning opportunities are encouraged for graduate students in the MFA in industrial design.

Creative Industry Day

RIT’s Office of Career Services and Cooperative Education hosts Creative Industry Day, which connects students majoring in art, design, film and animation, photography, and select computing majors with companies, organizations, creative agencies, design firms, and more. You’ll be able to network with company representatives and interview directly for open co-op and permanent employment positions.

Admission requirements

This program is available on-campus only.

Offered Full-time
Full-time Admit Term(s): Fall
Full-time Application Deadline: February 1 priority deadline, rolling thereafter
Full-time STEM Designated: No

Offered Part-time
Part-time Admit Term(s): Fall
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Industrial Design program, candidates must fulfill the following requirements:

• Complete an online graduate application.
• Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
• Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
• A recommended minimum cumulative GPA of 3.0 (or equivalent).
• Submit a current resume or curriculum vitae.
• Submit a personal statement of educational objectives.
• Submit two letters of recommendation.
• Entrance exam requirements: None
• Submit a portfolio. Requirements are listed on the Graduate Admissions website.
• Writing samples are optional.
• Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

TOEFL: 88
International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant's need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Integrative Design, MS

www.rit.edu/study/integrative-design-ms

Stan Rickel, Associate Professor
585-475-4745, srrfaa@rit.edu

Program overview

The MS degree in integrative design is not accepting applications at this time. However, if you are interested in understanding and developing the theories, methods, and processes of design and their application in product and service development, we encourage you to explore our master's degrees in industrial design or visual communication design.

The integrative design program enables students with artistic, technical, engineering, and management backgrounds to study and successfully engage with creative development teams. This one-year design master's degree develops your understanding of the theories, methods, and processes of design and their application in product and service development.

A Design Master's Degree

The MS in integrative design establishes a variety of creative design thinking techniques in areas such as systems thinking, brainstorming, immersions, contextual relevance, and empathy—all of which will be used to develop an in-depth understanding of the design process, the product/service life cycle, product/service feasibility, and the integration of social responsibility in product/service design. The program enables students with artistic, technical, engineering, and management backgrounds to study and successfully engage within creative development teams.

Media Arts and Technology, MS

www.rit.edu/study/media-arts-and-technology-ms
Bob Rose, Associate Professor
rmrpph@rit.edu

Program overview
Graphic communication increases a business's effectiveness in communicating ideas, instructions, and concepts. Today's organizations need professionals who understand the value of information design and recognize the many ways it can be used to positively impact the bottom line. In the media arts and technology program, you will learn to leverage emerging digital technologies to your advantage. With a management focus, technical expertise, and comprehensive knowledge of how to drive the graphics process from concept through completion, you will be an attractive prospect in a wide range of industries, including education, engineering, marketing, research science, human resources, public relations, and more.

A Media Master's Degree Designed for Today's Digital Environment

Media arts and technology is a one-year media master's degree in which you will develop relevant knowledge and skills with a technical emphasis and a business-oriented approach. You will learn to recognize new ways of operating and identifying emerging technologies to meet and exceed evolving market demands, and you'll become a leader in the improvements of cross-media products and processes. The program provides you with the ability to create meaningful and measurable changes in graphic communications through applied cross-media initiatives. The degree requires a capstone project that allows you to develop and demonstrate in-depth knowledge in a specific topic area. Led by senior faculty, the capstone project is designed to prepare you to showcase your knowledge of innovation in today's rapidly evolving media landscape.

Digital Media Courses

The media arts and technology degree includes a curriculum that concentrates on the latest digital technologies, processes, and strategies that allow you to employ a deep knowledge of print, web, mobile, and social media workflows to solve communication problems. You will:
- understand the creation, workflow, and output of digital media files, using a range of media devices including digital cameras, smartphones, 2D/3D scanners, and audio and video recording devices;
- gain an overview of critical trends and issues related to the graphic communications and imaging industries;
- explore and understand digital asset and content management;
- learn concepts in project management as they apply to leading cross-media projects and teams; and
- examine how media has evolved and how it has responded to changes in digital technology and social habits.

Elective courses enable you to explore additional areas of interest in graphic communication, media arts and sciences, and digital technologies. The diverse expertise of our faculty assures a breadth of relevant experience on issues and trends across the graphic communications field. The program aims to create a collaborative environment where you will combine course work with access to faculty expertise, staff support, and extensive facilities to extend your current knowledge base.

As part of RIT’s media master’s degree, you’ll complete a capstone project, which enables you to design, develop, and demonstrate your extensive knowledge in a specific topic related to graphic communications.
You’ll complete original work through experiments, comprehensive case studies, surveys, focus groups, and research analysis. Outcomes from the capstone experience result in tangible solutions, such as the innovation of a process, recognizing unmet customer needs, solving cross-media issues, or identifying resources required for business transformation or media solutions.

Metals and Jewelry Design, MFA
www.rit.edu/study/metals-and-jewelry-design-mfa
Juan Carlos Caballero-Perez, Professor
585-475-2654, jcc2390@rit.edu

Program overview
The MFA in metals and jewelry design is a professional degree for practicing artists, craftspersons, or designers who desire to leave a lasting impression on their fields through devotion to their work and the high standards of discipline and artistic ideals. By immersing yourself in soldering, fabrication, stone setting, silversmithing, forging, and casting, this jewelry design degree will develop your knowledge and deepen your experience working with different theories and materials while you are challenged to think unconventionally in order to redefine industry standards.

RIT’s Jewelry Master’s Degree
The MFA in metals and jewelry design is generally a two-year, full-time degree that involves the presentation of a thesis. You will spend ample time creating work as you strengthen your metals techniques, design fundamentals, and personal expression while also exploring the process of critical analysis of your studio work. You will also gain deep knowledge in gallery administration and operations, and you’ll participate in gallery and museum visitations and research.

Jewelry Design Courses
The jewelry design degree provides you with broad exposure to metalworking techniques, expands your knowledge of applied design, strengthens perceptual and philosophical concepts, and develops your individual modes of expression. This sequence leads to a master’s thesis, where you will work with RIT’s gallery coordinators and curators to install and exhibit a final body of work you created over the course of the program. You will also learn the business side of art, including portfolio management, pricing, marketing strategies, and public relations—all skills needed by artists who embark on a professional career as a studio artist.

Studio Residency Program
The School for American Crafts offers a Studio Residency program for students in ceramics, furniture design, glass and metals and jewelry design. Residence positions are limited and are awarded after the review of all applicants’ portfolios, transcripts, and references. An interview is required. Accepted residents are required to register for one independent study credit during each semester of residence.

Accepted residents are expected to be present in their assigned studio during class hours and to contribute up to 10 hours of work per week in the main studio. These work hours are coordinated and overseen by the faculty in the resident’s discipline. In exchange, the school will provide workspace, access to facilities, and supportive instruction. The resident is invited to participate in the full range of studio activities.

Participants may be those seeking additional studio experience prior to undergraduate or graduate study, early career professionals, or teachers on leave who wish to work again in an academic studio environment. The faculty in each discipline will make decisions concerning appropriate candidates.

Inquiries should be made to the Studio Residency Program, School for American Crafts, College of Art and Design, Rochester Institute of Technology, 73 Lomb Memorial Drive, Rochester, NY 14623-5603.

Experiential Learning

Cooperative Education and Internships
What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Co-ops and internships take your knowledge and turn it into know-how. An art and design co-op provides hands-on experience that enables you to apply your artistic capabilities in dynamic professional settings while you make valuable connections between classwork and real-world applications.

Cooperative education, internships, and other experiential learning opportunities are encouraged for graduate students in the MFA in metals and jewelry design.

www.rit.edu/study/non-toxic-printmaking-adv-cert

Robin Cass, Professor
585-475-2683, racsac@rit.edu

Program overview

Technical training and retraining for artists and printmaking professionals seeking a comprehensive working knowledge of non-toxic printmaking techniques, including a study of methodology and aesthetic applications. In the advanced certificate in non-toxic printmaking, you’ll learn the fundamentals of print creation, and applied skills for current and emerging industry and career demands. Students incorporate industry best practices and principles through the design and production of printmaking projects.

What is a Graduate Certificate?

A graduate certificate, also called an advanced certificate, is a selection of up to five graduate level courses in a particular area of study. It can serve as a stand-alone credential that provides expertise in a specific topic that enhances your professional knowledge base, or it can serve as the entry point to a master’s degree. Some students complete an advanced certificate and apply those credit hours later toward a master’s degree.

Photography and Related Media, MFA

www.rit.edu/study/photography-and-related-media-mfa
Joshua Thorson, Associate Professor
jjtpph@rit.edu

Program overview

RIT’s graduate degree in photography emphasizes an expansive interpretation of photography as a conceptual art form, with the intention of engaging and nurturing the individuality of each student in their continued development as innovative, critical artists in the world. Successful completion of the MFA in photography enables you to become a successful visual artist and to seek careers in education, archives, museum or gallery work, and as a professional photographer.

MFA in Photography

RIT’s MFA in photography is among the best photo schools in the country. We are ranked 6th by U.S. News & World Report (2022) as one of the best fine arts school for a graduate degree in photography.

In the photography MFA, you’ll refine your technical and artistic photographic skills while you create a new body of work. Ample time is spent creating work and refining your personal artistic vision. Elective courses are available in dynamic areas such as video, printmaking, painting, sculpture, communication design, crafts, bookmaking, graphic design, new media, computer graphics, art history, and archival preservation and conservation. Students also have opportunities to enhance their studies through independent studies and internships.

Graduate Photography Thesis

Your MFA in photography culminates in a graduate thesis exhibition, where you will install and exhibit an original body of work. The thesis publication is documentation of the thesis project, which must be submitted in digital form. It must contain an extended artist statement and a presentation of the majority of thesis artwork. The thesis defense is a public presentation made by the student, in explanation of the thesis project, creative research, and exhibition.

Photography Faculty

Eleven full-time faculty members, all critically regarded for their artistic work in exhibition and publication, contribute to the MFA in photography. The faculty brings individual expertise and dedication to their work with graduate students, encouraging intellectual inquiry of contemporary art-making practices and aesthetics. The MFA in photography is supported by a staff of 30 full-time faculty members from the RIT’s School of Photographic Arts and Sciences and School of Art; adjunct faculty members from George Eastman Museum; as well as noted regional, national, and international practitioners, critics, and historians.

World-Class Photography Studios and Facilities

You’ll spend time creating in a range of top facilities designed for you to explore, learn, and develop your photography skills and techniques. The William Harris Gallery supports the exhibition of graduate thesis work, student work, and the works of contemporary image-makers. It maintains a calendar of exhibitions, public lectures, and receptions. Importantly, it also provides real-world experience for graduate students to learn firsthand about gallery operations, installation, and marketing and communications as a gallery manager or staff member.

The Photo Cage puts state-of-the-art photography equipment right at your fingertips. It includes a range of equipment you can checkout for
your use, including cameras (DSLR, film, medium- and large-format), video cameras, and camera accessories including lights, audio recorders, computers, monitors, tripods, rigs, cine rails, and more.

In addition to gallery spaces, students have open access to dedicated studio spaces and world-class imaging equipment, including:

- Professional gallery spaces
- Kreonite analog color processor
- Lambda digital chromogenic processor
- Alternative process facilities and chemicals
- Black and white and color darkrooms
- Lighting studios
- 35mm, medium, and large format film cameras
- Video equipment, such as Ronin stabilizers, dollies, and more
- Sound equipment and dedicated recording studio
- Access to printmaking, glass, woodshop, and other art-making facilities

* CAD Studio Elective refers to any graduate level course in the College of Art and Design that includes a studio component.
** Professional Elective refers to graduate studio courses offered in the Photography and Related Media program (PHGR).

Accreditation

The MFA program in photography and related media is accredited by the National Association of Schools of Art and Design (NASAD).

Admission requirements

This program is available on-campus only.

Offered Full-time
- Full-time Admit Term(s): Fall
- Full-time Application Deadline: February 15 priority deadline, rolling thereafter
- Full-time STEM Designated: No

Offered Part-time
- Part-time Admit Term(s): Fall
- Part-time Application Deadline: Rolling
- Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Photography and Related Media program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- A personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Submit a portfolio. Requirements are listed on the Graduate Admissions website.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 88
- IELTS: 6.5
- PTE Academic: 60

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.
Visual Arts–All Grades (Art Education), MST

Program overview
When does an artist become a teacher? The MST in visual arts–all grades (art education) prepares you to teach the next generation of artists and to create art experiences while honoring your own artistic skills.

An Accelerated Visual Arts Education Program
RIT’s art education master’s degree is an accelerated visual arts education program. You will get a year of hands-on experience that will heavily mirror your life as an art educator. The program prepares you for a teaching career by embedding certifications and job placement support right into the curriculum. You will work with regional schools to find the best fit for your personality, talents, and teaching goals.

RIT’s Art Education Master’s Degree
In the MST degree, you’ll complete course work in:

• child development in art and education,
• differentiated learning techniques for effective instruction in the diverse learning needs of all students,
• a range of perspectives on multicultural issues in the visual arts and education fields,
• the process of teaching art in the school classroom, including curriculum development and student assessment, and
• explore a range of perspectives on contemporary theories in art and education.

In addition, you will complete a student teaching practicum designed to provide you with in-depth pedagogical experiences, real-world challenges, and rich learning opportunities.

RIT’s art education master’s degree leads to Initial/Professional New York State certification in visual arts for PK through 12th grades. This certification allows applicants to teach in New York State public schools and most other states through reciprocal agreements. The program features pedagogical studies, studio inquiry, clinical fieldwork, and community partnerships. The MST program prepares candidates to meet the national, state, and regional needs of teachers of the visual arts. Curriculum and experiential learning are designed to provide candidates opportunities to teach effectively with positive impacts on diverse PK through 12 grade student learning and development, through the application of content knowledge, foundational pedagogical skills, and technology integration. The program is nationally accredited and is for candidates who hold a BFA or BA in an area of art (studio, design, new media, or photography majors). Graduates of the last three MST classes have a 97 percent pass rate on the New York State Department of Education certification examinations, initial certification, and job outcome rates.

**Visual Communication Design, MFA**

www.rit.edu/study/visual-communication-design-mfa

Mike Strobert, Senior Lecturer  
585-475-5608, mpsfaa@rit.edu

**Program overview**

This visual communication degree offers a comprehensive opportunity to investigate the intersection of graphic, interaction, and motion design. You will focus on conceptualizing and creating user-centered design wherever there is a screen or digital experience. This can include mobile phones, automotive instrument panels, medical devices, wearables, and more. This major reinforces the importance of user experience design by combining insight from all areas of design. Choose to focus your studies or combine course sequences from communication design, interaction design, motion design, and design studies. By combining historical, communication and aesthetic theory, principles, and creativity, your work will anticipate design evolution and lead innovation.

The MFA in visual communication design focuses on all areas of design, including graphic design, user experience/interaction design, design studies, motion graphics, and 3D digital design. The changing landscape of people’s everyday interactions has blurred the lines between respected design fields, giving designers new responsibilities to shape experiences. The MFA program embraces this new technology through its curriculum, which addresses these merging skill sets.

**An Integrated Visual Communication Design Degree**

The MFA in visual communication design provides a learning environment for the advancement in innovative research, user-centered design, and professional practice by focusing on the creative potentials of visual communication through a full spectrum of media. You will advance your design knowledge and technical skills by choosing an option in communication design, interaction design, or motion and 3D digital design.

The cross-disciplinary nature of the program offers a greater potential to foster innovation and creativity in visual communication design. The program reflects the current views and changes occurring in the professional design field. The skill sets required of graphic, interactive, and digital design have now crossed over and are interrelated.

**Experiential Learning**

**Cooperative Education and Internships**

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Co-ops and internships take your knowledge and turn it into know-how. Co-op in the College of Art and Design provides hands-on experience that enables you to apply your artistic capabilities in dynamic professional settings while you make valuable connections between classroom and real-world applications.

Cooperative education, internships, and other experiential learning opportunities are encouraged for graduate students in the MFA in visual communication design.
Creative Industry Day

RIT’s Office of Career Services and Cooperative Education hosts Creative Industry Day, which connects students majoring in art, design, film and animation, photography, and select computing majors with companies, organizations, creative agencies, design firms, and more. You'll be able to network with company representatives and interview directly for open co-op and permanent employment positions.

Success in the 21st century business environment requires leadership and management attuned to rapid changes in technology and increasingly vigorous global competition. Astute problem solvers who have gained a systems perspective must be able to convert product development and management challenges into competitive advantages. Saunders College of Business offers a portfolio of comprehensive, vigorous programs of study. Our innovative, multidisciplinary curriculum—embedding an international perspective and current technology throughout—produces graduates able to convert managerial learning into pragmatic business applications.

Please visit the college’s website—www.rit.edu/business—for in depth information on academics, faculty, facilities, research initiatives, advising, and more.

### Admission requirements
The college offering the program makes all decisions on graduate admission. Please refer to each individual program for information regarding specific admission criteria. For general graduate admission information, please refer to the Admission section of this bulletin.

### Financial aid and scholarship
Please refer to the Financial Aid and Scholarship section of this bulletin for information regarding financial aid, scholarships, grants, loans, and graduate assistantships.

### Accreditation
Saunders College of Business is accredited by the Association to Advance Collegiate Schools of Business (AACSB International).

### Accounting and Analytics, MS

[www.rit.edu/study/accounting-and-analytics-ms](www.rit.edu/study/accounting-and-analytics-ms)

Matthew Cornwell, 585-475-6916, mcornwell@saunders.rit.edu

#### Program overview

Accounting analytics can help an organization answer financial questions by looking at all the data gathered by a company (e.g., transactional data, financial data, investment analysis, etc.) and analyzing this information to gain significant insights, predict future outcomes, or even ascertain risk.

#### Data Analytics for Accounting: Why Financial Data Matters

There are four key types of data analytics—descriptive, diagnostic, predictive, and prescriptive—and each has a role in helping an accountant report on activity happening within an organization. All four of these types of data can be used to create a full picture of what’s happening within a business, what decisions can and should be made, and where growth opportunities lie.

- Descriptive analytics tell us what is happening. Descriptive analytics categorizes and classifies a range of information. Accountants can use this trove of data to report on what is happening within a company, from cash flow, revenue and expenses, and inventory, to website traffic and social media analytics.
- Diagnostic analytics tell us why something happened. Accountants are skilled at using data to create forecasts and predict trends. Diagnostic analytics is the use of data to determine the causes of trends and the correlations between any number of variables. For example, diagnostic analytics can help examine market demand for a product, can provide insight into why a product’s sales are up or down, or they can help explore correlation or causation between variables.
- Predictive analytics tell us what’s going to happen. Will a key piece of machinery break down? Will an organization have enough cash flow in nine months? Should a company anticipate different staffing needs during a specific time period? Predictive analytics helps accountants examine data to forecast a range of different scenarios that can impact drive strategic decision making.
- Prescriptive analytics tell us what we should do next. Prescriptive analytics is data-driven decision-making. It’s the use of data to determine a course of action. Social media applications use predictive analytics to determine what content to serve you based on your engagement with past content. Banks analyze transaction histories in order to identify fraud. Data on consumer behavior and shopping patterns can determine new product lines and product improvements. Prescriptive analytics can also point to problems that may arise or decision paths to avoid going down.

#### RIT’s Accounting Analytics Degree

In RIT’s master’s in accounting analytics, you’ll develop analytics skills to conduct descriptive, diagnostic, predictive, and prescriptive analysis of accounting information. The program pulls together key areas of technology, finance, strategy, analytics, data modeling, and more to help you advance your accounting career.

This innovative accounting analytics program teaches you how technologies and business analytics are used in the accounting profession, with a specific focus on:

- Hands-on experience working with data-science oriented computing languages such as R and Python

- Working knowledge of databases in Structured Query Language (SQL) and Systems Applications and Products in Data Processing (SAP)

- Data visualization skills, such as Tableau

- Understanding of essential technologies such as blockchain

As an accountant or business professional seeking career advancement, you’ll benefit from the accounting analytics courses in areas that are making a significant impact on today’s business operations, including big data, AI, and advanced analytics based on the foundation of accounting and auditing. You’ll be taught business analytics and technology skills by faculty who teach in RIT’s nationally ranked program in management information systems.

#### Analytics for Accountants

Accounting has become quantitative and technology-infused. As a result, an accounting analytics degree can help you manage internally- and externally-collected data, and analyze it in ways that help your organization grow, respond to change, meet consumer exceptions, make financial decisions, and predict and forecast the future. Graduates of RIT’s master’s in accounting analytics are in demand and work for dynamic companies in every single industry.

#### Experiential Learning

#### Cooperative Education and Internships

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Co-ops and internships take your knowledge and turn it into know-how. Business co-ops provide hands-on experience that enables you to apply your knowledge of business, management, finance, accounting, and related fields in professional settings. You’ll make valuable connections between course work and real-world applications as you build a network of professional contacts.

Students in the accounting and analytics MS are encouraged to participate in at least one cooperative education or internship experience.

Admission requirements

This program is available on-campus only.

Offered Full-time
Full-time Admit Term(s): Fall
Full-time Application Deadline: Rolling
Full-time STEM Designated: Yes
Offered Part-time
Part-time Admit Term(s): Fall or Spring
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Accounting and Analytics program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Letters of recommendation are optional.
- Entrance exam requirements: GRE or GMAT required for individuals with degrees from international universities. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

TOEFL: 88
IELTS: 6.5
PTE Academic: 60

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

www.rit.edu/study/accounting-and-financial-analytics-adv-cert

Matthew Cornwell,
585-475-6916, mcornwell@saunders.rit.edu

Program overview

Today’s accounting and finance professionals are now expected to serve as business partners and experts who can use data analytics to inform recommendations on business strategy. RIT’s accounting analytics certificate provides you with knowledge in data science and statistical analysis so that you—as an accounting and finance professional—can mine and analyze data to apply it in ways that benefit and improve business operations and outcomes.

RIT’s Financial Analytics Certificate: On-Campus or Online

Developed and taught by RIT’s esteemed faculty in Saunders College of Business, the advanced certificate in accounting and financial analytics provides knowledge in data science and statistical analysis so accounting and finance professionals can mine and analyze data to improve business strategy, operations, and outcomes.

Designed for working professionals studying part-time, you may complete this graduate certificate in 12 months. The program is available both online and on-campus. The analytics courses offered focus on a variety of applications across various business disciplines.

Financial Analytics Courses

The accounting analytics certificate provides you with the skills you need to operate effectively in today’s modern data-centric business environment. A selection of advanced financial analytics courses will help you learn how to access, interpret, analyze, and report business and financial data. Courses completed in the certificate program can be applied later to RIT’s master’s degree in business analytics, or they may be used as a valuable add-on for students pursuing graduate degrees from RIT in fields such as finance, accounting and analytics, applied statistics, and computer science.

What is a Graduate Certificate?

A graduate certificate, also called an advanced certificate, is a selection of up to five graduate-level courses in a particular area of study. Graduate certificates can serve as a stand-alone credential that provides expertise in a specific topic that enhances your professional knowledge base, or they can serve as the entry point to a master’s degree. Some students complete an advanced certificate and apply those credit hours later toward a master’s degree.

Additional Information

Online Degree Information

The online Accounting and Financial Analytics Advanced Certificate can only be completed part-time, taking one or two courses per term. The average time to completion is one year. Delivery is a blend of asynchronous and synchronous study, and academic advisors work with students to select courses that meet degree requirements and student schedules. Students typically spend 10-12 hours per week per class, depending on the content and their background knowledge. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.
Business Administration, MBA

www.rit.edu/study/business-administration-mba
Matthew Cornwell,
585-475-6916, mcornwell@saunders.rit.edu

Program overview

Applications of technology and data analytics are the future of modern business. And, as organizations adapt, there is an increasing demand for business leaders to acquire skills in information systems and data analytics. RIT’s MBA degree is designed to provide you with a strong focus on not only technology, but information systems, data analytics, and an exceptional foundation in the STEM fields.

RIT’s MBA degree

RIT’s MBA degree provides you with the flexibility to design the curriculum around your professional aspirations while also providing you with the STEM education that is increasingly in demand by today’s organizations. You’ll focus your learning on:

- Business Core Courses—Created to provide you with a solid foundation in business, leadership, and management, our core courses focus on organizational operations, financial proficiency, marketing concepts, commercialization, competitive strategy, and more.
- Information Systems—You’ll learn to design and implement leading-edge enterprise technologies in order to collect, store, analyze, and manage vast amounts of data gathered through various customer touchpoints.
- Data Analytics—As businesses and organizations collect more and more data, there is a need to analyze and interpret this information and use it to make intelligent business decisions. RIT’s MBA degree includes courses in data analytics and data management, and business intelligence to help you acquire the skills you need to harness information that generates managerial insights.

A STEM MBA Program

RIT’s MBA degree is a STEM-designated program. This means you’ll graduate with a solid background in the STEM fields that are impacting business today. You’ll complete STEM-designated elective courses, chosen by you, in areas that include advanced data analytics, supply chain analysis, global business analytics, Lean Six Sigma, design thinking and creativity, buyer behavior, managing innovation, integrated business systems, and more.

Experiential Learning

Cooperative Education and Internships

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Co-ops and internships take your knowledge and turn it into knowledge. Business co-ops provide hands-on experience that enables you to apply your knowledge of business, management, finance, accounting, and related fields in professional settings. You’ll make valuable connections between course work and real-world applications as you build a network of professional contacts.

Cooperative education in the MBA program is optional, but encouraged. Academic credit is not granted, but formal recording of the co-op experience is made on the student’s transcript. Students in good academic standing are eligible for co-op after completing the foundation course, and a substantial portion of their concentration courses. They also must attend a series of co-op and career services workshops. RIT does not guarantee co-op placements.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

4+1 Accelerated MBA

Undergraduate students can get a Master of Business Administration (MBA) in one year after completing an undergraduate degree. This accelerated program allows select core MBA courses to be waived with a combination of specific undergraduate “B” grade or better completed coursework. Each undergraduate course may not be older than five years upon matriculation into the MBA degree program, and must be confirmed upon acceptance into the program.

Application Details

To be considered for admission to the Business Administration program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Letters of recommendation are optional.
- Entrance exam requirements: GRE or GMAT required for individuals with degrees from international universities. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 88
- IELTS: 6.5
- PTE Academic: 60

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant's need for additional English language courses.
Business Administration, Ph.D.

www.rit.edu/study/business-administration-phd
Shal Khazanchi, Professor
585-475-7126, skhazanchi@saunders.rit.edu

Program overview

The Ph.D. in business administration is designed to inspire and train scholars to identify, investigate, and solve novel business challenges that influence business and society, particularly, those that are triggered by technological changes. Our program has a sharp emphasis on the effects of technological innovation on discipline-based theories and research. Our faculty adopt an apprenticeship model in working with students to become independent scholars, cutting-edge researchers, and well-trained educators at research-oriented universities.

The program offers three areas of specialization:

Digital Transformation: Digital transformation emphasizes the integration of digital technologies that have altered the marketing of products and services, as well as the management of information systems. In this area of specialization, you will study the design and development of digital artifacts and their implications for interpersonal interaction, analyze the modes of human information processing in digitally transformed business contexts, and theorize the emergence of new business models and ways of organizing in digitally immersive environments.

Strategy and Innovation: A distinct feature of 21st century competition is the pivotal role played by technological innovation as a competitive advantage for organizations. In the strategy and innovation specialization, research emphasizes the growing role of technological capabilities and innovation-based products and processes as a source of competitive advantage. You will acquire knowledge and skills to address novel research questions about firm-level strategy and innovation-related challenges faced by managers and policy makers.

Finance and Accounting: The finance and accounting specialization emphasizes new challenges and research areas that have emerged from technological innovations within finance and accounting disciplines. These areas include FinTech, high-frequency trading, alternative trading systems (dark pool and ECNs), crowdfunding platforms, P2P lending platforms, blockchains, cryptocurrencies, data analytic tools in auditing systems (dark pool and ECNs), crowdfunding platforms, P2P lending platforms, blockchains, cryptocurrencies, data analytic tools in auditing and credit rating, digital transformation of SEC filings and corporate disclosures. In this area of specialization, you will study the antecedents and consequences of technology in finance and accounting.

SCB Graduate Courses 700 level or higher with advisor approval

* Students can take either ACCT-858 or FINC-858, not both
** Students can take either MGIS-812 or MKTG-81, not both

Admission requirements

This program is available on-campus only.

Offered Full-time

Full-time Admit Term(s): Fall
Full-time Application Deadline: January 15 priority deadline, rolling thereafter
Full-time STEM Designated: No

Full-time study is 9+ semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Business Administration program, candidates must fulfill the following requirements:

- Submit two letters of recommendation.
- Entrance exam requirements: GMAT or GRE required. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 94
- IELTS: 7.0
- PTE Academic: 66

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Ph.D. students typically receive full tuition and an RIT Graduate Assistantship that will consist of a research assistantship (stipend) or a teaching assistantship (salary).
RIT’s Executive MBA: An Applied Academic and Strategic-Focused Experience

We know you want more than a simple transfer of business and management theory and concepts. You want a high level of engagement with faculty and especially with your peers. The opportunity to discuss, argue, compete, and collaborate with other seasoned managers on strategic and topical issues and projects is an essential feature of a strong executive MBA program, and of one that has direct and immediate applicability to your professional development. RIT’s executive MBA program is designed to deliver these highly sought-after experiences.

In the executive MBA program, you will master executive skills such as strategic and cross-functional thinking, utilizing data to drive decision making, client consulting, and leadership. You will learn from knowledgeable and professional instructors and from the motivated and diverse peer group enrolled in the program. The executive MBA program encourages analytical thinking and problem solving and places a strong emphasis on collaboration and group interaction.

Executive MBA Courses

The curriculum in RIT’s executive MBA program focuses on core business concepts that provide fundamental skills, knowledge, and perspectives in accounting, statistics, leadership, finance, negotiations, and economics. The program develops skills in cross-functional analysis with an emphasis on strategy, marketing, technology, and international business. Interdisciplinary examples, case analyses, and an applied orientation are key components of the program. The program's courses are evenly distributed across the four semesters, with some modification over the shorter summer semester. Classes are held on alternate Friday and Saturdays from 7:30 a.m. to 4:30 p.m. In addition, all students attend a three-day orientation at the start of the program and a seven-to-10-day international study trip in their last semester. There is one online course each semester. The program takes advantage of local and regional relationships with area businesses, and students have the opportunity to tour various businesses and interact with company leaders during the program, especially during the Executive Leadership course.
International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant's need for additional English language courses.

**Cost and Financial Aid**

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

**Business Administration—Online Executive, MBA**

www.rit.edu/study/business-administration-online-executive-mba

Annie Capella,
585-475-2729, acbbu@rit.edu

**Program overview**

The online executive MBA is a challenging and demanding program designed to accelerate the careers of mature, high-performance professionals with significant business experience, setting itself apart from traditional MBA programs which are geared primarily toward a less experienced audience. The online program covers the same rigorous curriculum as the on-campus EMBA.

This degree program is ideal for creative, innovative individuals who have established careers and are looking for proven and effective strategies to propel them further up the career ladder. You will master executive skills such as strategic and cross-functional thinking and leadership. You will learn from knowledgeable and professional instructors and also from your successful, motivated, diverse peer group. You will leave this program with a solid community of influential peers and a global alumni network to encourage and support your career.

The online EMBA program is an AACSB accredited 17-month 4-semester program with two start dates each year. Students who start in late August will finish in December of the following year; students who start in January will finish in May of the following year.

All students must attend a three-day on-campus orientation session prior to the start of classes and must attend the international seminar, which is an 8-to-10 day business and cultural educational trip near the end of the program. All arrangements are made by RIT, and airfare and lodging are provided by the program.

**Online EMBA Courses**

The curriculum focuses on core business concepts, providing fundamental skills, knowledge, and perspectives in accounting, statistics, leadership, finance, negotiations, and economics. The program develops skills in cross-functional analysis with an emphasis on strategy, marketing, technology, and international business. Interdisciplinary examples, case analyses, and an applied orientation are key components of the program.
International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 0
- IELTS: 0.0
- PTE Academic: 0

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. Business Analytics, MS

www.rit.edu/study/business-analytics-ms

Matthew Cornwell,
585-475-6916, mcornwell@saunders.rit.edu

Program overview

Today’s businesses collect an incredible amount of data from nearly every customer touchpoint, from point-of-sale transactions, customer service interactions, social media feedback, search engine entries, market research activities, sales data, demographic information, and more. Right now, only a tiny portion of this data is analyzed and used to guide and inform business decisions. By earning a business analytics master’s degree, you’ll become skilled in using big data to create powerful solutions to help companies increase sales, reach new customers, develop new products, enhance customer experiences, and more. The program is available on-campus, or you may complete our online business analytics degree.

RIT’s Business Analytics Master’s Degree: On-Campus or Online

This is a career-focused, business analytics master’s degree developed in conjunction with top employers—such as Intuit, Excellus, and PriceWaterhouse—and designed to help you understand and connect contemporary analytics technologies with today’s business practices. You’ll develop the advanced skills needed to conduct the descriptive, diagnostic, predictive, and prescriptive analysis of information as you learn to manage data and analytics in a range of business settings.

Offered both on-campus and online, the program will empower you to turn big data into actionable intelligence. At the intersection of business and data science, business analytics harnesses the power of data analysis to drive and optimize business performance, strategy, and operations.

Business Analytics Courses Packed With High Demand Skills

In RIT’s business analytics master’s degree, you’ll acquire broad and in-depth training in multiple disciplines related to business analytics. You’ll study accounting information and analytics, advanced business analytics, financial analytics, business intelligence, and marketing analytics. In addition, you will select from analytics elective courses in topics such as predictive analytics, information systems design, data management and analytics, categorical data analysis, and more. You will learn:

- Both broad and in-depth training in technical, analytical, and operational areas
- How to use emerging technologies and practices in multiple disciplines including management information systems (MIS), marketing, accounting, finance, management, and engineering
- How to interpret your findings and communicate your insights clearly
- How to apply your skills to influence organizational optimization and outcomes

The curriculum is designed to focus on on-demand skills, including:

- Analytics: Data visualization and tableau skills are growing by 87%; machine learning by 102%.
- Data Science: Demand for deep learning skills will grow 135% , and AI skills are growing by 128%.
- Software, Systems, and Technology: Demand for SAP skills is growing by 78%; Python and R by 61%.
- Industry-Specific Applications: SAS skills are found in half of marketing analytics job postings.
Learn in High-Tech Analytics Labs

You’ll pair your master’s in business analytics with access to two high-tech labs. The Sklarsky Center for Business Analytics, a modern, interactive lab that features Bloomberg Terminals and the most advanced analytics software. The REDCOM Active Learning Collaboratory supports interactive learning and features CISCO Telepresence for connecting interactively with RIT’s global campuses in China, Croatia, Dubai, and Kosovo, and our corporate partners around the world.

Careers in Business Analytics

With RIT’s business analytics master’s degree you’ll graduate prepared to launch your career in business analytics in positions that range from marketing research, analytics, and consulting; digital analytics; web intelligence and analytics; accounting and financial analytics and risk management; supply chain analytics; customer analytics; and consulting.

Experiential Learning

Cooperative Education and Internships

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Co-ops and internships take your knowledge and turn it into know-how. Business co-ops provide hands-on experience that enables you to apply your knowledge of business, management, finance, accounting, and related fields in professional settings. You’ll make valuable connections between course work and real-world applications as you build a network of professional contacts.

Cooperative education is optional but strongly encouraged for graduate students in the business analytics master’s degree.

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Business Analytics program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Letters of recommendation are optional.
- Entrance exam requirements: GMAT or GRE required for individuals with degrees from international universities. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 88
- IELTS: 6.5
- PTE Academic: 60

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.
Additional Information

Bridge Courses
It is expected that prospective students have experience with object-oriented programming and statistics. Students admitted without the necessary background will be assigned bridge courses.

Online Degree Information
The online Business Analytics MS program can only be completed part-time, taking one or two courses per term. The average time to completion is two and a half to three years. Courses in the online program are a blend of synchronous and asynchronous study. This online program does not have any in-person requirements. Academic advisors work with students after admission to select courses that meet degree requirements and student schedules. Program electives are slightly more limited than courses available in the on-campus program. Students typically spend 10-12 hours per week per class, depending on the content and their background knowledge. The program culminates with a capstone project that is completed through the final course (785-Business Analytics Experience). For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

Online Tuition Eligibility
The online Business Analytics MS is a designated online degree program that is billed at a 43% discount from our on-campus rate. View the current online tuition rate.

Finance, MS
www.rit.edu/study/finance-ms
Matthew Cornwell,
585-475-6916, mcornwell@saunders.rit.edu

Program overview
Encompassing corporate finance, investment management, banking, insurance, consulting, and more, RIT’s master of science in finance unlocks the world of finance and prepares you for managerial careers in corporate finance, investment analysis, and portfolio management, financial consulting, and financial institutions.

RIT’s Master of Science in Finance
Top finance master’s programs, like RIT’s master of science in finance, prepare you to take the Chartered Financial Analyst® (CFA) exam—the most respected and recognized investment management designation in the world. In this highly flexible program, you’ll complete courses in accounting for decision makers, financial analysis for managers, securities and investment analysis, options and futures, and more. In addition, you’ll choose elective courses in a wide range of dynamic areas—portfolio management, financial analytics, equity analysis, stock market algorithmic trading, financial modeling and analysis, and more—that prepare you for today’s dynamic careers in finance. Enhance your marketability and expand your job prospects.

Finance Careers
Graduates of RIT’s master of science in finance are prepared for outstanding career opportunities in a range of finance positions, including financial engineer, risk analyst, research associate, quantitative analyst, quantitative investment analyst, credit risk analyst, quantitative strategist, data analyst, and more.

Our alumni are employed at diverse financial firms such as AMG Technology, Invata Intralogistics, T3 Trading Group, LLC, TD Securities, MAI Capital Management, and more.

Global Supply Chain Management, MS
www.rit.edu/study/global-supply-chain-management-ms
Matthew Cornwell,
585-475-6916, mcornwell@saunders.rit.edu

Program overview
Products and services increasingly rely on a globally integrated supply system and the related technologies that enable the efficient movement of these goods and services around the world. In demand are supply chain management professionals who can manage the complex operations that take a product from ideation, sourcing of materials, production, storage and transportation, to purchasing, order fulfillment, distribution, and inventory management. The global supply chain needs to be efficient for companies to remain competitive internationally as they turn raw materials into consumer goods and services and deliver them to consumers. In RIT’s supply chain management masters, you will gain a comprehensive understanding of the global supply chain as you gain the analytical, quantitative, and leadership skills needed to design innovative solutions, predict future trends, and become a leader in the fast-moving business landscapes found in the global supply chain system.

Rooted in the strong technology and analytical traditions of RIT’s Saunders College of Business, the global supply chain management degree is an interdisciplinary program that integrates concepts from supply chain, operation management, analytics, data visualization, industrial engineering, global business, and management.

Jobs in Supply Chain Management
RIT’s global supply chain management degree prepares you for exciting jobs in supply chain management, which includes careers in planning and logistics, procurement, and sourcing through comprehensive course work and real-world business projects. You’ll graduate ready to pursue top positions as a transportation manager, financial analyst, logistics analyst, sourcing manager, purchasing manager, business intelligence analyst, or facilities manager.

Hospitality Business Management, MS

www.rit.edu/study/hospitality-business-management-ms
Matthew Cornwell, 585-475-6916, mcornwell@saunders.rit.edu

Program overview

The master’s in hospitality business management is exclusively online. It prepares you to manage current and emerging industry issues. It offers an applied curriculum that develop your skills in cutting-edge analytics and technology skills, positioning you to pursue leadership positions. It also enables you to develop a secondary focus in a range of areas, including finance, digital marketing, entrepreneurship, human resources, supply chain management, or data management.

These are the in-demand skills you need to succeed in today’s rapidly changing hospitality and tourism industry. With a master’s in hospitality and tourism management, you’ll be prepared for multiple mid-level service management and training director positions as you create and present new hospitality and tourism services through effective interpersonal, oral, and written communication. Graduates are ready to step into multiple service management and training director positions.

RIT’s Hospitality Management Degree: Exclusively Online

The master’s in hospitality business management is focused on hospitality business planning, branding, asset management, customer experience, and data analytics within a hospitality business. You will become an exceptional leader in the service industry, a corporate setting, or in post-secondary academic environments.

The curriculum is flexible and enable you to pursue additional areas of business in which you may have an interest, including finance, accounting, marketing, human resources, supply chain, MIS, or others. The program is offered entirely online and may be completed on a full- or part-time basis. The length of time required to earn a degree varies according to your undergraduate preparation and the number of graduate courses taken per semester.

Total Semester Credit Hours 30

* Graduate Level Business Course will be approved by the program director.

Admission requirements

This program is available on-campus or online. The following admissions details apply to the on-campus program.

Offered Part-time

Part-time Admit Term(s): Fall
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Hospitality Business Management program, candidates must fulfill the following requirements:

• Complete an online graduate application.
• Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
• Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
• A recommended minimum cumulative GPA of 3.0 (or equivalent).
• Submit a current resume or curriculum vitae.
• Submit a personal statement of educational objectives.
• Letters of recommendation are optional.
• Entrance exam requirements: GRE or GMAT required for individuals with degrees from international universities. No minimum score requirement.
• Writing samples are optional.
• Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

TOEFL: 88
IELTS: 6.5
PTE Academic: 60

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.
Additional Information

Online Degree Information
The Hospitality Business Management MS program can only be completed part-time, taking one or two courses per term. The average time to completion is two and a half to three years. Courses in the online program are a blend of synchronous and asynchronous study. The 6 core courses will be asynchronous. The 4 elective courses could be synchronous or asynchronous, depending on the student's choice. This online program does not have any in-person requirements. Academic advisors work with students to select courses that meet degree requirements and student schedules. Students typically spend 10-12 hours per week per class, depending on the content and their background knowledge. The program culminates with a capstone project in hospitality and tourism. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

Online Tuition Eligibility
The online Hospitality Business Management MS is a designated online degree program that is billed at a 4.5% discount from our on-campus rate. View the current online tuition rate.

Organizational Leadership and Innovation, MS
www.rit.edu/study/organizational-leadership-and-innovation-ms
Karen Palmer,
585-475-5656, kbpges@rit.edu

Program overview
Interested in influencing people, implementing innovation in dynamic ways, and impacting your organization at the highest levels? Then organizational leadership is paramount to your ability to lead in today's tech-infused business environment.

What is Organizational Leadership?
Leading in innovative environments demands leaders who have a future-focused mindset and the advanced skills to lead in organizations that are constantly adopting and evolving from the latest in tech innovations. Organizational leadership is creating an intentional, collaborative work environment where you are able to identify and influence an organization's ability to innovate and evolve. Leaders of innovation are initiators, doers, range-agents, and change-makers.

RIT’s Organizational Leadership Degree
Constant technology advances provide organizations with a growing set of tools and opportunities to manage. They need leaders to spearhead organizational change, particularly in these technology-driven and innovative contexts. In the MS degree in organizational leadership and innovation, you will be equipped with the tools to spearhead organizational change, particularly in technology-driven and innovative contexts. The curriculum adds future-focused and innovative leadership-oriented courses that leverage faculty expertise in organizational leadership, innovation, technology, and strategy development. You'll learn to create an entrepreneurial culture and build sustainable teams while you develop skills in the leadership and management of innovation.

Organizational Leadership Courses
The curriculum includes courses in topics such as strategic foresight and innovation, technology and the future of work, leading change, and leading teams in organizations. You will learn how to foresee emerging technologies and innovations, and convert these opportunities into strategies. The program's courses are designed to develop your skills and abilities to use leadership to create innovative work cultures and lead innovative individuals and teams. By combining leadership skill development and managing innovation, you will be prepared to build sustainable organizations that can adapt efficiently.

Careers in Organizational Leadership
Careers in the field are growing. The job market shows a consistent increase in demand for students who know how to lead in innovation contexts. In 2021, top job sites in the U.S. carried more than 100,000 job postings for leadership roles in innovation contexts in the U.S. These jobs include leadership positions as chief innovation strategist, director of strategy and innovation, director of talent innovation, and more.

Additional Information
Online Degree Information
The courses in the online Organizational Leadership and Innovation MS are a combination of asynchronous and synchronous. Delivery format will vary based on the preference of the faculty leading the course. Synchronous courses meet one day a week for a 2 1/2 hour session in the evening (ET). Academic advisors work with students on a study plan after admission to ensure classes fit student availability. Typically students finish this degree in 24-36 months. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

www.rit.edu/study/technology-entrepreneurship-adv-cert
Matthew Cornwell,
585-475-6916, mcornwell@saunders.rit.edu

Program overview
Today’s entrepreneur faces a highly competitive and constantly changing marketplace driven by continuous innovation in technology, business models, execution, and strategy. In order to succeed, the new entrepreneur must develop an understanding of these dynamics and how this interplay creates value for a new venture.

RIT: Where Technology and Entrepreneurship Intersect
The advanced certificate in technology entrepreneurship features three required courses plus one elective. In its entirety, the curriculum provides the skills and knowledge an entrepreneur needs to successfully navigate the process of starting a new venture and managing technological innovation.

What is a Graduate Certificate?
A graduate certificate, also called an advanced certificate, is a selection of up to five graduate-level courses in a particular area of study. It can serve as a stand-alone credential that provides expertise in a specific topic that enhances your professional knowledge base, or it can serve as the entry point to a master’s degree. Some students complete an advanced certificate and apply those credit hours later toward a master’s degree.

Technology Innovation Management and Entrepreneurship, MS
www.rit.edu/study/technology-innovation-management-and-entrepreneurship-ms
Matthew Cornwell, 585-475-6916, mcornwell@saunders.rit.edu

Program overview
Technology innovation is a key business driver in all industries as new products and services rapidly improve our lives in significant ways. Technology innovation managers and entrepreneurs who know how to lead technological change in entrepreneurial ways are in high demand to capitalize on process and product development opportunities. As an entrepreneur and innovator, you will be part of today's innovation management as you identify problems and view them through the lens of technology innovation in an effort to develop unique and creative solutions.

The MS in technology innovation management and entrepreneurship will help you gain the skills you need to create value for your startups or entrepreneurial corporations. Through real-life business exposure and leveraging sources via RIT's integrated global network, you'll emerge as a business leader who can lead with technological entrepreneurship.

The program offers two tracks. In the technology management track, you will develop advanced product development and data analytics skills targeting organizational management and strategy needs. The technology entrepreneurship track develops skills in starting and managing new ventures that utilize research and marketing analytics to evaluate market options and build strategy. Each track consists of core courses and electives in data management and analytics and managerial skills.

Study Technology Innovation at RIT
World-renowned resources in business, science, technology, engineering, and design allow innovation and entrepreneurship to thrive at RIT. Your advantage is a rich entrepreneurial culture, with access to facilities such as the Simone Center for Innovation and Entrepreneurship, The Construct (a world-class maker space), and Venture Creations, RIT's business incubator. Teachers, industry mentors, an applied approach, and access to science, technology, engineering, and design resources prepare you to focus on entrepreneurial and innovation processes by which inventions and creative new ideas are brought to market.

Saunders College professors bring industry experience and include entrepreneurs, C-level executives, vice presidents, and leading scholars in disciplines like technology management. You will benefit from small class sizes and dedicated faculty advisors that provide one-on-one guidance. As a graduate of the program, you will have a unique combination of technical and business expertise relevant to large incumbent firms and new startup ventures.

Experiential Learning

Cooperative Education and Internships
What makes an RIT education exceptional? It's the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.
Co-ops and internships take your knowledge and turn it into know-how. Business co-ops provide hands-on experience that enables you to apply your knowledge of business, management, finance, accounting, and related fields in professional settings. You’ll make valuable connections between course work and real-world applications as you build a network of professional contacts.

Cooperative education is optional but strongly encouraged for graduate students in the MS in technology innovation management and entrepreneurship.

Established: 2008
Donor: Maurice Foreman in honor of his father, Benjamin Forman
Purpose: To support a professorship of a nationally prominent scholar in Research
Held by: Zhi Tang, Ph.D.; Rong Yang, Ph.D.

Daniel D. Tessoni Professorship in Accounting
Established: 2015
Donor: Friends and Alumni of Dan Tessoni and Saunders College of Business
Purpose: To honor Daniel D. Tessoni for his teaching contributions and his lifelong impact on students
Held by: Daniel Tessoni, Ph.D.
The Golisano College of Computing and Information Sciences is one of the most comprehensive computing colleges in the United States. Please visit the college’s website—www.rit.edu/computing—for in depth information on academics, faculty, facilities, research initiatives, advising, and more.

**Admission requirements**
Each college makes all decisions regarding graduate admission. Please refer to the individual program descriptions for information regarding specific admission criteria. For general graduate admission information, please refer to the Admission section of this bulletin.

**Financial aid and scholarships**
Please refer to the Financial Aid and Scholarship section of this bulletin for information regarding financial aid, scholarships, grants, loans, and graduate assistantships.

www.rit.edu/study/artificial-intelligence-computer-science-adv-cert
Hans-Peter Bischof, Professor
585-475-5568, hxbics@rit.edu

Program overview

The advanced certificate in artificial intelligence for computer science is intended for those who want to advance their understanding of artificial intelligence. You will learn how to apply deep learning, natural language processing, and knowledge representation to solve problems that have been considered unsolvable until recently. This artificial intelligence certificate will enable you to develop the skills needed to work in the many industries currently dealing with problems in the field of artificial intelligence.

What is a Graduate Certificate?

A graduate certificate, also called an advanced certificate, is a selection of up to five graduate-level courses in a particular area of study. It can serve as a stand-alone credential that provides expertise in a specific topic that enhances your professional knowledge base, or it can serve as the entry point to a master's degree. Some students complete an advanced certificate and apply those credit hours later toward a master's degree.

Curriculum

Admission requirements

This program is available on-campus only.

Entrance exam requirements: GRE required for individuals with degrees from international universities. No minimum score requirement.

Writing samples are optional.

Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

<table>
<thead>
<tr>
<th>Test</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOEFL</td>
<td>88</td>
</tr>
<tr>
<td>IELTS</td>
<td>6.5</td>
</tr>
<tr>
<td>PTE Academic</td>
<td>60</td>
</tr>
</tbody>
</table>

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Prerequisites

Applicant must have college-level experience in probability and statistics and college-level knowledge of computer programming.

Part-time study is 1-8 semester credit hours. RIT will not issue a student visa for advanced certificates.

Application Details

To be considered for admission to the Artificial Intelligence in Computer Science program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college in science, computing, or engineering.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
Artificial Intelligence, MS

www.rit.edu/study/artificial-intelligence-ms
Cecilia Alm, Professor
585-475-7327, Cecilia.O.Alm@rit.edu

Program overview

There is an enormous and growing demand for AI professionals across all sectors of society. This artificial intelligence master's degree is designed for students with an interest in various AI sectors from various educational backgrounds.

You will develop well-rounded skill-sets in designing, developing, and deploying AI systems, and also in understanding and analyzing AI’s impact on policy and society. A rich set of core courses prepare you with essential technical skills and knowledge.

Master's in Artificial Intelligence

RIT’s artificial intelligence master’s offers you a tailored experience through your choice of electives. For example, you can study a central AI topic or an impactful domain of AI applications. You will gain career-enhancing experience through hands-on projects and course work. Prior to graduation, a capstone or an optional thesis allows you apply learned skills to evaluate or investigate an active area in artificial intelligence.

AI Course Work

- Core courses: You will develop a range of essential AI skills and knowledge through core courses. If necessary, there are computer programming and a mathematical bridge courses available.
- Elective courses: Make this degree your own by customizing electives to fit your goals. Develop depth in an area of special interest with electives that focus on central AI themes such as machine learning, natural language and speech processing, computer vision, robotics, sociotechnical AI analysis, and more.
- Capstone or thesis: Choose to complete a capstone course and an extra elective course, or spend the equivalent of two courses on a thesis project with an individual expert advisor.

Interdisciplinary Curriculum

The master’s in AI is jointly delivered by faculty experts from four RIT colleges—Golisano College of Computing and Information Sciences, College of Liberal Arts, College of Science, and Kate Gleason College of Engineering—allowing you to grow valuable, career-enhancing interdisciplinary skills and communication competency as part of your program experience.

Careers in Artificial Intelligence

Graduates of the master’s in artificial intelligence are equipped with the tools and knowledge for successful careers in industry or other organizations. They will also be prepared for doctoral degree programs in a range of areas, as the impact of AI expands into established and emerging career professions.

Experiential Learning

Cooperative Education

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Cooperative education is optional but strongly encouraged for graduate students in the artificial intelligence master’s degree.

Creative Industry Day

RIT’s Office of Career Services and Cooperative Education hosts Creative Industry Day, which connects students majoring in art, design, film and animation, photography, and select computing majors with companies, organizations, creative agencies, design firms, and more. You’ll be able to network with company representatives and interview directly for open co-op and permanent employment positions.

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Prerequisites
Applicant must have college-level credit in Python programming and mathematics.

www.rit.edu/study/big-data-analytics-adv-cert

Hans-Peter Bischof, Professor
585-475-5568, hxbics@rit.edu

Program overview

The mass amount of data collected by industries, retailers, and organizations requires knowledgeable professionals who can collect, mine, and analyze as well as store, retrieve, and manage data. These professionals also guide the analysis, preparation, and visualization of data to aid in understanding trends, patterns, and behaviors, all of which help impact business decisions.

Big data is noted for its volume, varieties of data types, and rapid accumulation. Big data has become a catchphrase to describe data collections that are so large they are not amenable to processing or analysis using traditional database and software techniques. The advanced certificate in big data analytics is a multidisciplinary program intended for professionals with BS degrees in computing or other diverse fields—such as finance, retail, science, engineering, or manufacturing—where knowledge in data analysis is in demand.

Big Data Analytics Courses

The big data certificate features courses in the practical techniques used in exploratory data analysis and mining, as well as the approaches used to store, retrieve, and manage data in the real world. The certificate is meant for students who would like a formal qualification in big data analytics. It also allows professionals with a bachelor’s degree to enhance their career opportunities and professional knowledge with targeted graduate course work in big data.

What is a Graduate Certificate?

A graduate certificate, also called an advanced certificate, is a selection of up to five graduate level courses in a particular area of study. It can serve as a stand-alone credential that provides expertise in a specific topic that enhances your professional knowledge base, or it can serve as the entry point to a master’s degree. Some students complete an advanced certificate and apply those credit hours later toward a master’s degree.

Prerequisites

Have college-level credit or practical experience in probability and statistics, computer programming in a high-level language, and database systems.
Computer Science, MS

www.rit.edu/study/computer-science-ms
Hans-Peter Bischof, Professor
585-475-5568, hxbics@rit.edu

Program overview

RIT’s computer science master’s degree is designed for students who have an undergraduate degree (or minor) in computer science, as well as those who have a strong background in a field in which computers are applied, such as engineering, science, or business. The degree is offered on a full- or part-time basis and can be completed either on-campus or online.

Computer Science Master’s Degree–On-Campus or Online

In the computer science master’s degree, you’ll apply theoretical principles underlying computer science, ensuring you acquire the intellectual tools necessary to keep up-to-date in this rapidly evolving discipline. With focused coursework in areas such as computer graphics and visualization, data management, distributed systems, intelligent systems, programming languages and tools, and security, you’ll be prepared for career advancement in a range of areas.

The on-campus and online versions of the program—from curriculum, faculty, and cluster options—are identical. You will have access to RIT’s resources, including computing labs and libraries. Skilled advisors in the Office of Career Services and Cooperative Education provide advice and guidance to help you plan, prepare, and meet your career goals and aspirations. Application requirements, the admission review process, and tuition are the same for both programs. All applications are considered for scholarships, regardless of online or on-campus study.

Computer Science Master’s Curriculum

Regardless of how you complete the computer science master’s degree (on-campus or online), the program consists of one core course, three cluster courses, four electives, and a thesis or project. The program prepares for academic and research careers in computer science or related disciplines. It is designed for students who have an undergraduate major or minor in computer science as well as those who have a strong background in a field in which computers are applied.

Full-time students take three or four courses per semester and may be able to complete the course work in three semesters. Full-time students who are required to take additional bridge courses may be able to complete the course work in four semesters.

Part-time students take one or two courses per semester and may be able to complete the course work in four to five semesters. The time required to complete a master’s project is one semester. To complete the master’s thesis, two semesters is typical.

Clusters: You will select three cluster courses from the following areas:
- The computer graphics and visualization cluster provides the technical foundations for graduate studies in computer graphics and image understanding. Areas for further study include graphics programming, rendering and image synthesis, computer animation and virtual reality, image processing, and analysis, and data visualization.
- The data science cluster studies the foundational data management and knowledge discovery challenges prevalent in the design, analysis, and organization of data. The courses cover general database issues including database design, database theory, data management, and data mining.
- The distributed systems cluster studies systems formed from multiple cooperating computers, including the analysis, design, and implementation of distributed systems, distributed middleware, and computer networking protocols, including security.
- The artificial intelligence cluster encompasses the study of algorithms and architectures that enable effective decision-making in complex environments. Courses cover computer vision, robotics, virtual theater, sensor networks, data mining, document recognition, and the theoretical foundations of decision-making (e.g., Markov chains and the properties of voting protocols).
- The languages and tools cluster combines language design and implementation together with architecture and the use of software development tools. Students specializing in this cluster gain a broad understanding of theoretical and applied knowledge.
- The security cluster spans topics from networking to cryptography to secure databases. By choosing different domains in which to study security, students gain a broad understanding of both theoretical and applied knowledge.
- The theory cluster studies the fundamentals of computation, which includes complexity theory to determine the inherent limits of computation, communication, and cryptography and the design and analysis of algorithms to obtain optimal solutions within those limits.

Electives: Electives provide a breadth of experience in computer science and applications areas. Students who wish to include courses from departments outside of computer science need prior approval from the graduate program director. Refer to the course descriptions in the departments of computer science, engineering, mathematical sciences, and imaging science for possible elective courses.

Master’s Thesis/Project: Students may choose the thesis or project option as the capstone to the program. Students who choose the project option must register for courses titled Computer Science MS Project. Students participate in required in-class presentations that are critiqued. A summary project report and public presentation of the student’s project in poster form occur at the end of the semester.

Experiential Learning

Cooperative Education

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Cooperative education is optional but strongly encouraged for graduate students in the computer science MS degree.

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

### Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

### Additional Information

**Prerequisites**

Applicants must satisfy prerequisite requirements in mathematics (differential and integral calculus, probability and statistics, discrete mathematics, and computer science theory) and computing (experience with a modern high-level language [e.g., C++, Java], data structures, software design methodology, introductory computer architecture, operating systems, and programming language concepts).

**Bridge Courses**

If an applicant lacks any prerequisites, bridge courses may be recommended to provide students with the required knowledge and skills needed for the program. If any bridge courses are indicated in a student’s plan of study, the student may be admitted to the program on the condition that they successfully complete the recommended bridge courses with a grade of B (3.0) or better (courses with lower grades must be repeated). Generally, formal acceptance into the program is deferred until the applicant has made significant progress in this additional coursework. Bridge program courses are not counted as part of the 30 credit hours required for the master’s degree. During orientation, bridge exams are conducted. These exams are equivalent to the finals of the bridge courses. Bridge courses will be waived if the exams are passed. Bridge courses commonly assigned in the first semester are CSCI 603/605/661.

### Online Degree Information

**Online Tuition Eligibility**

The online Computer Science MS is considered a professional degree that is billed at the standard (on campus) RIT graduate tuition rate. It is not billed at the designated online tuition rate. Scholarship is available off the standard tuition rate for this online program. View the current Graduate tuition rate.
Computing and Information Sciences, Ph.D.

www.rit.edu/study/computing-and-information-sciences-phd

Pengcheng Shi, Professor
585-475-6147, spcast@rit.edu

Program overview

In the computing and information sciences Ph.D., you will conduct both foundational and applied research to address diverse and important challenges within and beyond computing and benefit from world-class faculty, diverse academic offerings, and modern facilities. Our graduates are poised to excel in both computing and interdisciplinary environments in academia, government, and industry.

The doctoral program highlights two of the most unique characteristics of the Golisano College for Computing and Information Sciences: its breadth of program offerings and its scholarly focus on discovering solutions to real-world problems by balancing theory and practice. The program brings together faculty from disciplines throughout the college’s five departments and schools: Computer Science, Computing Security, the School of Information, the School of Interactive Games and Media, and Software Engineering.

The Ph.D. in computing and information sciences focuses on the theoretical and practical aspects of cyberinfrastructure as applied to specific problems across multiple domains. It is a blend of intra-disciplinary computing knowledge areas and inter-disciplinary domain areas.

Cyberinfrastructure

Cyberinfrastructure is the comprehensive integration of hardware, data, networks, and digitally-enabled sensors to provide secure, efficient, reliable, accessible, usable, and interoperable suites of software and middleware services and tools. The doctorate program plays a leadership role in cyberinfrastructure research by providing human-centered tools for the science and engineering communities. These tools and services focus on such areas as high-performance computing, data analysis and visualization, cyber-services and virtual environments, and learning and knowledge management.

Intradisciplinary Knowledge

There are three intradisciplinary computing knowledge areas: infrastructure, interaction, and informatics.

Infrastructure

Infrastructure comprises aspects related to hardware, software (both system software and applications), communications technology, and their integration with computing systems through applications. The focus is on the best organization of these elements to provide optimal architectural solutions. On the hardware side, it includes system-level design (e.g., for system-on-a-chip solutions) and their building block components. On the software side it covers all aspects of systems and applications software development, including specification and design languages and standards; validation and prototyping, and multi-dimensional Quality-of-Service management; software product lines, model-driven architectures, component-based development, and domain-specific languages; and product estimation, tracking, and oversight. The communications subtopic includes sensor networks and protocols; active, wireless, mobile, configurable, and high-speed networks; and network security and privacy, quality of service, reliability, service discovery, and integration and inter-networking across heterogeneous networks. At the system level, there are issues related to conformance and certification; system dependability, fault tolerance, verifiable adaptability, and reconfigurable systems; real-time, self-adaptive, self-organizing, autonomic systems. Some of the specialties available in this area are networks and security, digital systems and VLSI, software design and productivity, and systems software.

Interaction

Interaction refers to topics related to the combined action of two or more entities (human or computational) that affect one another and work together when facilitated by technology. It encompasses several subtopics relating to how people and technology interact and interface. Several common threads weave through all of these areas, many of which rely heavily and build upon foundations in the social and behavioral sciences with an emphasis on understanding human and social/organizational phenomena. To some extent, these fields follow an engineering approach to the design of interactions in which solutions are based on rules and principles derived from research and practice but require analyses that go beyond the analytical approach. From this perspective, solutions can be measured and evaluated against goals and intended outcomes. However, while efficiency and effectiveness are often the watchwords of these fields in practice, this is also where science meets art in computing. Creative design and sensitivity to human needs and aesthetics are critical. Some of the specialties available in this area are human-computer interaction, computer-based instructional systems, and access technologies.

Informatics

Informatics is the study of computational/algorithmic techniques applied to the management and understanding of data-intensive systems. It focuses on the capture, storage, processing, analysis, and interpretation of data. Topics include algorithms, complexity, and discovery informatics. Data storage and processing require investigation into tools and techniques for modeling, storage, and retrieval. Analysis and understanding require the development of tools and techniques for the symbolic modeling, simulation, and visualization of data. The increased complexity of managing vast amounts of data requires a better understanding of the fundamentals of computation. These fundamentals include complexity, theory to determine the inherent limits of computation, communication, cryptography, and the design and analysis of algorithms to obtain optimal solutions within the limits identified. Some of the specialties available in this area are core informatics, discovery informatics, and intelligent systems.

Interdisciplinary Domains

The program focuses on domain-specific computing, or the interaction between computing and non-computing disciplines, in the areas of science, engineering, medicine, arts, humanities, and business. By incorporating domain-specific computing, the research conducted in this program applies computing and information science principles to the solution of problems in application domains that lie outside the scope of the traditional computing discipline. The research requirement incorpo-rates fundamental concepts in cyberinfrastructure that are necessary for understanding the problems commonly encountered in advancing scientific discovery and product development in cross-disciplinary domains.

Active Research Areas

Computing
- Algorithm and theory
- Artificial intelligence and machine learning
- Communication and networking
- Computer vision and pattern recognition
- Data management and analytics
- Education research
- Game design
Golisano College of Computing and Information Sciences

- Graphics and visualization
- Human–computer interaction
- Natural language processing
- Pervasive and Mobile Computing
- Programming languages
- Security and privacy
- Software engineering

**Domain applications**
- Accessibility and inclusion
- Biomedical computing
- Cognitive sciences
- Computational astrophysics
- Computational finance
- Geographic information system
- Imaging and image informatics
- Service sciences
- Social computing

**RIT’s Ph.D. in Information Science**

The Ph.D. in information science requires a minimum of 60 credit hours beyond the baccalaureate level comprised of graduate-level course work, including seminar attendance and research credits. Students complete required foundation and core elective courses and teaching skills courses. Elective courses provide foundation support for the student’s dissertation research area. These courses come from cyberinfrastructure courses, domain courses, and other electives.

**Dissertation and Research**

Students are required to conduct original research that leads to peer-reviewed publications.

**Assessments**

Each student must pass three assessment examinations in the following order:

1. Research potential assessment: qualifying exam
   Completed after the first year, this assessment evaluates the research tasks students have worked on in their first year in the program. Passing this assessment will qualify students to continue in the doctoral program.
2. Thesis proposal defense: candidacy exam
   This is an oral examination completed after the thesis proposal is written. Formal admission to candidacy will be granted after successfully passing the research potential assessment requirement and having a research proposal approved by the dissertation committee. The dissertation committee will have a minimum of four members including the student's adviser.
3. Dissertation defense
   This is the final examination. The dissertation defense includes the dissertation committee and an optional external reader from outside RIT. The exam consists of a formal, oral presentation of the thesis research by the student, followed by questions from the audience.

**Curriculum**

**Computing and Information Sciences, Ph.D. degree, typical course sequence**

**Total Semester Credit Hours**

60

**Admission requirements**

This program is available on-campus only.

**Offered Full-time**

- Full-time Admit Term(s): Fall
- Full-time Application Deadline: December 31 priority deadline, rolling thereafter
- Full-time STEM Designated: Yes

- Full-time study is 9+ semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

**Application Details**

To be considered for admission to the Computing and Information Sciences program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college. Since the program encompasses a wide variety of disciplines, students with diverse backgrounds (e.g. engineering, science, humanities, fine arts, business, and disciplines with sufficient computing backgrounds) are encouraged to apply.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a statement of purpose for research which will allow the Admissions Committee to learn the most about you as a prospective researcher.
- Submit two letters of recommendation.
- Entrance exam requirements: GRE required. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

**English Language Test Scores**

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 88
- IELTS: 6.5
- PTE Academic: 60

62 Graduate Bulletin
International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant's need for additional English language courses.

**Cost and Financial Aid**

An RIT graduate degree is an investment with lifelong returns. Ph.D. students typically receive full tuition and an RIT Graduate Assistantship that will consist of a research assistantship (stipend) or a teaching assistantship (salary).

**Additional Information**

**Prerequisites**
- Have completed at least one full year of study in programming and computing concepts
- Have a strong mathematical background in subjects such as discrete mathematics and probability and statistics
- Have aptitude, vision, and experience (if applicable) in computing and information sciences-related research

**Cybersecurity, Adv. Cert.**

www.rit.edu/study/cybersecurity-adv-cert

Sumita Mishra, Professor
585-475-4475, sumita.mishra@rit.edu

**Program overview**

Gain the fundamental knowledge and expertise in network security and forensics that is necessary for security in networked environments. In the advanced certificate in cybersecurity, you'll learn to make computers and networks resistant to attack by monitoring intrusions and closing off vulnerabilities.

The application of forensics allows successful attacks on computer systems to be detected. This involves gathering information on the nature and extent of the attack for presentation in a court of law, as well as assessing the extent of the damage to an organization. Courses taken as part of this certificate can transfer into the MS program in computing security.

**What is a Graduate Certificate?**

A graduate certificate, also called an advanced certificate, is a selection of up to five graduate level courses in a particular area of study. It can serve as a stand-alone credential that provides expertise in a specific topic that enhances your professional knowledge base, or it can serve as the entry point to a master's degree. Some students complete an advanced certificate and apply those credit hours later toward a master's degree.

**Curriculum**

**Cybersecurity, advanced certificate, typical course sequence**

**Admission requirements**

This program is available on-campus only.

- **Offered Part-time**
- **Part-time Admit Term(s):** Fall
- **Part-time Application Deadline:** Rolling
- **Part-time STEM Designated:** No

Part-time study is 1-8 semester credit hours. RIT will not issue a student visa for advanced certificates.

**Application Details**

To be considered for admission to the Cybersecurity program, candidates must fulfill the following requirements:
- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college in computing security, computer science, software engineering, information technology, networking, computer engi-
neering, electrical engineering, applied mathematics, or computer engineering technology (exceptional students from other fields may be admitted on a contingent basis).

- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit 1 letter of recommendation.
- Entrance exam requirements: GRE required for individuals with degrees from international universities. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 88
- IELTS: 6.5
- PTE Academic: 61

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Prerequisites

Applicants must satisfy prerequisite requirements in computing (computer networking theory and practice, and systems administration theory and practice).

Bridge Courses

Based on the evaluation of an applicant’s academic and relevant experience, the graduate program director may require some applicants to complete a bridge course to fulfill any gaps in the required prerequisites needed for admission to the program. The bridge course, Introduction to Computing Security (CSEC-600), is not part of the 12 credit hours required for the advanced certificate.

Cybersecurity, MS

www.rit.edu/study/cybersecurity-ms

Sumita Mishra, Professor
585-475-4475, sumita.mishra@rit.edu

Program overview

There is critical importance to building security and survivability into the hardware and software of computing systems as they are designed and developed, rather than trying to add it on once these systems have been designed, developed, and installed. Our master’s in cybersecurity gives you an understanding of the technological and ethical roles of computing security in today’s society and its importance across the breadth of computing disciplines.

RIT’s Cybersecurity Master’s Degree

RIT’s master’s in cybersecurity enables you to develop a strong theoretical and practical foundation in security computing, preparing you for leadership positions in the cybersecurity industry, academia, or research careers, or to pursue a more advanced degree in cybersecurity or another computing discipline.

The cybersecurity master’s degree is designed for students who have an undergraduate computing degree in an area such as computing security, computer science, information technology, networking, or software engineering, as well as those who have a strong background in a field in which computers are applied, such as computer or electrical engineering.

Cybersecurity MS Courses

The cybersecurity master’s degree consists of core courses, technical electives, and a thesis, project, or capstone experience.

You can develop a specialization in one of several cybersecurity-related areas by selecting technical electives under the guidance of a faculty advisor.

ESL Global Cybersecurity Institute: Advancing Cybersecurity Education

The ESL Global Cybersecurity Institute is a state-of-the-art, 52,000-square-foot facility designed for advanced cybersecurity education, training, and research. You will learn from experts who have developed a world-class curriculum that covers cybersecurity to managing information systems as you build secure systems and new technologies.

You’ll also have access to the Cyber Range, which generates the real world feel of responding to a cybersecurity crisis for governments and industries to test their security and identify innovative/effective solutions.

Experiential Learning

Cooperative Education

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Cooperative education is optional but strongly encouraged for graduate students in the computing security MS degree.

- Submit 1 letter of recommendation.
- Entrance exam requirements: GRE required for individuals with degrees from international universities. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

Additional Information

Prerequisites

Applicants must satisfy prerequisite requirements in discrete mathematics, statistics, and computing (programming, computer networking theory and practice, and systems administration theory and practice).

Bridge Courses

Students whose undergraduate preparation or employment experience does not satisfy the prerequisites required for the program may make up for deficiencies through additional study. Bridge course work, designed to close gaps in a student’s preparation, can be completed either before or after enrolling in the program as advised by the graduate program director. Generally, formal acceptance into the program is deferred until the applicant has made significant progress through this additional preparation.

If completed through academic study, bridge courses must be completed with a grade of B (3.0) or better. Courses with lower grades must be repeated. Bridge courses are not counted toward the 30 credit hours required for the master’s degree. However, grades earned from bridge courses taken at RIT are included in a student’s graduate grade point average.

A bridge program can be designed in different ways. Courses may be substituted based on availability, and courses at other colleges may be applied. All bridge course work must be approved in advance by the graduate program director. For more information on the bridge program, please consult the Computer Security MS Handbook.
Data Science, MS

www.rit.edu/study/data-science-ms
Travis Desell, Associate Professor
585-475-2991, tjdves@rit.edu

Program overview

Data science is one of the hottest fields in computing. The data science degree gives you the practical and theoretical skills to handle large-scale data management and analysis challenges that arise in today's data-driven organizations. This program appeals to professionals looking to enhance their skill set, and includes opportunities for customized course work within the broad field of data science and its various application areas.

RIT's Data Science Master's: On-Campus or Online

In response to the growing need to generate and analyze meaningful data across all industries, demand is on the rise for a new breed of professionals skilled in both analytics and computing. RIT's MS in data science encourages you to work with faculty experts in the fields of data science, analytics, and infrastructure who provide hands-on experience solving real problems. The curriculum includes opportunities for you to choose elective courses to pursue a variety of career paths within the broad field of data science and its various application areas. The program prepares you—regardless of your scientific, engineering, or business background—to pursue a career in data science.

RIT’s colleges of Science and Computing and Information Sciences collaborated to deliver the data science master's, which combines the expertise and knowledge from faculty in both colleges to provide you with a unique understanding of math, computing, and technology. This approach enhances your learning outcomes and increases career marketability.

What You’ll Learn

- Concepts and skills in machine learning to prepare you to build, tune, and discover actionable insights from predictive models
- Programming language skills in Python and Java to be able to synthesize large unstructured data sets
- Competencies in data mining, regression analysis, text mining, and predictive analytics
- How to create, critically assess, interpret, and communicate rich visualizations

A Data Science Master’s Curriculum Packed with High-Demand Skills

The explosive growth in demand for data science skills is disrupting today's job markets. These skills are found in over half of all job postings related to this field.

- Data Analytics: Data analysis skills are projected to grow in demand to 82% by 2026, and machine learning skills are growing by 1-2%.
- Data Science: Demand for skills in artificial intelligence is growing by 128% and deep learning skills demand is growing by 135%.
- Software and Programming: Demand for expertise in Python is growing by 21%; blockchain skills are growing by 245%.
- Experimental Design: Crossover, adaptive, and equivalence designs are dominating 38% of this job market.

Designed for working professionals studying on campus or online part-time, this degree program has a strong career focus. You'll learn both practical and theoretical skills to handle large-scale data management and analysis challenges ever-present in today’s data-driven organizations. This program places a unique focus on training data scientists in strong software engineering skills so that they can effectively develop real-world data science applications which operate within modern organizations' computational workflows. You’ll be learning with students from varied professional backgrounds and working with practitioners active in the field to provide hands-on experience solving real problems.

Experiential Learning

Cooperative Education

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Admission requirements

This program is available on-campus or online.

On Campus

- **Offered Full-time**
  - Full-time Admit Term(s): Fall
  - Full-time Application Deadline: Rolling
  - Full-time STEM Designated: Yes

- **Offered Part-time**
  - Part-time Admit Term(s): Fall or Spring
  - Part-time Application Deadline: Rolling
  - Part-time STEM Designated: No

Online

- **Offered Part-time**
  - Part-time Admit Term(s): Fall or Spring
  - Part-time Application Deadline: Rolling
  - Part-time STEM Designated: No

Full-time study is 9+ semester credit hours; part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Data Science program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: GRE required for individuals with degrees from international universities. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 88
- IELTS: 6.5
- PTE Academic: 60

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Prerequisites

It is expected that prospective students will have a sufficient background in object-oriented programming. However, accepted students without this prerequisite knowledge may complete prescribed bridge course(s) that are available.

Bridge Courses

Students whose undergraduate preparation or employment experience does not satisfy the prerequisites can make up for this by completing prerequisite bridge course(s), as prescribed by the graduate program director. The bridge course(s) are not part of the 30-semester credit hours required for the master’s degree. Grades for bridge course(s) are not included in a student’s GPA if taken before matriculation; they are included if completed after matriculation. Since bridge programs can be designed in a variety of ways, the graduate program director will assist students in planning and course selection.

Online Degree Information

The online Data Science MS program can only be completed part-time, taking one or two courses per term. The average time to completion is two and a half to three years. For the fully online Data Science MS, core classes are offered asynchronously, as are many electives. Students can complete the degree without any synchronous courses. Program electives are slightly more limited than courses available in the on-campus program, and some may be synchronous only. Any live group discussions or class meetings are typically optional and may be recorded, and students should connect with their professor to obtain the material. Students typically spend 10-12 hours per week per class, depending on the content and their background knowledge. The online program culminates with a capstone course and capstone project. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

Online Tuition Eligibility

The online Data Science MS is a designated online degree program that is billed at a 43% discount from our on-campus rate. View the current online tuition rate.
Game Design and Development, MS
www.rit.edu/study/game-design-and-development-ms
David Simkins, Associate Professor
dwsimkins@mail.rit.edu

Program overview
Explore the simulation, edutainment, or visualization landscape as you enhance your game design and development skills to create truly innovative games.

In the game design master’s degree, you will explore the entertainment technology landscape as well as other related areas. The program simultaneously covers the breadth of the game design and development landscape through study in topics such as computer graphics, game engines, interactive narrative, and game world design. The program is characterized by a clear focus on development, but also educates developers in the design process. The degree is intended specifically for students who aspire to hold careers within the professional games industry or a related field such as simulation, edutainment, or visualization.

RIT’s Game Design Master’s
The curriculum in the game design master’s program consists of required courses, a choice of five advanced electives, and a capstone experience. This is a two-year, on-campus, cohort-based program in which students are admitted through a portfolio review process. During the second year, students form development teams that construct a working game engine and software title as the program capstone experience. This requirement includes both individual and group expectations. The capstone culminates in a defense, public presentation, and demonstration before program faculty. Combined, these requirements provide a unique and comprehensive educational experience for individuals who aspire to a career in the game development industry.

Launch your Digital Endeavors with MAGIC
The MAGIC Center is a digital sandbox for students and faculty pushing the boundaries of technology, art and design. It includes five state-of-the-art classrooms built around delivering hands-on curriculum in game design, 2D and 3D animation, and digital design. Students learn on the same hardware and software platforms used in industry while honing their technical and creative skills. A fully outfitted sound stage and post-production studios further enhance experiential education opportunities and permit faculty to introduce real-world film, animation, and digital media workflows to the classroom.

Experiential Learning

Cooperative Education
What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next hires.

Cooperative education is optional but strongly encouraged for graduate students in the game design and development program.

Creative Industry Day
RIT’s Office of Career Services and Cooperative Education hosts Creative Industry Day, which connects students majoring in art, design, film and animation, photography, and select computing majors with companies, organizations, creative agencies, design firms, and more. You’ll be able to network with company representatives and interview directly for open co-op and permanent employment positions.

Admission requirements
This program is available on-campus only.

Offered Full-time
Full-time Admit Term(s): Fall
Full-time Application Deadline: January 31 priority deadline, rolling thereafter
Full-time STEM Designated: Yes

Full-time study is 9+ semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details
To be considered for admission to the Game Design and Development program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
• Hold a baccalaureate degree (or US equivalent) from an accredited university or college in a relevant field such as game design, game development, information technology, computer science, software engineering, or computer graphics. Others with a strong background in a games-related field and some background in computing sciences may be considered.
• A recommended minimum cumulative GPA of 3.25 (or equivalent).
• Submit a current resume or curriculum vitae.
• Submit a personal statement of educational objectives.
• Submit two letters of recommendation.
• Entrance exam requirements: None
• Submit a portfolio. Requirements are listed on the Graduate Admissions website.
• Writing samples are optional.
• Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores
International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

TOEFL: 100
IELTS: 7.0
PTE Academic: 70

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid
An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Prerequisites
Applicants are expected to have at least one year of programming experience in a widely-used object-oriented language (C++, C#, or Java preferred) and some experience with web development.

Bridge Courses
Applicants without significant programming experience in a current object-oriented language (C++, C#, or Java preferred) and a solid working knowledge of website development and interactive multimedia concepts will need to complete IGME 206 to bridge any educational gaps. The bridge course will not count toward degree completion.

Health Informatics, MS
www.rit.edu/study/health-informatics-ms
Christopher Bondy, Professor of Practice
585-475-2755, cbxbppr@rit.edu

Program overview
With an increase in the application and use of computing in the health care industry, there is an unprecedented need for professionals who can harness the creative power of information technology to make an impact on the acquisition, storage, management, and retrieval of patient data, as well as access medical data needed to improve patient care, research, and education. A health informatics masters provides professionals with an understanding of formal medical terminology, clinical processes, and guidelines; and an understanding of how information and communication systems can be used to successfully deliver patient information in various health care settings.

RIT’s Master’s in Health Informatics: Offered Exclusively Online
The MS in health informatics applies the creative power of information technology to the information and data needs of health care.

The program is designed for working professionals in diverse health care clinical and technology settings. The curriculum consists of core courses that focus on software development, system integration, data analysis, data intelligence, clinical application building, systems analysis, and project management. The MS in health informatics draws upon the interdisciplinary strengths of the colleges within RIT, along with its health care partner, Rochester Regional Health System (RRH).

The online health informatics MS program includes a three day in-person immersion session held onsite at Rochester Regional Health (RRH), a Rochester area health care provider. This valuable, applied learning experience allows you to shadow RRH clinicians to understand disease processes, clinical workflows, and the use of clinical information technology in a real-world health care setting. This onsite component typically occurs in mid-June. If you have questions or concerns about this unique opportunity, please contact the program coordinator.

Program Highlights
Employers are seeking professionals who can investigate the needs of real people, manage and structure data to fairly represent the world, connect people and data across devices and networks, visualize patterns to support decisions, and ensure that technologies are evaluated with real users.

Health Informatics is the interdisciplinary study of the design, development, adoption, and application of IT-based innovations in health care services delivery, management, and planning. This degree program is designed to equip health care professionals with vital skills to fill emerging health information technology roles. This degree program prepares you for success in today’s complex health care field through the interplay of people, information, and technology. In this program, you will learn how information is used to advance knowledge and improve health care, preparing you for future computing careers that require more than just programming. Our unique blend of RIT informatics faculty and Rochester Regional Health clinical experts provides students with the data analytics, programming, and clinical experience to combine theory and practice.
Key Features

- Comprehensive foundation in health informatics
- Practical use of data in the health care setting
- Clinical faculty from Rochester Regional Health
- Study with board-eligible practicing physicians

Designed for working professionals, this 100% online degree may be completed in two years. We offer two 7-week courses per semester and two summer courses. An optional 7-week on-site immersive session at Rochester Regional Health provides the opportunity for experiential learning.

A Health Informatics Curriculum Packed with High-Demand Skills

- Data Science: Demand for data science skills will grow 112% and machine learning by 102%.
- Data Analytics: Data analysis skills will grow 82% and big data skills by 22%.
- Process Design: Quality assurance and control skills are growing by 40%.

Admission requirements

This program is available on-campus or online. The following admissions details apply to the on-campus program.

Offered Part-time
Part-time Admit Term(s): Fall
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Part-time study is 11-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Health Informatics program, candidates must fulfill the following requirements:
- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae demonstrating a minimum of three years of experience in a health care, health-related, or information technology organization.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Complete an interview with the program chair (applies to applicants without health care or IT work experience).
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

</table>

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Bridge Courses

It is recommended that applicants have a minimum of three years of experience in a health care, health-related, or information technology organization. Applicants who do not meet this requirement may be asked to complete certain undergraduate courses as a bridge for the content knowledge required for the graduate program.

Online Delivery

This program is offered exclusively online. Courses are fully asynchronous designed to accommodate working professionals that wish to complete program coursework at a time that suits their personal schedule. Coursework deliverables and assignments are typically due by a specific date/time during each week of the course.

Online Degree Information

Courses in the online Health Informatics MS are all asynchronous and are designed to accommodate working professionals that wish to complete program coursework at a time that suits their personal schedule. The program is cohort-based with students starting their studies in the fall, and moving through the course sequence together by taking two 7-week courses and two summer courses. This 100% online degree can be completed in two years. This degree also includes a three-day in-person immersion on-site at a Rochester healthcare facility. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

Online Tuition Eligibility

The online Health Informatics MS is a designated online degree program that is billed at a 43% discount from our on-campus rate. View the current online tuition rate.

Golisano College of Computing and Information Sciences
Human-Computer Interaction, MS

www.rit.edu/study/human-computer-interaction-ms
Qi Yu, Professor
585-475-6929, Qi.Yu@rit.edu

Program overview

Explore the design methods, evaluation, and implementation of interactive computing systems for human use. Building on decades of research in psychology and human behavior, the human-computer interaction master’s degree focuses on the skills needed by user-experience researchers and computing professionals, including observing how people interact with websites and software and the design new technologies to help them accomplish their goals. With computing moving rapidly away from the traditional desktop, companies need professionals that understand how evolving technologies can be designed to be intuitive, effective, and compelling for users.

RIT’s Human-Computer Interaction Master’s Degree: On-Campus or Online

Human-computer interaction (HCI) addresses the design, evaluation, and implementation of interactive computing and computing-based systems for the benefit of human use. HCI research is driven by technological advances and the increasing pervasiveness of computing devices in our society. With an emphasis on making computing technologies more user-friendly, HCI has emerged as a dynamic, multifaceted area of study that merges theory from science, engineering, and design—as well as concepts and methodologies from psychology, anthropology, sociology, and industrial design—with the technical concerns of computing.

The human-computer interaction master’s degrees provides the knowledge and skills necessary for conceptualizing, designing, implementing, and evaluating software applications and computing technologies for the benefit of the user, whether the user is an individual, a group, an organization, or a society. Human, technological, and organizational concerns are interwoven throughout the curriculum and addressed in team- and project-based learning experiences.

Human-Computer Interaction Curriculum: Packed with High-Demand Skills

- Research: Demand for user research skills is growing 35%, and carries a competitive advantage in the marketplace.
- UI/UX: Information architecture skills carry a salary premium in the workforce.
- Design Thinking: Demand for design thinking skills is growing 112%.
- Development: Demand for front-end development skills is growing 12% and carries a salary premium.

Human-Computer Interaction Master’s Courses

The core courses provide knowledge and skills in the conceptual and methodological frameworks of HCI and HCI research. Emphasis is on understanding human cognition as it applies to information systems plus interaction design, interface prototyping, and usability evaluation.

Program Electives: Students select two elective courses. In select cases, students can petition for approval to include a course complementary to the degree program as a program elective.

Application Domain Courses: To gain breadth in a technical area to which HCI concepts can be applied, students complete two courses in any of the application domain areas. A special topics option is also available, with faculty approval, for individuals with interest in other HCI-related areas.

- e-Learning Technologies—The recent boom in online learning has created a need for professionals to design such systems. Students learn the fundamentals of instructional technology and interactive courseware.
- Geographical Information Science and Technology—Research how digital technology is revolutionizing how humans view earth with topics in thematic cartography and geographic visualization.
- Self-defined Application Domain—Design your own concentration.
- Smart Device Application Design and Development—Smart devices are no longer limited to phones. Design and study human interaction with cutting-edge mobile technology.
- Web Development—Study the foundations of web technologies, enabling students to better understand how the Internet can be built to improve the experience of a diverse range of end-users.

Thesis/Capstone Project: Students may complete a thesis or capstone project. This experience is meant to be an empirical study of a HCI problem, which can be the development of a software product through user-centered design processes. The results are either published in a peer-reviewed journal or publicly disseminated in an appropriate professional venue.

Experiential Learning

Cooperative Education

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Cooperative education is optional but strongly encouraged for graduate students in the human-computer interaction program.

Creative Industry Day

RIT’s Office of Career Services and Cooperative Education hosts Creative Industry Day, which connects students majoring in art, design, film and animation, photography, and select computing majors with companies, organizations, creative agencies, design firms, and more. You’ll be able to network with company representatives and interview directly for open co-op and permanent employment positions.

**Online**

Offered Part-time
Part-time Admit Term(s): Fall or Spring
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

**Application Details**

To be considered for admission to the Human-Computer Interaction program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: GRE required for individuals with degrees from international universities. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

**English Language Test Scores**

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 88
- IELTS: 6.5
- PTE Academic: 60

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.
**Cost and Financial Aid**

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

**Additional Information**

**Prerequisites**
The program requires strong technical and social science skills. Knowledge of quantitative statistical methodologies is important since students review research studies as well as analyze the results of their own usability evaluations. Students are also expected to have a solid background in computer programming. These competencies may be demonstrated by previous course work, technical certifications, or comparable work experience. Bridge courses are available to fulfill any gaps in an applicant’s qualifications. Applicants will be made aware of any areas where additional course work may be necessary.

**Online Degree Information**
The Human-Computer Interaction MS program is designed to be completed part-time (1 or 2 courses per term). Full-time options may be available with Graduate Program Director’s approval. Time to completion will depend on the student's individual plan of study, when courses are offered, what electives are selected, and if the student takes a summer course. Advisors work closely with students after admission on course registration. Typically students finish this degree in 2 years. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

**Online Tuition Eligibility**
The online Human-Computer Interaction MS is a designated online degree program that is billed at a 43% discount from our on-campus rate. View the current online tuition rate.

---

**Information Technology and Analytics, MS**

**Program overview**

Technology has woven itself into the fabric of society, binding people and information closer together than ever before. This evolving digital era brings with it exciting innovations. It also brings a host of new, unexplored problems that can be unlocked through data analytics. RIT’s master’s of information technology and analytics provides an opportunity for in-depth, career-oriented study that explores how information is understood and leverages the most current data analytics techniques to address industry problems.

The internet has brought a new kind of democracy where all information is created equal. No longer the sole province of experts and the traditional media, it has become grassroots, viral, and global. The sheer volume and lightning speed of information transfer has changed how the world communicates, educates, learns, and ultimately solves problems. As the web and its related technologies evolve, users need help in managing these new tools.

**A Growing, In-Demand Field**

Demand for information technologists, data scientists, and data-driven decision-makers across all fields now comprise one-third of the data-savvy professional job market. The MS degree in information technology and analytics addresses this demand at the intersection of information technology and data science. With a program rich in analytics and in-depth, career-oriented study, you will explore how information is organized, verified, analyzed, and applied in today’s data-rich environment.

**An Information Technology Master’s Degree That Combines IT and Analytics**

Graduate study in a computing discipline that only focuses on traditional computing approaches is not flexible enough to meet the needs of the real world. New hardware and software tools are continually introduced into the market. IT professionals must have a specific area of expertise, as well as adaptability, to tackle the next new thing. Or, just as often, retrofit available technologies to help users adapt to the latest trends.

RIT’s master’s of information technology and analytics provides an opportunity for in-depth study that prepares you for today’s high-demand computing careers. Companies are drowning in data—structured, semi-structured, and unstructured. Big data is not just high transaction volumes; it is also data in various formats, with high velocity change, and increasing complexity. Information is gleaned from unstructured sources—such as web traffic or social networks—as well as traditional ones; and information delivery must be immediate and on demand.

This degree shares curriculum with the data science master’s degree, and is of particular value to professionals in the field of information technology who need to upskill in data science knowledge to handle the huge volumes of data organizations must utilize. In this degree, you will apply critical, analytical thinking to database design, management, and mining.

As the users’ advocate, IT professionals also need the critical thinking skills to problem-solve in a wide variety of computing situations, combined with an understanding of the needs of their audience. Just knowing how technology works is no longer enough. Today, computing professionals need to know how to make it all work.
RIT’s Master’s of Information Technology and Analytics: On-Campus or Online

The master’s of information technology and analytics program addresses the web systems and integration technologies, and the information management and database technology pillars, of the IT academic discipline, along with the additional option of discovery informatics.

Domain Electives—Chosen only by those enrolled in the on-campus option, domain electives are available in: analytics, information management and database technology, or web systems and integration technologies. With permission of the graduate program director, students may select the special topics track to fulfill this requirement. See the graduate program director for more information.

Thesis/Capstone Options—For the on-campus option of the program, students may choose a project or a thesis to build upon their domain of study. The project option requires one additional domain elective. The thesis option does not require an additional elective. The online option consist of a capstone project.

An IT and Analytics Curriculum Packed with High-Demand Skills

In this degree, you will apply critical, analytical thinking to database design, management, and mining.

- Data Analytics: Demand for data analytics skills are growing 82%, and expertise in big data carries a salary premium.
- Data Visualization: Demand for Tableau skills are growing 87%.
- Software and Programming: Demand for these skills is growing 61%.
- SQL: Nearly half of all postings for jobs in this field require advanced SQL skills.

Demand for information technologists, data scientists, and data-driven decision-makers across all fields now comprise one-third of the data-savvy professional job market. The MS degree in information technology and analytics addresses this demand at the intersection of information technology and data science. With a program rich in analytics and in-depth, career-oriented study, you will explore how information is organized, verified, analyzed, and applied in today’s data-rich environment.

Admission requirements

This program is available on-campus or online.

On Campus

Offered Full-time
Full-time Admit Term(s): Fall or Spring
Full-time Application Deadline: Rolling
Full-time STEM Designated: Yes
Offered Part-time
Part-time Admit Term(s): Fall or Spring
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Online

Offered Part-time
Part-time Admit Term(s): Fall
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Information Technology and Analytics program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
Golisano College of Computing and Information Sciences

- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: GRE required for individuals with degrees from international universities. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

**English Language Test Scores**

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

<table>
<thead>
<tr>
<th>Test</th>
<th>Minimum Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOEFL</td>
<td>88</td>
</tr>
<tr>
<td>IELTS</td>
<td>6.5</td>
</tr>
<tr>
<td>PTE Academic</td>
<td>60</td>
</tr>
</tbody>
</table>

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

**Cost and Financial Aid**

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

**Additional Information**

**Prerequisites**

It is expected that prospective students will have a background in fundamental information technology concepts including object-oriented programming, website development, database theory and practice, and statistics. Students without the necessary background should complete the prerequisites before applying to the program. However, bridge courses are available to satisfy the prerequisites.

**Bridge Courses**

Students whose undergraduate preparation or employment experience does not satisfy the prerequisites can make up for these deficiencies by completing prerequisite bridge courses as prescribed by the graduate program director. The bridge courses are not part of the 30-semester credit hours required for the master’s degree. Grades for bridge courses are not included in a student’s GPA if the courses are taken before matriculation; they are included if completed after matriculation. Since bridge programs can be designed in a variety of ways, the graduate program director will assist students in planning and course selection.

**Online Degree Information**

The Human-Computer Interaction MS program is designed to be completed part-time (1 or 2 courses per term). Full-time options may be available with Graduate Program Director’s approval. Time to completion will depend on the student’s individual plan of study, when courses are offered, what electives are selected, and if the student takes a summer course. Advisors work closely with students after admission on course registration. Typically students finish this degree in 2 years. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

---

**Online Tuition Eligibility**

The online Information Technology and Analytics MS is a designated online degree program that is billed at a 43% discount from our on-campus rate. View the current online tuition rate.
Software Engineering, MS

www.rit.edu/study/software-engineering-ms
J Scott Hawker,
585-475-2705, jshvse@rit.edu

Program overview

As you pursue a software engineering master’s degree, your educational experience will parallel the realities of the industry as you learn how to define, design, develop, and deliver modern software. Utilize computer science theories to create software that allows computers to meet the demands of an ever-changing, technologically-dependent society. Conduct research in many areas including data science for software engineering, artificial intelligence applications in software engineering, software modeling. Gain hands-on experience through team-based projects that help you master modern software engineering techniques.

RIT is renowned for its cooperative education program, one of the oldest and largest programs in the world. Co-op is full-time, paid work experience in industry. A number of graduates from the software engineering master’s degree are employed at companies such as Citrix, SpaceX, Intuit, Amazon, Microsoft, and many others.

RIT’s Master’s in Software Engineering

Since these systems are rarely the result of a single individual’s effort, RIT’s master’s in software engineering focuses on a team-based approach that recognizes the significant role teams play in the design, development, and implementation of software systems of varying size and complexity. You will be actively engaged in software architecture, software security, and mining of software repositories research. And, you will be involved in the software engineering department’s emerging areas of research in data science for software engineering and software engineering for data science. As a result, our software engineering master’s degree prepares you to contribute to and lead software development projects from day one.

Software Engineering Courses

RIT’s master’s in software engineering accepts students from many educational backgrounds, including recent undergraduates and professionals interested in pursuing a software engineering career. An introductory course, Software Construction, helps students get up to speed on programming and basic computing concepts. We also have an introductory core course, Software Engineering Fundamentals. Students with degrees in engineering, science, business, and education have all bee successful graduates of our program. Our students master modern software engineering techniques in a team setting using state-of-the-art tools and platforms.

With careful selection of your electives and the topics chosen for your course projects and capstone project or thesis research, you may focus on core software engineering topics, or you may specialize in the applications of software engineering to numerous fields, including:

- Data Science: Courses are available in areas such as Foundations of Data Science, Software Engineering for Data Science, Applied Data Science, Engineering Cloud Software Systems, etc.
- Full-Stack Web Development: Courses are available in areas such as Software Architecture, Client Design and Development, Server Design and Development, and Secure Web Application Development.
- Technology and Project Management: You may take courses from RIT’s MS in business analytics or MS in technology innovation management and entrepreneurship.

In RIT’s software engineering department, you will learn and receive personalized attention from faculty who are working in many areas of software engineering and its applications. Outfitted with the latest hardware and software technology, our facilities include studio labs, project labs, team rooms, a collaboration lab, and a real-time and embedded systems lab—all designed to help you collaborate on projects, polish your skills, and collaborate with faculty. The department has partnered with a number of software companies to provide you with access to a wide range of software products for learning and research.

Experiential Learning

Cooperative Education

What’s different about RIT’s engineering education? It’s the opportunity to complete engineering co-ops and internships with top companies in every single industry. You’ll earn more than a degree. You’ll gain real-world career experience that sets you apart.

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart.

Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Software Engineering program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: GRE required for individuals with degrees from international universities. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 88
- IELTS: 6.5
- PTE Academic: 60

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Bridge Courses

Candidates without a computing background will be considered. Based on the evaluation of academic and relevant experience, the graduate program director may require some applicants to successfully complete bridge courses to fill in any gaps in their background.

www.rit.edu/study/web-development-adv-cert
Qi Yu, Professor
585-475-6929, Qi.Yu@rit.edu

Program overview

As interactive technologies advance, the ways in which we communicate change—and the importance of enhancing the communication experience within electronic environments increases. The advanced certificate in web development provides an opportunity for students to gain firsthand knowledge and expertise in the art and science of interactive multimedia design.

RIT’s Graduate Certificate in Web Development

Students explore the theories of interactive computing, fundamentals of interactive design, web and multimedia programming, and the impact of networked technologies in web communications. Projects include the development of websites and interactive multimedia applications. Students have at their disposal a variety of computer, video, and digitizing equipment in our state-of-the-art interactive media laboratories.

What is a Graduate Certificate?

A graduate certificate, also called an advanced certificate, is a selection of up to five graduate level courses in a particular area of study. It can serve as a stand-alone credential that provides expertise in a specific topic that enhances your professional knowledge base, or it can serve as the entry point to a master’s degree. Some students complete an advanced certificate and apply those credit hours later toward a master’s degree.

Cost and Financial Aid
An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Prerequisites
Due to continuing advances in the technologies used for interactive multimedia, knowledge of programming is necessary in this field. Students must have object-oriented programming skills equivalent to one year of study. Bridge courses are available to complete any requirements missing from the applicant's credentials.
Faculty

Matt Huenerfauth, MS, University of Delaware; MSc, University College Dublin (Ireland); Ph.D., University of Pennsylvania—Dean; Professor

Michael A. Yacci, BS, Ithaca College; MS, Rochester Institute of Technology; Ph.D., Syracuse University—Senior Associate Dean for Academic Affairs; Professor

Pengcheng Shi, BS, Shanghai Jiao Tong University (China); MS, M Phil, Ph.D., Yale University—Doctorate Program Director; Associate Dean for Research and Scholarship; Professor

Institute of Technology—Lecturer

Warren Carithers, BS, MS, University of Kansas—Associate Professor

Mary Cepeda, BS, Antonio Machado Education Institute (Spain); MS, Rochester Institute of Technology—Lecturer

Aham Chaaben, BS, MS, University of Sfax Higher Institute of Computer Science—Lecturer

Eduardo Coelho De Lima, MS, Ph.D., Rochester Institute of Technology—Lecturer

Matthew Fluet, BS, Harvey Mudd College; Ph.D., Cornell University—Associate Professor

Joe Geigel, BS, Manhattan College; MS, Stevens Institute of Technology; Ph.D., George Washington University—Professor

Edith Hemaspanda, BS, MS, Ph.D., University of Amsterdam (Netherlands)—Professor

Christopher Homan, AB, Cornell University; MS, Ph.D., University of Rochester—Associate Professor

Ifeoluwatoya Ige, MS, Ph.D., University of Obadan (Nigeria)—Lecturer

Scott Johnson, BS, MS, Rochester Institute of Technology—Senior Lecturer

Thomas Kinsman, BS, University of Delaware; MS, Carnegie Mellon University; Ph.D., Rochester Institute of Technology—Senior Lecturer

Mohan Kumar, BE, Bangalore University (India); M Tech, Ph.D., Indian Institute of Science (India)—Professor

Minseok Kwon, BS, MS, Seoul National University (South Korea); Ph.D., Purdue University—Associate Chair; Associate Professor

Xumin Liu, BE, Dalian University of Technology (China); ME, Jinan University (China); Ph.D., Virginia Polytechnic Institute and State University—Associate Professor

Michael Mior, BS, University of Ontario (Canada); MS, University of Toronto (Canada); Ph.D., University of Waterloo (Canada)—Assistant Professor

Arthur Nunes-Harwitt, BS, Brandeis University; MS, University of Pittsburgh; Ph.D., Rochester Institute of Technology—Senior Lecturer

Jansen Orfan, BS, Monmouth University; MS, University of Rochester—Lecturer

Alex Ororbia, BS, Bucknell University; MS, Ph.D., Pennsylvania State University—Assistant Professor

Stanislaw Radziszowski, MS, Ph.D., University of Warsaw (Poland)—Professor

Muhammed Mustapha Rafique, BS, National University of Computer and Emerging Sciences (Pakistan); MS, Ph.D. Virginia Tech University—Assistant Professor

Rajendra K. Raj, BS, Indian University of Technology (India); MS, University of Tennessee; Ph.D., University of Washington—Professor

Carlos Rivero Osuna, BS, MS, Ph.D., University of Seville (Spain)—Associate Professor

Leonid Reznik, Degree of Electronics, Leningrad Institute of Aeronautical Construction (Russia); MS, St. Petersburg Aircraft Academy (Russia); Ph.D., St. Petersburg Polytechnic Institute (Russia)—Professor

Sean Strout, BS, MS, Rochester Institute of Technology—Principal Lecturer

Phil White, BS, Clarkson College; MS, Rochester Institute of Technology—Principal Lecturer

Richard Zanibbi, BA, MS, Ph.D., Queens University (Canada)—Professor

Cybersecurity

Matthew Wright, BS, Harvey Mudd College; MS, Ph.D., University of Massachusetts—Department Chair; Professor

Hrishikesh Bhattacharya, BTech, Indian Institute of Technology (India); Ph.D., University of Texas at Austin—Assistant Professor

Ivan De Oliveira Nunes, BE, Federal University of Espirito Santo; MS, Federal University of Minas Gerais; Ph.D., University of California at Irvine—Assistant Professor

Ahmed Hamza, MS, Georgetown University; Ph.D., University of Portsmouth (United Kingdom)—Undergraduate Program Director; Lecturer

Yidan Hu, BE, MS, Hangzhou Dianzi University; Ph.D. University of Delaware—Assistant Professor

Daryl Johnson, BS, St. John Fisher College; MS, Rochester Institute of Technology—Associate Professor

Sumita Mishra, BS, Patna University (India); BS, Ph.D., State University of New York at Buffalo—Professor

Rob Olson, BS, MS, State University College at Fredonia; MS, Nova Southeastern University—Senior Lecturer

Yin Pan, BS, MS, Shanghai Normal University (China); MS, Ph.D., State University of New York at Binghamton—Professor

Gahyun Park, BS, Ewha Womans University (South Korea); MS, Ph.D., Purdue University—Senior Lecturer

Justin M. Pelletier, BS, Stonehill College; MBA, Rochester Institute of Technology; Ph.D., Capella University—Lecturer

Hanif Rahbani, BS, Sharif University of Technology (Iran); MS, Amirkabir University (Iran); Ph.D., University of Arizona—Assistant Professor

William Stackpole, BS, Roberts Wesleyan College; MS, Rochester Institute of Technology—Professor

Jonathan S. Weissman, BS, College of Staten Island; MA, Brooklyn College—Senior Lecturer

Bo Yuan, BS, MS Shanghai Normal University (China); Ph.D., State University of New York at Binghamton—Department Chair; Professor
School of Information

Eva Navarro López, BS, BE; ME; Ph.D., Universidad de Alicante (Spain); Ph.D., Universitat Politécnica de Catalunya (Spain)—School Director; Professor

Garret Arcoraci, State University College at Brockport—Lecturer

Catherine I. Beaton, BA, B.Ed., MITIE, Dalhousie University (Canada)—Associate Professor

Yusuf Bilgic, BS, Marmara University; MS, Ph.D., Western Michigan University—Associate Professor

Daniel S. Bogard, BFA, Indiana University; MS, Rochester Institute of Technology—Undergraduate Program Director; Associate Professor

Stephen Cady, BA, Brooks Institute; BA, Antioch University; MFA, University of Illinois—Visiting Lecturer

Bryan French, BA, State University College at Potsdam; MS, Rochester Institute of Technology—Senior Lecturer

Dean Ganskop, BS, MS, Rochester Institute of Technology—Lecturer

Erik Golen, BS, Ph.D., Rochester Institute of Technology—Lecturer

James Habermas, BA, MS, State University College at Brockport—Visiting Lecturer

Bruce H. Hartpence, BS, MS, Rochester Institute of Technology—Professor

Lawrence Hill, BS, MS, Rochester Institute of Technology—Networking and Systems Administration Program Coordinator; Associate Professor

Edward Holden, BA, State University College at Oswego; MBA, Rochester Institute of Technology—Associate Professor

Jai Kang, BS, Seoul National University (South Korea); MA, Kent State University; MS, Georgia Institute of Technology; Ph. D., State University of New York at Buffalo—Associate Professor

Jeffrey A. Lasky, BBA, City College of New York; MBA, City University of New York; MS, University of Minnesota—Professor Emeritus

Sharon P. Mason, BS, Ithaca College; MS, Rochester Institute of Technology; Ph.D., University of Buffalo—Professor

Tae (Tom) Oh, BS, Texas Tech University; MS, Ph.D., Southern Methodist University—Professor

Sylvia Perez-Hardy, BS, MBA, Cornell University—Associate Professor

Nirmala Shenoy, BE, ME, University of Madras (India); Ph.D., University of Bremen (Germany)—Professor

Kristen Shinhara, BS, University of Puget Sound; MS, University of Washington-Tacoma; Ph.D., University of Washington-Seattle—Assistant Professor

Elissa M. Weened, BS, MS, Rochester Institute of Technology; Ed.S., Ph.D., Nova Southeastern University—Associate Professor—Associate Professor

Qi Wu, BE, Zhejiang University (China); MS, National University of Singapore (Singapore); Ph.D., Virginia Polytechnic Institute and State University—Professor Emeritus

Jaya Prakash, BS, Marmara University; MS, Ph.D., Western Michigan University—Lecturer

Yusuf Bilgic, BS, Marmara University; MS, Ph.D., Western Michigan University—Lecturer

Sean Boyle, BS, MS, Rochester Institute of Technology—Principle Lecturer

Christopher Cascioli, BS, MS, Rochester Institute of Technology—Lecturer

Erin Cascioli, BS, MS, Nazareth College—Lecturer

Carlos Castellanos, BA, San Francisco State University; MFA, San Jose State University; Ph.D., Simon Fraser University—Assistant Professor

Christopher A. Egert, BS, MS, Rochester Institute of Technology; Ph.D., University at Buffalo—Associate Professor

Stephen Kurtz, BA, University of Miami; MFA, MS, Rochester Institute of Technology—Professor Emeritus

Gordon Goodman, BA, State University of New York at Binghamton; MS (instructional technology), MS (computer science), Rochester Institute of Technology—Professor Emeritus

W. Michelle Harris, MPS, New York University—Associate Professor

Jay Alan Jackson, BS, MS, Ph.D., Florida State University—Associate Professor

Stephen Jacobs, BA, MA, New School for Social Research—Professor

Anthony Jefferson, BS, State University College at Oswego; MS, Rochester Institute of Technology—Principle Lecturer

Elizabeth Lane Lawley, AB, MLS, University of Michigan; Ph.D., University of Alabama—Professor

Nicholas LaLone, BS, MA, Texas State University; Ph.D., Pennsylvania State University—Assistant Professor

Sten McKinzie, BS, MS, Rochester Institute of Technology—Lecturer

Erika Mesh, BS, MS, Rochester Institute of Technology—Lecturer

Elouise Oyzon, BFA, MFA, Rochester Institute of Technology—Associate Professor; Undergraduate Program Director

Konstantinos Papangelis, BS, University of Huddersfield (United Kingdom); MS, University of Lancaster (United Kingdom); Ph.D., University of Aberdeen (United Kingdom); Fellow of the Royal Society of the Arts—Assistant Professor

Chao Peng, B.Arch., Hebei University of Engineering (China); MFA, University of Alaska Fairbanks; Ph.D., Virginia Polytechnic Institute and State University—Associate Professor

Justus Roberston, BS, MS, Ph.D., North Carolina State University—Assistant Professor

David Simkins, BS, MS, North Carolina State University—Lecturer

Brian Tomaszewski, BA, University of Albany; MA, University at Buffalo; Ph.D., Pennsylvania State University—Professor

Andrew Wheeland, MS, Rochester Institute of Technology—Lecturer

Austin Willoughby, BS, MS, Rochester Institute of Technology—Lecturer

Software Engineering

Naveen Sharma, BS, Indian Institutes of Science (India); Ph.D., Kent State University—Department Chair; Professor

Bruce Herring, BS, MS Florida State University—Senior Lecturer

Larry Liker, BS, Roberts Wesleyan College; MS, Rochester Institute of Technology—Senior Lecturer

Samuel Malachowsky, BBA, State University of New York at Buffalo; MBA, Medaille College—Senior Lecturer
Kenn Martínez, BS, Syracuse University; MS, Rensselaer Polytechnic Institute—Senior Lecturer

Andy Meneely, BA, Calvin College; Ph.D., North Carolina State University—Undergraduate Program Director; Associate Professor

Kal Rabb, BS, University of Rochester; MS, Rochester Institute of Technology—Lecturer

Sophia Sandhu, BS, Panjab Technical University; MS, University of Toledo—Lecturer

Bob St. Jacques, BS, MS, Rochester Institute of Technology—Senior Lecturer

AbdulMutalib (Abdul) Wahaishi, BS, University of Tripoli; MS, Ph.D., University of Western Ontario—Visiting Lecturer

Computing and Information Sciences

Pengcheng Shi, BS, Shanghai Jiao Tong University (China); MS, M.Phil., Ph.D., Yale University—Doctorate Program Director; Professor; Associate Dean for Research and Scholarship

Rui Li, BS, Harbin Institute of Technology (China); MS, Tianjin University of Technology (China); Ph.D., Rochester Institute of Technology—Assistant Professor

Linwei Wang, BS, Zhejiang University (China); M.Phil., Hong Kong University of Science and Technology (Hong Kong); Ph.D., Rochester Institute of Technology—Professor

Haibo Yang, BS, MS, Lanzhou University (China); Ph.D., Iowa State University—Assistant Professor
The Kate Gleason College of Engineering offers comprehensive, innovative graduate programs in a broad range of engineering disciplines. Programs include master of science degrees, master of engineering degrees, advanced certificates, and broad-based, cross-disciplinary doctoral programs in engineering and microsystems engineering.

Please visit the college’s website—www.rit.edu/engineering—for in depth information on academics, faculty, facilities, research initiatives, advising, and more.

**Admission requirements**

Each college makes all decisions regarding graduate admission. Please refer to the individual program descriptions for information regarding specific admission criteria. For general graduate admission information, please refer to the Admission section of this bulletin.

**Financial aid and scholarships**

Please refer to the Financial Aid and Scholarship section of this bulletin for information regarding financial aid, scholarships, grants, loans, and graduate assistantships.

Biomedical and Chemical Engineering, Ph.D.

www.rit.edu/study/biomedical-and-chemical-engineering-phd

Tom Gaborski, Professor
585-475-4117, trgabme@rit.edu

Program overview

The biomedical and chemical engineering Ph.D. program provides you with the knowledge, training, and expertise to tackle important problems in industry, academia, government, and health care.

In the biomedical and chemical engineering Ph.D. program you will complete a number of classes in your first two years of study, including foundational courses with other engineering doctorate students, discipline-specific courses within biomedical and chemical engineering, and elective courses you select with your research advisor. You will complete a research thesis project with your faculty advisor in their lab and may have the opportunity to complete a complementary industrial co-op or internship. You will graduate from the program as a highly skilled researcher who is well positioned to be a leader in the next generation of engineers who will help tackle the challenging and complex problems facing our society.

Plan of Study

The curriculum for the biomedical and chemical engineering Ph.D. program provides the knowledge and skills to develop successful independent researchers.

Core Courses: Core courses, which are usually completed during the first two semesters of the program, serve as foundational preparation for elective courses. They develop your core competency skills for research, introduce the research landscape in biomedical and chemical engineering, and helping prepare you for the qualifying exam.

Discipline Concentration Elective Courses: The discipline concentration elective courses provide rigorous education in a field of research in biomedical and chemical engineering. Students may choose elective courses in consultation with the dissertation and research advisor, and from courses offered by the department of biomedical engineering and the department of chemical engineering.

Focus Area Elective Courses: Focus area elective courses provide the flexibility for you to engage in trans-disciplinary learning. In consultation with your dissertation and research advisor, you will select graduate level elective courses offered by any of the departments in the Kate Gleason College of Engineering. In addition, and subject to the program director’s approval, you may choose graduate courses offered by any of the RIT colleges.

Qualifying Exam: You will complete a qualifying exam at the end of your first year of study. The exam evaluates your aptitude, potential, and competency in conducting doctorate-level research. Through written documentation and a presentation of your work, you will critically review a recent peer-reviewed journal article in your field and propose a creative extension of the work.

Dissertation Proposal and Candidacy Exam: You will present and defend a dissertation proposal to your dissertation committee typically during your third year of study. The proposal provides the opportunity for you to elaborate on your research plans and to obtain feedback from your dissertation committee on the direction and approach of your research.

Research Review Meetings: Research review meetings provide comprehensive feedback regarding your dissertation research progress and expected outcomes prior to the defense of your full dissertation.

Dissertation Presentation and Defense: You will prepare an original, technically rigorous, and well-written dissertation that describes your research body of work and novel contributions that have resulted from your doctoral studies in biomedical and chemical engineering. You will present and defend your dissertation and its accompanying research to your dissertation committee.

Research Assistantships

Research assistantships are available to doctoral students. Learn more about the college’s research assistantship opportunities and how you can apply.

Experiential Learning

Internships

You may apply for internships in industry or at one of the national laboratories that align with your thesis research. Internships provide an opportunity for hands-on research experience, professional networking, and can serve to advance your thesis work. In addition, you may identify research opportunities at the National Labs Career Fair, an annual event hosted by RIT that brings representatives to campus from the United States’ federally-funded research and development labs.

Admission requirements

This program is available on-campus only.

Offered Full-time

Full-time Application Deadline: January 15 priority deadline. Closed for new applications for Fall 2023.

Full-time STEM Designated: Yes

Full-time study is 9+ semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.
Application Details

To be considered for admission to the Biomedical and Chemical Engineering program, candidates must fulfill the following requirements:

• Complete an online graduate application.
• Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
• Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
• A recommended minimum cumulative GPA of 3.0 (or equivalent).
• Submit a current resume or curriculum vitae.
• Submit a statement of purpose for research which will allow the Admissions Committee to learn the most about you as a prospective researcher.
• Submit two letters of recommendation.
• Entrance exam requirements: GRE optional but recommended. No minimum score requirement.
• Writing samples are optional.
• Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 94
- IELTS: 7.0
- PTE Academic: 66

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Ph.D. students typically receive full tuition and an RIT Graduate Assistantship that will consist of a research assistantship (stipend) or a teaching assistantship (salary).

Chemical Engineering, MS

www.rit.edu/study/chemical-engineering-ms

Brian Landi, Professor
585-475-4726, bjlsp5@rit.edu

Program overview

Chemical engineers apply the core scientific disciplines (chemistry, physics, biology, and mathematics) to transform raw materials or chemicals into more useful or valuable forms, invariably in processes that involve chemical change. In research and development, chemical engineers not only create new, more effective ways to manufacture chemicals, but also work collaboratively with chemists to pioneer the development of new high-tech materials for specialized applications. The development, commercialization, and optimization of the industrial-scale processes for manufacturing chemicals and advanced materials are feats of chemical engineering. Virtually every aspect of a modern industrial economy is critically dependent upon chemical engineering for manufacturing the vast array of bulk and specialty chemicals and high-tech materials needed to create a limitless array of value-added products.

Those with advanced knowledge in chemical engineering become leaders in industry, government, and higher education.

RIT’s Chemical Engineering Master’s Degree

In RIT’s chemical engineering MS you will take core chemical engineering courses in topics like advanced engineering mathematics, advanced thermodynamics, transport phenomena, and advanced reaction engineering. With this foundation in place, you are prepared to select focus area elective courses that provide a breadth of expertise across chemical engineering and develop your professional interests. You may personalize your chemical engineering master’s program with elective courses in chemical engineering, mechanical engineering, microelectronic engineering, microsystems engineering, imaging science, materials science and engineering, and mathematics. These areas give you an opportunity to customize your course work in a range of topics, such as:

• Battery engineering
• Renewable energy systems
• Nanotechnology and microsystems
• Quantum mechanics
• Polymer science
• Thermodynamics
• Applied mathematics

Total Semester Credit Hours 30

*Focus Area Electives: Courses that are directly relevant to providing a breadth of expertise across chemical engineering, by drawing upon graduate course work as appropriate from across the college of engineering or related fields with approval by the Graduate Program Director. It
is anticipated that students interested in engaging with faculty advisors for graduate research would enroll in graduate independent studies to achieve that experience. Graduate courses from a discipline outside of KGCOE would require approval from the Department Graduate Program Director.

**Computer Engineering, MS**

[www.rit.edu/study/computer-engineering-ms](http://www.rit.edu/study/computer-engineering-ms)

*Andres Kwasinski, Professor*

*585-475-5139, ak@mail.rit.edu*

**Program overview**

The computer engineering masters focuses on the design and development of computer and computer-integrated systems, with consideration to such engineering factors as function, performance, security, and sustainability. Computer engineers design and build these systems to meet application and system requirements with attention to the hardware-software interaction. The program emphasizes the careful adoption of design methodology and the application of sophisticated engineering tools. The intensive programming and laboratory work requirements ensure significant, high level, specialized knowledge and experience with modern facilities and state-of-the-art design tools.

**RIT’s Computer Engineering Master’s Degree**

The MS in computer engineering provides you with a high level of specialized knowledge in computer engineering. You’ll strengthen your ability to successfully formulate solutions to current technical problems while gaining significant independent learning experience that can prepare you for further graduate study or for continuing professional development at the leading edge of the field. The program accommodates applicants with undergraduate degrees in computer engineering or related programs such as electrical engineering or computer science. Some additional bridge courses may be required for applicants from undergraduate degrees outside of computer engineering.

The degree consists of a required course, flexible core courses, graduate electives, graduate seminar, and your choice of a thesis research or a graduate project.

**Flexible Core:** You will choose one course from each of the following core clusters, with your faculty advisor’s guidance.

- Computer Architecture and Digital Design
- Computing, Communications and Algorithms

**Graduate Electives:** With advisor and department approval, you may request to take graduate courses outside of the department. The graduate electives are selected among the available research tracks. You are encouraged to choose most of your graduate electives within a single track, by consulting with your advisor. You must take a minimum of two electives from the department of computer engineering.

**Thesis Research:** Thesis research is an independent investigation of a research problem that contributes to the state of the art. Students who pursue the thesis option seek to answer a fundamental science/engineering question that contributes new knowledge in the field. You are expected to formulate the problem under a faculty advisor’s guidance and conduct extensive quantitative or qualitative analyses with sound methodology. A thesis committee will guide your research activities. Your findings are expected to be repeatable and generalizable, with sufficient quality to make them publishable in technical conferences and/or journals. For detailed information on thesis research timeline and requirements, please refer to Computer Engineering Thesis Research.

**Graduate Project:** The graduate project is a scholarly undertaking that addresses a current technical problem with tangible outcomes. The project generally addresses an immediate and practical problem, a scholarly undertaking that can have tangible outcomes. Examples of typical projects include implementing, testing, and evaluating a software and/or
hardware system or conducting a comprehensive literature review with a comparative study. You are expected to give a presentation or demonstration of the final deliverables of your project. For detailed information on a graduate project timeline and requirements, please refer to Computer Engineering Graduate Project.

**Computer Engineering Research Tracks**

You are encouraged to choose most of your graduate electives within a single research track, by consulting with your advisor. You may take relevant courses from other academic programs, including electrical engineering, computer science, and software engineering, to support a specific research focus. The following research tracks are available:

- **Computer Architecture**–Computer architecture area deals with hardware resource management, instruction set architectures and their close connection with the underlying hardware, and the interconnection and communication of those hardware components. Some of the current computer architecture challenges that are being tackled in the computer engineering department include energy efficient architectures, high performance architectures, graphic processing units (GPUs), reconfigurable hardware, chip multiprocessors, and Networks-on-Chips.

- **Computer Vision and Machine Intelligence**–Visual information is ubiquitous and ever more important for applications such as robotics, health care, human–computer interaction, biometrics, surveillance, games, entertainment, transportation and commerce. Computer vision focuses on extracting information from image and video data for modeling, interpretation, detection, tracking and recognition. Machine Intelligence methods deal with human–machine interaction, artificial intelligence, agent reasoning, and robotics. Algorithm development for these areas spans image processing, pattern recognition and machine learning, and is intimately related to system design and hardware implementations.

- **Integrated Circuits and Systems**–Modern processors demand high computational density, small form factors, and low energy dissipation with extremely high performance demands. This is enabled by the nanoscale and heterogeneous integration of transistors and other emerging devices at the massive-scale. Such nanocomputers will open unimaginable opportunities as well as challenges to computer engineers. This research focuses designing computers with emerging novel technologies in the presence of severe physical constraints; investigating dynamic reconfigurability to exploit the power of nanoscale electronics for building reliable computing systems; and studying the applicability of emerging technologies to address challenges in computing hardware of the future.

- **Networks and Security**–The prevalence of interconnected computing, sensing and actuating devices have transformed our way of life. Ubiquitous access to data using/from these devices with reliable performance as well as security assurance presents exciting challenges for engineers and scientists. Resilient to environmental uncertainty, system failures and cyber attacks requires advances in hardware, software and networking techniques. This research track focuses on intelligent wireless and sensor networks, cryptographic engineering, and predictive cyber situation awareness.

- **Signal Processing, Control, and Embedded Systems**–This research area is concerned with algorithms and devices used at the core of system that interacts with our physical world. As such, this area considers the sensing, analysis and modeling of dynamic systems with the intent of measuring information about a system, communicating this information and processing it to adapt its behavior. Application areas are robust feedback-based control where uncertainty in the dynamics and environment must be considered during the design process and signal processing algorithms and devices for system sensing and adaptation.

**Cooperative Education**

What makes an RIT education exceptional? It’s the opportunity to complete relevant, hands-on engineering co-ops and internships with top companies in every single industry. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Cooperative education is optional but strongly encouraged for graduate students in the computer engineering master’s program.

First Year

* At least three graduate electives must come from the computer engineering department.
† Completing this option requires passing a comprehensive examination. Students identify a primary flexible core cluster and a secondary flexible core clusters. Students take all courses from the primary cluster and select one course from the secondary cluster.

Flexible Core Cluster I

Computer Architecture and Digital Design
CMPE-630 Digital Integrated Circuit Design
CMPE-660 Reconfigurable Computing
CMPE-755 High Performance Architectures

Flexible Core Cluster II

Computing, Communications, & Algorithms
CMPE-655 Multiple Processor Systems
CMPE-670 Data and Communication Networks
CMPE-677 Machine Intelligence

Total Semester Credit Hours

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Admission requirements

This program is available on-campus only.

Offered Full-time
- Full-time Admit Term(s): Fall or Spring
- Full-time Application Deadline: Rolling
- Full-time STEM Designated: Yes

Offered Part-time
- Part-time Admit Term(s): Fall or Spring
- Part-time Application Deadline: Rolling
- Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Computer Engineering program, candidates must fulfill the following requirements:
- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college in computer engineering or a related field.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: GRE required. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores
International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

TOEFL: 79
IELTS: 6.5
PTE Academic: 56
## Program overview

This is an exciting time in electrical and computer engineering. Harnessing electricity not only provides humanity with a transformative form of energy, but it also leads to the development of digital technologies, which have forged our Information Age as a time of revolutionary advances developed at an unprecedented pace.

The 21st century has witnessed such advances as the Smart Grid, ubiquitous fast internet access through wireless networks, artificial intelligence and machine learning technologies that rival humans in performance, the Internet-of-Things, cloud computing, fiber-optic networks capable of transmitting trillions of bits per second, new computing paradigms such as quantum or neuromorphic computing, and many more. None of these advances would have happened without the dedication of researchers in electrical and computer engineering.

Offered jointly by the department of electrical and microelectronic engineering and the department of computer engineering, students in RIT’s Ph.D. in electrical and computer engineering learn to become independent researchers by conducting research under the guidance of the world-class researchers that comprise our faculty. This research is often associated with some of the many centers and laboratories across RIT, including the Center for Human-aware AI (CHAI) and the Global Cybersecurity Institute.

The curriculum for the Ph.D. in electrical and computer engineering provides the knowledge and skills to form successful independent researchers by providing disciplinary and interdisciplinary courses, research mentorship, and seminars.

### Research Assistantships

Research assistantships are available to doctoral students. Learn more about the college’s research assistantship opportunities and how you can apply.

*Engineering Foundation Electives:

- EEEE-707 Engineering Analysis
- EEEE-709 Advanced Engineering Mathematics

† Discipline Concentration: Any graduate level course offered by the departments of Electrical and Microelectronic Engineering of Computer Engineering, exclusive of capstones.

‡ Focus Area Elective: Any graduate level course offered by the Kate Gleason College of Engineering, exclusive of capstones.

The curriculum for the Ph.D. in electrical and computer engineering provides the knowledge and skills to form successful independent researchers by providing disciplinary and interdisciplinary courses, research mentorship, and seminars. Courses are organized into three categories: core, discipline concentration elective, and focus area elective courses. In addition, the plan of study includes three major research-based milestones: the doctoral qualifying exam, the doctoral candidacy exam, and the doctoral dissertation defense.

### Core Courses

Core courses are usually completed during the first two semesters of the program since they serve as foundational preparation for other elective courses. Core courses develop core competency skills for research, introducing the research landscape in electrical and computer engineering, and helping to prepare students for the qualifying exam.

The discipline concentration elective courses provide rigorous education in a student’s specific field of research in electrical and computer engineering. Students choose courses in consultation with the dissertation and research advisor. Graduate courses offered by the department of electrical and microelectronic engineering (courses code EEEE-6/7/8xx) or the department of computer engineering (courses code CMPE-6/7/8xx).

Focus area elective courses provide the curriculum flexibility for students to engage in trans-disciplinary learning. In consultation with the dissertation and research advisor, students choose graduate courses offered by any department in the Kate Gleason College of Engineering. In addition, and subject to the approval of the Ph.D. program director, students may choose graduate courses offered by any RIT colleges.

Students complete a qualifying exam at the end of their first year of study. The exam evaluates the student’s aptitude, potential, and competency in conducting Ph.D.-level research.

Students must present a dissertation proposal to their dissertation committee no sooner than six months after the qualifying exam and at least twelve months prior to the dissertation defense exam. The proposal provides the opportunity for students to elaborate on their research plans and to obtain feedback on the direction and approach to their research from their dissertation committee.

### Discipline Concentration Elective Courses

Core courses are usually completed during the first two semesters of the program since they serve as foundational preparation for other elective courses. Core courses develop core competency skills for research, introducing the research landscape in electrical and computer engineering, and helping to prepare students for the qualifying exam.

The discipline concentration elective courses provide rigorous education in a student’s specific field of research in electrical and computer engineering. Students choose courses in consultation with the dissertation and research advisor. Graduate courses offered by the department of electrical and microelectronic engineering (courses code EEEE-6/7/8xx) or the department of computer engineering (courses code CMPE-6/7/8xx).

Focus area elective courses provide the curriculum flexibility for students to engage in trans-disciplinary learning. In consultation with the dissertation and research advisor, students choose graduate courses offered by any department in the Kate Gleason College of Engineering. In addition, and subject to the approval of the Ph.D. program director, students may choose graduate courses offered by any RIT colleges.

Students complete a qualifying exam at the end of their first year of study. The exam evaluates the student’s aptitude, potential, and competency in conducting Ph.D.-level research.

Students must present a dissertation proposal to their dissertation committee no sooner than six months after the qualifying exam and at least twelve months prior to the dissertation defense exam. The proposal provides the opportunity for students to elaborate on their research plans and to obtain feedback on the direction and approach to their research from their dissertation committee.

Each doctoral candidate prepares an original, technically rigorous, and well-written dissertation that describes the candidate’s research body of work and novel contributions to the discipline of electrical and computer engineering and that have resulted from the doctoral studies. In this culminating milestone, each doctoral candidate presents and defends their dissertation and its accompanying research to their dissertation committee.

### Focus Area Elective Courses

Core courses are usually completed during the first two semesters of the program since they serve as foundational preparation for other elective courses. Core courses develop core competency skills for research, introducing the research landscape in electrical and computer engineering, and helping to prepare students for the qualifying exam.

The discipline concentration elective courses provide rigorous education in a student’s specific field of research in electrical and computer engineering. Students choose courses in consultation with the dissertation and research advisor. Graduate courses offered by the department of electrical and microelectronic engineering (courses code EEEE-6/7/8xx) or the department of computer engineering (courses code CMPE-6/7/8xx).

Focus area elective courses provide the curriculum flexibility for students to engage in trans-disciplinary learning. In consultation with the dissertation and research advisor, students choose graduate courses offered by any department in the Kate Gleason College of Engineering. In addition, and subject to the approval of the Ph.D. program director, students may choose graduate courses offered by any RIT colleges.

Students complete a qualifying exam at the end of their first year of study. The exam evaluates the student’s aptitude, potential, and competency in conducting Ph.D.-level research.

Each doctoral candidate prepares an original, technically rigorous, and well-written dissertation that describes the candidate’s research body of work and novel contributions to the discipline of electrical and computer engineering and that have resulted from the doctoral studies. In this culminating milestone, each doctoral candidate presents and defends their dissertation and its accompanying research to their dissertation committee.
Students must present a dissertation proposal to their dissertation committee no sooner than six months after the qualifying exam and at least twelve months prior to the dissertation defense exam. Students must present a dissertation proposal to their dissertation committee no sooner than six months after the qualifying exam and at least twelve months prior to the dissertation defense exam. The proposal provides the opportunity for students to elaborate on their research plans and to obtain feedback on the direction and approach to their research from their dissertation committee.

Each doctoral candidate prepares an original, technically rigorous, and well-written dissertation that describes the candidate’s research body of work and novel contributions to the discipline of electrical and computer engineering that have resulted from the doctoral studies. In this culminating milestone, each doctoral candidate presents and defends their dissertation and its accompanying research to their dissertation committee.

Dissertation Presentation and Defense

Core courses are usually completed during the first two semesters of the program since they serve as foundational preparation for other elective courses. Core courses develop core competency skills for research, introducing the research landscape in electrical and computer engineering, and helping to prepare students for the qualifying exam.

The discipline concentration elective courses provide rigorous education in a student’s specific field of research in electrical and computer engineering. Students choose courses in consultation with the dissertation and research advisor. Graduate courses offered by the department of electrical and microelectronic engineering (courses code EEEE-6/7/8xx) or the department of computer engineering (courses code CMPE-6/7/8xx).

Focus area elective courses provide the curriculum flexibility for students to engage in trans-disciplinary learning. In consultation with the dissertation and research advisor, students choose graduate courses offered by any department in the Kate Gleason College of Engineering. In addition, and subject to the approval of the Ph.D. program director, students may choose graduate courses offered by any of RIT’s colleges.

Students complete a qualifying exam at the end of their first year of study. The exam evaluates the student’s aptitude, potential, and competency in conducting Ph.D.-level research.

Students must present a dissertation proposal to their dissertation committee no sooner than six months after the qualifying exam and at least twelve months prior to the dissertation defense exam. The proposal provides the opportunity for students to elaborate on their research plans and to obtain feedback on the direction and approach to their research from their dissertation committee.

Each doctoral candidate prepares an original, technically rigorous, and well-written dissertation that describes the candidate’s research body of work and novel contributions to the discipline of electrical and computer engineering that have resulted from the doctoral studies. In this culminating milestone, each doctoral candidate presents and defends their dissertation and its accompanying research to their dissertation committee.
Electrical Engineering, MS

www.rit.edu/study/electrical-engineering-ms
Jayanti Venkataraman, Professor
585-475-2143, jnvee@rit.edu

Program overview

In the electrical engineering master's degree you can customize a specialty of your choosing while working closely with electrical engineering faculty in a contemporary, applied research area. The program gives you the skills to solve industry and business challenges and deploy high-level solutions to problems affecting the world of engineering technology today. The degree also prepares you for advanced study in doctorate programs, including RIT’s microsystems engineering Ph.D. and electrical and computer engineering Ph.D.

RIT’s Electrical Engineering Master’s Degree

In the electrical engineering master's degree, you have the option of completing a thesis or graduate paper. For those who choose the graduate paper, an additional course is required. Students may also choose a course-only option with a comprehensive exam. All students are expected to attend two semesters of electrical engineering graduate seminar.

Focus Areas: You are required to choose among the following eight focus areas: communications, controls, digital systems, electromagnetics, integrated electronics, MEMs, robotics, or signal and image processing.

Graduate Paper/Thesis: In order to earn the MS in electrical engineering, you must complete a graduate paper or a graduate thesis.

Cooperative Education

What makes an RIT education exceptional? It’s the opportunity to complete relevant, hands-on engineering co-ops and internships with top companies in every single industry. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Cooperative education is optional but strongly encouraged for graduate students in the electrical engineering master’s program.

Admission requirements

This program is available on-campus only.

Offered Full-time
- Full-time Admit Term(s): Fall or Spring
- Full-time Application Deadline: Rolling
- Full-time STEM Designated: Yes

Offered Part-time
- Part-time Admit Term(s): Fall or Spring
- Part-time Application Deadline: Rolling
- Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Electrical Engineering program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college in engineering or a related field.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: GRE required. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

TOEFL: 79
IELTS: 6.5
PTE Academic: 56

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant's need for additional English language courses.
Engineering Management, ME

www.rit.edu/study/engineering-management-me
Katie McConky, Associate Professor
585-475-6062, Katie.McConky@rit.edu

Program overview

Engineers are problem solvers. They actively seek out problems in order to design and develop solutions that lead to innovative products, improvements to people’s lives, and solutions that better the world. But engineers don’t always speak that same language as business leaders. That’s when an engineering management master’s degree can make a profound difference.

RIT’s Engineering Management Master’s Degree

The engineering management master’s degree combines technical expertise with managerial skills to focus on the management of engineering and technological business challenges. You will learn the technology involved in engineering projects and the business processes through which technology is applied. The objective is to provide you with a solid foundation in organizational behavior, finance, and accounting, the areas commonly needed by managers who oversee engineers and engineering projects.

A Collaborative Master’s of Management for Engineers

The engineering management master’s degree is a blend of courses from the department of industrial and systems engineering in RIT’s Kate Gleason College of Engineering and Saunders College of Business. This creates a hybrid curriculum combining technological expertise with managerial skills.

Students in the engineering management program often take advantage of cooperative education opportunities. Cooperative education is optional but strongly encouraged for graduate students in the engineering management master’s program. Co-op is hands-on, paid career experience where you can experience in industry before you graduate. Students’ co-op experiences enrich classroom discussions, and set our students apart in the job market.

Experiential Learning

Cooperative Education and Internships

What makes an RIT education exceptional? It’s the opportunity to complete relevant, hands-on engineering co-ops and internships with top companies in every single industry. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

*Katie McConky, Associate Professor*

*585-475-6062, Katie.McConky@rit.edu*

**Program overview**

The master of science in engineering management uses a blend of industrial and systems engineering courses, and courses from Saunders College of Business, to focus on management of engineering and technological business challenges. It combines technological expertise with managerial skills.

**RIT’s Engineering Management Master’s Degree**

Engineering management is concerned with understanding the technology involved in an engineering project and the management process through which the technology is applied. This engineering management master’s degree deals with the dual role of the engineering manager, both as a technologist and a manager. The program provides a background in areas commonly needed in this role, such as organizational behavior, finance, and accounting, decision making under uncertainty, and the engineering product development value chain. Students may choose one of three focus areas: supply chain, production systems, or sustainability.

Industrial and Systems Engineering, MS

www.rit.edu/study/industrial-and-systems-engineering-ms
Katie McConky, Associate Professor
585-475-6062, Katie.McConky@rit.edu

Program overview

Industrial engineering is a multi-disciplinary engineering field at the intersection of mathematics, computer science, and business. The program teaches you how to design the systems behind products and services that affect our everyday lives.

The industrial engineering master's offers you hands-on experiences designing, improving, and controlling complex systems to make them more profitable, practical, controllable, and flexible. As a result, you will become a problem-solver through a flexible program that leverages skills in advanced manufacturing processes, operations research, data analytics, human computer interaction and augmented reality, product development, ergonomics and human factors, health care, logistics and supply chain management, and sustainable design and development.

You also will have the opportunity to explore different domain areas while working closely with faculty doing research on contemporary problems. We encourage all of our students to participate in cooperative education, which enables you to apply your skills in the real world before you graduate, and helps to enhance your classroom learning once you return from co-op.

What is an Industrial Engineer?

An industrial engineer uses their knowledge of manufacturing and production systems, work efficiencies, energy, and natural resources and materials to develop, improve, and optimize integrated systems to become more efficient and sustainable. An industrial engineer improves how an organization integrates work processes, manufactures products, or provides services while also taking into account ergonomic analysis, logistics and supply chain management, and sustainable design and development with an overall systems approach.

RIT’s Master’s in Industrial Engineering

Our industrial engineering master’s degree allows you to customize your course work while working closely with industrial and systems engineering faculty in a contemporary, applied research area. Faculty members are currently conducting applied project and research work in the areas of contemporary and advanced manufacturing processes/systems, ergonomic/biomedical analysis, human computer interaction and augmented reality, logistics and supply chain management, health systems, energy systems, sustainable design and development, systems engineering/product development, and systems simulation.

www.rit.edu/study/lean-six-sigma-adv-cert
Rebecca Ziebarth,
585-475-2033, razeqa@rit.edu

Program overview

Lean Six Sigma is a methodology for increasing organizational productivity and efficiency through a structured problem solving process called DMAIC (define, measure, analyze, improve, and control). The focus is on improving organizational systems and work processes.

Lean Six Sigma Certification: On-Campus or Online

The advanced certificate in Lean Six Sigma is for engineers, process-improvement facilitators, and other practitioners looking to increase their effectiveness or enhance their qualifications to broaden their careers. Lean Six Sigma has many benefits for organizations, among them:

- Reduction of new product development time
- Reduction of product delivery time
- Reduction of waste and costs
- Reduction of work-in-process inventory
- Reduction of product variability
- Increased profits
- Increased customer satisfaction, retention and loyalty

The focus of the courses in this certificate is on quality control situations in engineering and on driving process improvements in a broad range of business environments and industries to achieve the benefits outlined above. The certificate's courses may be completed on-campus or online.

Lean Six Sigma Training

Industry certifications such as Lean Six Sigma green belt and black belt are not the focus of this certificate program, however, students interested in obtaining these credentials are well prepared to do so after the deep topical coverage offered in this advanced certificate program. RIT’s Center for Quality and Applied Statistics offers three levels of certification for Lean Six Sigma practitioners: Yellow Belt, Green Belt, and Black Belt. Learn more about RIT’s offerings in Lean Six Sigma, including training schedules, examples of projects, and more.

What is a Graduate Certificate?

A graduate certificate, also called an advanced certificate, is a selection of up to five graduate level courses in a particular area of study. It can serve as a stand-alone credential that provides expertise in a specific topic that enhances your professional knowledge base, or it can serve as the entry point to a master's degree. Some students complete an advanced certificate and apply those credit hours later toward a master's degree.

Certain countries and individuals are subject to comprehensive embargoes under US Export Controls, which prohibit virtually ALL exports, imports and other transactions without a license or other US Government authorization. Individuals applying for online study who are subject to these embargoes will be notified during the application process.

Admission requirements

This program is available on-campus or online.

On Campus

Offered Part-time
Part-time Admit Term(s): Fall, Spring, or Summer
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Online

Offered Part-time
Part-time Admit Term(s): Fall, Spring, or Summer
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Part-time study is 1-8 semester credit hours. RIT will not issue a student visa for advanced certificates.
Application Details
To be considered for admission to the Lean Six Sigma program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit 1 letter of recommendation.
- Entrance exam requirements: None
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores
International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test waiver.

- TOEFL: 79
- IELTS: 6.5
- PTE Academic: 56

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid
An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Prerequisites
Applicants must have college-level credit or practical experience in statistics (at least one course in probability and statistics).

Online Degree Information
The online Lean Six Sigma Advanced Certificate can only be completed part-time, taking one or two courses per term. The average time to completion is one year. Delivery is a blend of asynchronous and synchronous study, and academic advisors work with students to select courses that meet degree requirements and student schedules. Students typically spend 10-12 hours per week per class, depending on the content and their background knowledge. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

Online Tuition Eligibility

The online Lean Six Sigma Adv. Cert. is a designated online degree program that is billed at a 43% discount from our on-campus rate. View the current online tuition rate.

Manufacturing Leadership, MS

www.rit.edu/study/manufacturing-leadership-ms
Mark Smith, 585-475-7102, Mark.Smith@rit.edu

Program overview
The master of science in manufacturing leadership is for experienced engineers and other professionals who aspire to high-level positions in operations, supply chain management, and process improvement. The program integrates business and engineering management courses, delivering them online or on-campus where students continue to work while taking classes.

Manufacturing leadership is a focused program developed jointly by the Kate Gleason College of Engineering and Saunders College of Business. Particular emphasis is placed on supply chain management, global manufacturing and operations, lean systems thinking, leadership, and decision making. A capstone project, oriented to the solution of an operations or service management problem or process improvement initiative, enables students to apply new skills and capabilities to the solution of a pressing real-world problem, with significant financial benefit to sponsors. The program can also be taken on a full-time basis, with several courses available on campus. Students may start any term (fall, spring, summer) and complete courses at their own pace.

Sponsorship
Most students are sponsored by an employer, who is committed to improving leadership capabilities in operational excellence. Sponsorship includes financial support and a commitment to work with the student to provide clear expectations and a well-articulated career development plan that builds upon the program. Candidates are welcome to sponsor themselves. Students should contact Financial Aid and Scholarship for more information.

Related Programs
Visit the Engineering Leadership department for information on related offerings, including the master of science in product development, graduate certificate programs, and non-credit workshops and training programs. Programs are available online, on-campus, or onsite at your location. Contact us for information about partnerships and customized programs for your organization.

Curriculum

Educational Objective
To prepare graduates to lead teams and organizations within a manufacturing or service enterprise for successful competition in a complex global economy, through the integration of business and technical skills.

Key Capabilities of Graduates

- Ability to make sound business decisions in a complex global economy: business planning with full understanding of outsourcing and offshoring; financial management and total/life-cycle cost; agile decision-making.
- Ability to manage the global supply chain: supply chain strategy development and execution; logistics management (quality and delivery
assurance); systems needs for supply chain management; and supply chain optimization.

- Ability to manage global, multi-site production and operations: managing distributed teams; process technology transfer to domestic and international locations; service operations; enterprise and manufacturing strategies; lean operations; location strategy and facility design; state-of-the-art tools; regulatory issues and established norms.
- Comprehensive understanding of quality and continuous improvement principles, with application to the manufacturing and operations management.
- Strong leadership and management skills applied to global high technology manufacturing: systems thinking, planning, and management; applications (“hands-on”) orientation; project management expertise (planning, relationship management, control, risk management and decision-making); creative leadership to drive innovative solutions; enhanced ability to recognize barriers to success early, when corrective actions are least costly.

### Elective courses

An elective course offers students the opportunity to better meet personal and organizational needs. Students may select from a long list of courses. Recommended electives include such offerings as Decision and Risk Benefit Analysis, Advanced or International Project Management, Breakthrough Thinking and Creativity, Customer Centricity, and others.

### Capstone project

Students complete a project during the final academic year of the program, based on a real problem often identified in the companies where they work. The corporate-oriented capstone project is directed at the solution of a manufacturing or services management problem or process improvement initiative. It enables students to broaden the educational experience and demonstrate the knowledge and skills essential to business leadership. The project provides immediate benefits to sponsoring organizations and is an excellent opportunity for students to gain visibility and recognition. Projects often result in substantial cost savings or improved efficiencies. View our list of capstone projects for examples of projects past students have completed as part of the program.

### Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.
Additional Information

Prerequisites
Applicants must have at least two years of experience in a manufacturing-related organization or business environment.

Online Degree Information
The Manufacturing Leadership MS program is designed to be completed part-time (1 or 2 courses per term). Full-time options may be available with Graduate Program Director’s approval. Time to completion will depend on the plan of study when courses are offered, selected electives, and if the student takes a summer course. Courses may be synchronous or asynchronous. Academic advisors work with students on a study plan after admission to ensure classes fit student availability. Typically students finish this degree in 24-36 months. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

Online Tuition Eligibility
The online Manufacturing Leadership MS is considered a professional degree that is billed at the standard (on campus) RIT graduate tuition rate. It is not billed at the designated online tuition rate. Scholarship is available off the standard tuition rate for this online program. View the current Graduate tuition rate.

Materials Science and Engineering, MS

www.rit.edu/study/materials-science-and-engineering-ms
Scott Williams, Professor
585-475-3033, sawppr@rit.edu

Program overview
In the materials science master’s degree you’ll receive a serious interdisciplinary learning experience in materials studies, crossing over the traditional boundaries of such classical disciplines like chemistry, physics, and engineering.

The objectives of the materials science degree are threefold:
• With the advent of new classes of materials and instruments, the traditional practice of empiricism in the search for and selection of materials is rapidly becoming obsolete. Therefore, the program offers a serious interdisciplinary learning experience in materials studies, crossing over the traditional boundaries of such classical disciplines like chemistry, physics, and electrical, mechanical, and microelectronic engineering.
• The program provides extensive experimental courses in diverse areas of materials-related studies.
• The program explores avenues for introducing greater harmony between industrial expansion and academic training.

RIT’s Materials Science Master’s Degree
Our materials science master’s degree spans across three colleges: Science, Engineering and Sustainability. This gives you broad access that is not found in other programs that might be in a single college. In addition, the applied nature of the research and our co-op connections are unrivaled.

• Take part in extensive experimental courses in diverse areas of materials-related studies.
• Explore avenues for introducing greater harmony between industrial expansion and academic training.
• Gain the independent thinking and project management skills to grow professionally and prepare yourself for a wide range of careers.

Materials Science and Engineering Master’s Courses
The materials science degree includes three required core courses, graduate electives, and either a thesis or project.

Courses: The core courses are specially designed to establish a common base of materials-oriented knowledge for students with baccalaureate degrees in chemistry, chemical engineering, electrical engineering, mechanical engineering, physics, and related disciplines.

There also is an emphasis on experimental techniques, with one required experimental course as part of the curriculum. This aspect of the masters in materials science will enhance your confidence when dealing with materials-related problems.

Electives: Elective courses may be selected from advanced courses offered by the School of Chemistry and Materials Science or, upon approval, from courses offered by other RIT graduate programs. Elective courses are scheduled on a periodic basis. Transfer credit may be awarded based on academic background beyond the bachelor’s degree or by examination, based on experience.

Thesis/Project: Choose to complete a thesis or a project as the conclusion to your program. If you pursue the thesis option, you will take four graduate electives, complete nine credit hours of research, and produce a thesis paper. Alternatively, the project option includes six graduate electives and a 3 credit hour project.
Part-Time Study: The materials science degree offers courses in the late afternoon and evenings to encourage practicing scientists and engineers to pursue the program without interrupting their employment. (This may not apply to courses offered off campus at selected industrial sites.) Students employed full time are normally limited to a maximum of two courses, or 6 credit hours, each semester. If you wish to register for more than 6 credit hours, then you must obtain the permission of your advisor.

Cooperative Education and Internships

What makes an RIT science and math education exceptional? It’s the ability to complete science and math co-ops and gain real-world experience that sets you apart. Co-ops in the College of Science include cooperative education and internship experiences in industry and health care settings, as well as research in an academic, industry, or national lab. These are not only possible at RIT, but are passionately encouraged.

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Co-ops and internships are encouraged for graduate students in the materials science degree.

National Labs Career Events and Recruiting

The Office of Career Services and Cooperative Education offers National Labs and federally-funded Research Centers from all research areas and sponsoring agencies a variety of options to connect with and recruit students. Students connect with employer partners to gather information on their laboratories and explore co-op, internship, research, and full-time opportunities. These national labs focus on scientific discovery, clean energy development, national security, technology advancements, and more. Recruiting events include our university-wide Fall Career Fair, on-campus and virtual interviews, information sessions, 1:1 networking with lab representatives, and a National Labs Resume Book available to all labs.

**Cost and Financial Aid**

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

**Program overview**

The mechanical and industrial engineering doctorate program produces graduates with a depth of knowledge in mechanical or industrial engineering while allowing students to engage in cutting-edge, cross-disciplinary research. The flexible curriculum encourages students to gain domain-specific knowledge from courses offered throughout the college's portfolio of engineering programs. The curriculum, coupled with the depth of knowledge in mechanical or industrial engineering disciplines, creates graduates who are ready to tackle the world's most pressing societal and industrial challenges. The program develops world-class researchers who can capitalize on the most promising discoveries and innovations to develop interdisciplinary solutions for real-world challenges.

The mechanical and industrial Ph.D. requires students to address fundamental technical problems of national and global importance for the 21st century. The program finds its roots in tackling global problems in energy, transportation, health care, communications, and manufacturing. The mechanical and industrial engineering departments offer a broad range of technological research strengths including additive and advanced manufacturing, nanotechnology, robotics and mechatronics, heat transfer and thermo-fluids, simulation, modeling and optimization, ergonomics, biomimetic systems, wearable sensors, health care data analytics, prognostics and fault detection, and energy systems. Students collaborate with faculty advisors to build on these technological strengths to solve problems of global significance in order to prepare them, and for careers in both industry and academia.

Program overview

The mechanical engineering masters produces graduates who are leaders in their respective fields who are ready to tackle high-level problems as practicing professionals. Designed for students who desire advanced training in specific areas of mechanical engineering, the master of science acts as a prelude to a career in either research or industry. Students can choose to focus on a variety of disciplines including dynamics, robotics, nanotechnology, biomechanics, energy systems, or more.

RIT’s Mechanical Engineering Master’s Degree

The mechanical engineering MS prepare students to:

• practice mechanical engineering in support of the design of engineered systems through the application of the fundamental knowledge, skills, and tools of mechanical engineering.
• enhance their skills through formal education and training, independent inquiry, and professional development.
• work independently as well as collaboratively with others, while demonstrating the professional and ethical responsibilities of the engineering profession.
• successfully pursue graduate degrees at the doctoral levels, should they choose.

Mechanical Engineering Courses

The program includes core courses, focus area courses, elective courses, and a thesis. All full-time and full-time equivalent students are required to attend the weekly graduate seminar each semester they are on campus.

Focus Area Courses: Students develop a focus area of study in mechanical engineering related to their technical and professional development interests and goals. Examples of focus areas include automotive systems, business, controls, manufacturing, mechanics-design/materials, product development, sustainability, thermo/fluid engineering, and vibrations engineering.

Independent Study: Students may earn a limited number of credit hours through independent study with guidance from a member of the graduate faculty. Areas for independent study include selected topics in applied mathematics, analytical mechanics, nonlinear mechanics, fracture mechanics, heat transfer, fluid mechanics, thermodynamics, control systems, optimal control, thermal stresses, composite materials, and biomechanics.

Thesis: Prior to completing course work in the mechanical engineering MS degree, students prepare and present a formal thesis proposal to their faculty advisor. An acceptable proposal (which includes a statement of work, extensive literature search, and proposed timeline), signed by the student and approved by their faculty advisor and department head, is required prior to registering for thesis credits. Students form a graduate thesis committee in coordination with their advisor and present their proposal to their committee for review and approval during the first semester in which they have registered for thesis credit. Students are required to deliver a successful written and oral presentation of their thesis.

Cooperative Education and Internships

What makes an RIT education exceptional? It’s the opportunity to complete relevant, hands-on engineering co-ops and internships with top companies in every single industry. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Cooperative education is strongly encouraged for graduate students in the mechanical engineering master’s program.

Admission requirements

This program is available on-campus only.

Offered Full-time

Full-time Admit Term(s): Fall or Spring
Full-time Application Deadline: Rolling
Full-time STEM Designated: Yes
Offered Part-time

Part-time Admit Term(s): Fall or Spring
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Mechanical Engineering program, candidates must fulfill the following requirements:

• Complete an online graduate application.
• Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
• Hold a baccalaureate degree (or US equivalent) from an accredited university or college in mechanical engineering, physics, or a related field.
• A recommended minimum cumulative GPA of 3.0 (or equivalent).
• Submit a current resume or curriculum vitae.
• Submit a personal statement of educational objectives.
• Submit two letters of recommendation.
• Entrance exam requirements: GRE required (waived for Fall 2023). No minimum score requirement.
• Writing samples are optional.
• Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

TOEFL: 79
International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant's need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Microelectronic Engineering, MS

www.rit.edu/study/microelectronic-engineering-ms
Karl Hirschman, Professor
585-475-5130, kdhemc@rit.edu

Program overview

Integrated microelectronic or nanoelectronic circuits and sensors drive our global economy, increase our productivity, and help improve our quality of life. Semiconductor and photonic devices impact virtually every aspect of human life, from communication, entertainment, and transportation to health, solid state lighting, and solar cells. RIT’s microelectronic engineering program is considered a world leader in the education of semiconductor process engineers.

The program is offered both on campus and online.

RIT: A World Leader in the Education of Semiconductor Process Engineers

Microelectronic engineering focuses on the study, design, and fabrication of very small electronic devices and components (micrometer scale or below). These are semiconductor and photonic devices that impact virtually every aspect of human life, from communication, entertainment, and transportation, to health, solid-state lighting, and solar cells. There is an ever-increasing need for talented engineers that not only understand the design of these devices but can direct and optimize their fabrication.

Integrated nanoelectronic and microelectronic circuits and sensors drive our global economy, increase our productivity, and help improve our quality of life.

RIT’s microelectronic students are powering the future. The university’s connection to the semiconductor industry was established 40 years ago when it launched the first microelectronic engineering degree program in the country. Since then, RIT has graduated more than 1,500 engineers trained to make semiconductor devices.

RIT’s Microelectronic Engineering Degree

The microelectronic engineering master’s provides a unique combination of physics, chemistry, and engineering in a state-of-the-art facility to prepare you for the real world. With internationally renowned professors with years of experience, courses are grounded in reality, with practical skill and advanced theory combined to produce comprehensive learning.

In the our microelectronic engineering master’s, you’ll:

- Understand the fundamental scientific principles governing solid-state devices and their incorporation into modern integrated circuits.
- Understand the relevance of a process or device, either proposed or existing, to current manufacturing practices.
- Develop in-depth knowledge in existing or emerging areas of the field of microelectronics such as device engineering, circuit design, lithography, materials and processes, yield, and manufacturing.
- Apply microelectronic processing techniques to the creation/investigation of new process/device structures.
- Communicate technical material effectively through oral presentations, written reports, and publications.

The microelectronic engineering master’s degree provides an opportunity for you to perform graduate-level research as you prepare for entry into either the semiconductor industry or a doctoral program. The on campus program consists of core courses, graduate electives, graduate seminar, and a research project or thesis. Students in the online version of the program complete all of the same requirements, with the exception of the graduate seminar. The degree requires strong preparation in the area of microelectronics and requires a research project or a thesis, which is undertaken once you have completed approximately 20 semester credit hours of study. Planning for both, however, should begin as early as possible. Generally, full-time students should complete their degree requirements, including thesis defense, within two years (four academic semesters and one summer term).

Cooperative Education and Internships

What makes an RIT education exceptional? It’s the opportunity to complete relevant, hands-on engineering co-ops and internships with top companies in every single industry. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Cooperative education is strongly encouraged for graduate students in the MS in microelectronic engineering.

Additional Information

Bridge Courses
Applicants applying with a bachelor’s degree in fields outside of electrical and microelectronic engineering may be considered for admission; however, bridge courses may be required to ensure the student is adequately prepared for graduate study.

Online Degree Information
The Microelectronic Engineering MS program is designed to be completed part-time (1 or 2 courses per term). Time to completion depends on the plan of study, when courses are offered, selected electives, and
Microsystems Engineering, Ph.D.

www.rit.edu/study/microsystems-engineering-phd
Stefan Preble, Professor
585-475-2625, sfpeen@rit.edu

Program overview

The multidisciplinary doctorate degree in microsystems engineering builds on the fundamentals of traditional engineering and science combined with curriculum and research activities addressing the numerous technical challenges of micro- and nano-systems. These include the manipulation of electrical, photonic, optical, mechanical, chemical, and biological functionality to process, sense, and interface with the world at a nanometer scale. This nanotechnology Ph.D. program provides a foundation to explore future technology through research in nano-engineering, design methods, and technologies and their integration into micro- and nano-scaled systems.

The microsystems engineering doctorate includes the following areas of exploration:

- Next-generation nanoelectronics include: development of new techniques, processes, and architectures for nano-electronic and nano-optoelectronic devices exploration into new materials research including thin-film electronics, III-V materials, 2D materials, carbon nanotubes, and spintronics. Scaled micro- and nano-electronics for integration into biomedical systems
- Photonics and Optoelectronics Research including: Photonic Integrated Circuits for computing, communications, and sensing. Light emitters (Lasers, LEDs/micro-LEDs) Research in biosensing, imaging and detection. Quantum optics and photonics
- Photovoltaic research in compound semiconductors (III-V), and organic solar cells
- Neuromorphic devices and circuits for machine learning, and the use of artificial intelligence to design nanomaterials and microsystems
- Nanomaterials research including nanoparticles, nanowires, nanotubes, quantum dots, self-assembly materials, and their applications in electronics, optics, and materials science
- MEMS (micro-electro-mechanical systems), MEOMS (micro-electro-optical-mechanical systems), and NEMS (nano-electro-mechanical systems) device, processing, and materials research for smart sensors, actuators, biochips, and micro-implantable appliances
- Microfluidics research on the behavior, control, and manipulation of fluids at the micro-scale

Mission

The program fulfills a critical need for an expanded knowledge base and expertise in the innovation, design, fabrication, and application of micro- and nano-scale materials, processes, devices, components, and systems. RIT is an internationally recognized leader in education and research in the fields of microsystems and nanoscale engineering.

The curriculum is structured to provide a sound background and a thorough foundation in engineering and science through world-class education in the innovative application of educational technologies and research experiences.

Plan of Study

A combination of graduate course work and research is required for completion of the program. The course work requires a combination of foundation courses, major and minor technical area courses, and electives. The student must pass the qualifying exam, the candidacy exam, and the dissertation defense exam to complete the degree requirements.

Phase 1–Qualifying: The first phase prepares students with the foundation in science and engineering required for the program as well as to determine the student’s ability to do independent research. This includes the foundation and specialization courses taken during the first year together with the successful completion of the qualifying exam. The qualifying exam tests the student’s ability to think and learn independently, to critically evaluate current research work in microsystems engineering, and to use good judgment and creativity to determine appropriate directions for future research work.

Phase 2–Candidacy: The second phase continues students’ course work and preliminary dissertation research. Much of this course work supports the dissertation research to be conducted in the third phase. This phase is completed when the student has finished most of the formal course work as prescribed in the program of study, has prepared the dissertation proposal, and has passed the candidacy examination.

Phase 3–Defense: The third phase includes the completion of the experimental and/or theoretical work needed to complete the student’s dissertation along with the required publication of results. The research review milestone is held as a meeting during this phase, as is the defense of the dissertation, which consists of a public oral presentation and examination.

The course work requirements are divided into four parts to ensure that students complete a well-rounded program of study with the necessary concentration in their specialized field.

Foundation courses

Four foundation courses and the Microsystems Ph.D. Seminar (MCSE-795) are mandatory for all students. Foundation courses consist of Microelectronic Fabrication (MCEE-601), Introduction to Nanotechnology and Microsystems (MCSE-702), Material Science for Microsystems Engineering (MCSE-703), and Theoretical Methods in Materials Science and Engineering (MTSE-704).

Major technical interest area

Students complete a sequence of three courses in the major technical research area and a sequence of two courses in a support area.

Minor technical interest areas

Students complete a two-course sequence in a minor technical area which should be outside of the student’s undergraduate degree major.

Elective courses

Students complete at least two elective courses, in addition to the foundation and technical interest courses.

General course requirements

The total number of credit hours required for the degree depends upon the highest degree level completed by the student before entering the program. Students entering without prior graduate work must complete a minimum of 39 credit hours of course work as outlined above. A minimum of 18 research credits and a total of 66 total credits are required. Credits beyond the minimum of 39 course and 18 research requirements can be taken from either category to reach the 66 credit total.

Students entering the program with a master’s degree may be permitted up to 24 course credit hours toward those required for the degree, based on the approval of the program director.

All students are required to maintain a cumulative grade-point average of 3.0 (on a 4.0 scale) to remain in good standing in the program.

Preparing a program of study

Students should prepare a program of study after passing the qualifying exam and no later than the spring semester of the second year. The program of study should be reviewed periodically by the student and the advisor, and modifications should be made as necessary. Leading up to

Admission requirements

This program is available on-campus only.

Full-time Admit Term(s): Fall
Full-time Application Deadline: January 15 priority deadline, rolling thereafter
Full-time STEM Designated: Yes

Full-time study is 9+ semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Microsystems Engineering program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college in the physical sciences or engineering.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a statement of purpose for research which will allow the Admissions Committee to learn the most about you as a prospective researcher.
- Submit two letters of recommendation.
- Entrance exam requirements: GRE optional but recommended. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 94
- IELTS: 7.0
- PTE Academic: 66

Advising

Doctoral students’ work is overseen by an advisor, the advisory committee, and the program’s director.

Candidacy examination

The candidacy examination is an oral examination based on the dissertation research proposal and allows the advising committee to judge the student’s ability to execute a research task and to communicate the results. The exam also serves to evaluate the proposed topic to ensure that if completed as posed it constitutes an original contribution to knowledge.

Research review milestone

The research review milestone is administered by the student’s advisor and the advisory committee between the time the student passes the candidacy exam and registers for the dissertation defense. This normally occurs approximately six months prior to the Dissertation Defense.

Dissertation defense and examination

The culmination of a student’s work toward the doctorate degree is the publication of their research. In addition to developing experimental and technical skills during the creation of research, a student needs to acquire the necessary literacy skills to communicate results to others. The preparation of the proposal and the dissertation manuscripts will demonstrate these skills. It is also expected that these skills are developed through the publication of technical papers and communications. The dissertation defense and examination is scheduled after all course requirements for the degree have been successfully completed.

Additional details regarding program requirements can be found in the Microsystems Engineering Ph.D. Graduate Student Manual.

Student Resources

The Microsystems Engineering Ph.D. offers a variety of resources for our students that range from academic support to handbooks and more. View our student resources for more information.

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant's need for additional English language courses.

Cost and Financial Aid
An RIT graduate degree is an investment with lifelong returns. Ph.D. students typically receive full tuition and an RIT Graduate Assistantship that will consist of a research assistantship (stipend) or a teaching assistantship (salary).

Additional Information

Foundation Courses
Taken in your first year of study, four foundation courses and the Microsystems Ph.D. Seminar (MCSE-795) are mandatory for all students. Foundation courses consist of Microelectronic Fabrication (MCEE-601), Introduction to Nanotechnology and Microsystems (MCSE-702), Material Science for Microsystems Engineering (MCSE-703), and Theoretical Methods in Materials Science and Engineering (MTSE-704).

Product Development, MS

www.rit.edu/study/product-development-ms
Mark Smith,
585-475-7102, Mark.Smith@rit.edu

Program overview
The master of science in product development is a leadership program for experienced engineers and technical specialists who aspire to high-level positions associated with product innovation. The program integrates business and engineering management courses, delivering them online or on-campus where students continue to work while taking classes.

New products and services are the lifeblood of today's high technology firms, and companies need more technically grounded leaders to drive the engine for business growth. The product development master's degree integrates business and engineering courses consistent with cross-functional, end-to-end product development and the systems perspective critical to conceive, create, launch, and support today's complex product portfolios. Participants acquire the foundation skills and strategic perspective necessary to become future leaders and senior managers responsible for driving business growth through new products and services.

In short, the product development program prepares today's technical experts as project leaders and technically grounded senior managers of their enterprises.

To stay on the cutting edge, the program was designed by academic and industry leaders to integrate formal education with state-of-the-art research and best practices from industry. It includes a year-long capstone project that generates significant return-on-investment to sponsoring organizations. Electives and the capstone project provide flexibility to tailor the program's content to specific learning objectives of students and sponsoring organizations. The program is offered fully online or as a blend of online and on-campus courses. Students may start any term (fall, spring, summer) and complete courses at their own pace.

Sponsorship
Most students are sponsored by an employer who is committed to improving leadership capabilities in product development. Sponsorship includes financial support and a commitment to work with the student to provide clear expectations and a well-articulated career development plan that builds upon the program. Candidates are welcome to sponsor themselves. Students should contact Financial Aid and Scholarship for more information.

Educational Objective
To develop a leadership perspective and knowledge base of the total life cycle product development system, integrating management and (systems) engineering elements. To establish the foundation for the systems approach needed to conceive, create, launch, and support products and platforms. The program considers new product development in a larger framework: how a company's business strategy, vision, and core capabilities coupled with the voice of the customer combine to determine product strategy and create best-in-class product portfolios.

Key Capabilities of Graduates
- Leadership expertise of the product development process and of high-performing product development teams and organizations.
- Improved leadership through structured systems thinking, design, and management.
- A strategic, enterprise-wide and global perspective.
- An innovative mindset receptive to changing markets, new technologies, and new opportunities.
- Decision making in uncertain and fast-paced environments.
- A market-oriented product development focus – i.e. the ability to transform customer problems, needs, and market opportunities into successful product portfolios.
- Economic analysis and the application of sound business principles to effective management in the product development domain.
- Project management: business and technical planning, relationship management and outsourcing, program control, structured decision making and risk management.
- Enhanced ability to recognize barriers to success early, when corrective actions are less costly.
- In-depth understanding and application of state-of-the-art tools for design, analysis, and management in the product development domain.

**Embedded Engineering Competencies**

The product development leader must apply engineering competencies to the development of strategic product architectures that relate to the business value chain of the corporation, to the integration of enabling technologies, and to the creation of realizable design concepts. These capabilities are supported by the abilities to:

- Assess the merits and risks associated with emerging technologies.
- Create products with acceptable product liability, life cycle cost, and environmental impact.
- Create products consistent with manufacturing and supply chain capabilities.
- Coordinate the product architecture with organizational structure.
- Select which competencies are core to the business and which can be outsourced.
- Create and implement an organization's decision processes.
- Identify and implement enabling technologies and tools.

**Total Semester Credit Hours**: 30

**Elective Courses**

An elective course offers students the opportunity to better meet personal and organizational needs. Students may select from a long list of courses. Recommended electives include such offerings as Managing Research and Innovation, Lean Six Sigma Fundamentals, Advanced or International Project Management, Breakthrough Thinking and Creativity, Customer Centricity, and others.

**Capstone Project**

Students complete a project during the final academic year of the program, based on a real problem often identified in the companies where they work. The corporate-oriented capstone project encompasses the broad integrative aspects of new product development – it synthesizes, increases, and demonstrates the student’s understanding of previous program material and underscores the behaviors essential to product development leadership. The capstone project generates immediate benefits to sponsoring organizations. View our list of capstone projects for examples of projects past students have completed as part of the program.

**Related Programs**

Visit the Engineering Leadership department for information on related offerings, including the master of science in manufacturing leadership, graduate certificate programs, and non-credit workshops and training programs.

Programs are available online, on-campus, or onsite at your location. Contact us for information about partnerships and customized programs for your organization.

  - Part-time Admit Term(s): Fall or Spring
  - Part-time Application Deadline: Rolling
  - Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

**Application Details**

To be considered for admission to the Product Development program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college in engineering (or a related scientific or technical field).
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit 1 letter of recommendation.
- Entrance exam requirements: None
- Writing samples are optional.
Online Tuition Eligibility

- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

TOEFL: 79
IELTS: 6.5
PTE Academic: 56

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant's need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Prerequisites

Have at least two years of experience in product development or a related business environment.

Online Degree Information

The Product Development MS program is designed to be completed part-time (1 or 2 courses per term). Full-time options may be available with Graduate Program Director's approval. Your time to completion will depend on your plan of study, when your courses are offered, what electives you select, and if you choose to/are able to take a class for the summer term. Courses may be synchronous or asynchronous based on the preference of the course instructor. Academic advisors work with students on a study plan after admission to ensure classes fit student availability. Typically students finish this degree in 24-36 months. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

Online Tuition Eligibility

The online Product Development MS is considered a professional degree that is billed at the standard (on campus) RIT graduate tuition rate. It is not billed at the designated online tuition rate. Scholarship is available off the standard tuition rate for this online program. View the current Graduate tuition rate.

Sustainable Engineering, MS

www.rit.edu/study/sustainable-engineering-ms
Katie McConky, Associate Professor
585-475-6062, Katie.McConky@rit.edu

Program overview

Sustainable engineering refers to the integration of social, environmental, and economic considerations into the design of products, processes, and energy systems. Additionally, sustainable engineering encourages the consideration of the complete product and process lifecycle during the design effort. The intent is to minimize environmental impacts across the entire lifecycle of a product or process while simultaneously maximizing the benefits to social and economic stakeholders. This degree builds on RIT's work in sustainability research and education, and offers students the flexibility to develop tracks in areas such as renewable energy systems, systems modeling and analysis, product design, and engineering policy and management.

What is Sustainable Engineering?

Sustainable engineering is the process of deliberately designing systems, manufacturing operations, or products that use energy and natural resources sustainably. Or, in other words, using energy and resources in responsible ways that do not compromise our natural environment, negatively impact our natural resources, or create harm that impacts future generations.

Our sustainable engineering degree is designed to:

- Heighten your awareness of issues in areas of sustainability (e.g., global warming, ozone layer depletion, deforestation, pollution, ethical issues, fair trade, gender equity, etc.).
- Establish a clear understanding of the role and impact of various aspects of engineering (design, technology, etc.) and engineering decisions on environmental, societal, and economic problems. Particular emphasis is placed on the potential trade-offs between environmental, social, and economic objectives.
- Strong ability to apply engineering and decision-making tools and methodologies to sustainability-related problems.
- Demonstrate a capacity to distinguish professional and ethical responsibilities associated with the practice of engineering.

RIT's Sustainable Engineering Degree

The MS in sustainable engineering builds on RIT’s work in sustainability research and education and offers you the flexibility to develop tracks in areas such as renewable energy systems, systems modeling and analysis, product design, and engineering policy and management. Course work is offered on campus and available on a full- or part-time basis. Technical in nature, the program equips engineers with the tools they need to meet the challenges associated with delivering goods, energy, and services through sustainable means. In addition to basic course work in engineering and classes in public policy and environmental management, students are required to complete a final project related to sustainable design challenges impacting society. Many of these projects support the sustainability-themed research being conducted by RIT faculty in research domains such as energy management, life-cycle engineering, packaging design, and sustainable process implementation.

Students must successfully complete four required core courses, two graduate engineering electives in an area of interest (such as energy, modeling, manufacturing and materials, transportation and logistics, or product design and development), one social context elective, one envi-
Environmental technology elective, two semesters of graduate seminar, and a final project. The program is designed to be completed in two years.

**Experiential Learning**

**Cooperative Education and Internships**

What makes an RIT education exceptional? It’s the opportunity to complete relevant, hands-on engineering co-ops and internships with top companies in every single industry. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Cooperative education is strongly encouraged for graduate students in the sustainable engineering master’s program.

www.rit.edu/study/vibrations-adv-cert
Sarilyn Ivancic, Senior Lecturer
585-475-6003, srieme@rit.edu

Program overview

Engineers with skills in vibration engineering contribute to creating manufacturing production systems, aerospace systems, automotive engineering, medical product development, and a host of industrial equipment and process systems in which vibration must be minimized or controlled.

The Impact of Machine Vibrations

Vibrations generated by machines and equipment can be disruptive and disturbing. Engineers often seek to reduce vibration so they can increase the durability and reliability of a machine, machinery system, or product; eliminate stress on a structure; and/or reduce damage, abnormal stoppage, or catastrophic failure. Targeted vibration prevention is the goal of a vibrations engineer.

Vibration Courses

The advanced certificate in vibrations takes you beyond the preparation in vibration engineering that you would typically complete during your undergraduate program of study. In this collection of graduate level courses, you will learn to use sophisticated software tools, analytical techniques and experimental methods to design, develop, and implement solutions for problems of vibration control and minimization in engineering systems. You will also be exposed to modern technologies used in industry to ensure that you are prepared for today’s highly specialized job market. The curriculum answers a need for graduate-level instruction for practicing engineers in a field of importance for the 21st century.

What is a Graduate Certificate?

A graduate certificate, also called an advanced certificate, is a selection of up to five graduate level courses in a particular area of study. It can serve as a stand-alone credential that provides expertise in a specific topic that enhances your professional knowledge base, or it can serve as the entry point to a master’s degree. Some students complete an advanced certificate and apply those credit hours later toward a master’s degree.

Faculty

Dean’s Office

Doreen Edwards, BS, South Dakota School of Mines and Technology; Ph.D., Northwestern University—Dean; Professor

Edward Hensel, BS, Clarkson University; Ph.D., New Mexico State University—Associate Dean of Graduate Studies

Matthew M. Marshall, BS, Rochester Institute of Technology; MS, Ph.D., University of Michigan—Associate Dean of Undergraduate Studies

Biomedical Engineering

Steven Day, BS, Ph.D., University of Virginia—Department Head; Professor, Bioengineering, Implantable Devices, Fluids in Bio systems

Vinay Abhyankar, BS, Binghamton University; MS, Ph.D., University of Wisconsin-Madison—Assistant Professor, Microfluidics, Tissue Engineering, Lab-on-Chip Platforms

Iris Asllani, B.Sc., Nuclear Physics, University of Tirana (Albania); M.Sc., Ph.D., Bioengineering, University of Washington, Seattle—Associate Research Professor, Neuroimaging, Functional MRI, NMR Physics

Jennifer Bailey, BS, Ph.D., Purdue University—Undergraduate Program Director; Principal Lecturer

Edward E. Brown, Jr., BS, University of Pennsylvania; MS, Ph.D., Vanderbilt University—Associate Professor, Rehabilitation, Robotics, Control Systems, Biomechatronics, Engineering Education

Thomas Gaborski, BS, Cornell University; MS, Ph.D., University of Rochester—Professor, Ph.D. Program Director, Nanomaterials, Bioseparations, Cellular Mechanics

Blanca Lapizco-Encinas, BS, Instituto Tecnologico de Sonora (Mexico); MS, Instituto Tecnologico de Celaya (Mexico); Ph.D., University of Cincinnati—Professor, Microfluidics, Microscale Electrokinetics and Bio separations

Cristian Linte, BS, University of Windsor (Canada); MS, Ph.D., University of Western Ontario (Canada)—Associate Professor, Biomedical Image Analysis, Image Computing, Modeling and Visualization

Zhi (Jenny) Zheng, BS, Xidian University (China); MS, Ph.D., Vanderbilt University—Assistant Professor, Intelligent Interactive Systems, Human-Machine Interaction, Human-Centered Computing, Computer Vision, Machine Learning, Pattern Recognition and Data Mining

Michael Richards, BS, University of Rochester; Ph.D., Boston University—Assistant Professor, Image Processing, Mechanical Properties and Interactions of Biological Tissues

Iris V. Rivero, BS, MS, Ph.D., Pennsylvania State University—Kate Gleason Professor, Additive Manufacturing, Biomanufacturing, Hybrid Manufacturing, Friction Stir Welding

Karin Wuerzt, BS, MS, University of Regensburg (Germany); MBA, University of Cumbria (United Kingdom); Ph.D., University of Ulm (Germany)—Kate Gleason Professor, Regenerative Medicine and Tissue Engineering, Inflammation, Mechanobiology

Chemical Engineering

Brian J. Landi, BS, MS, Ph.D., Rochester Institute of Technology—Department Head; Professor, Carbon Nanotubes, Batteries, Wires

Jairo A. Diaz, BSEE, National University of Columbia; (Columbia); Ph.D., Purdue University—Assistant Professor, Macromolecular and Interfacial Phenomena; Optical, Acoustic and Magnetic Control of Matter

Matt Ganter, BS, St. John Fisher College; MS, Ph.D., Rochester Institute of Technology—Assistant Research Professor

Nicole Hill, BS, Ph.D., Rochester Institute of Technology—Visiting Lecturer

Karauna Koppula, B. Tech, Andhra University (India); MS, University of New Hampshire; Ph.D., Michigan State University—Principal Lecturer

Poornima Padmanabhan, B.Tech, Indian Institute of Technology (India); Ph.D., Cornell University—Assistant Professor, Molecular Simulation, Data-Driven Materials Design, Hierarchical Assemblies, Thermodynamics and Mechanics

Alexander D. Roth, BS, ME, Cornell University; MS, The Ohio State University; Ph.D., Cleveland State University—Lecturer

Patricia Taboada-Serrano, BS, Mayor de San Andres University (Bolivia); MS, Simon Bolivar University (Bolivia); Ph.D., Georgia Institute of Technology—Associate Professor, Electrochemical Energy Generation and Storage, Gas-Hydrates, Molecular Modeling, Monte Carlo Methods

Xiangcheng Sun, BE, Harbin Institute of Technology; MS, University of Chinese Academy of Sciences; Ph.D., University of Connecticut—Assistant Professor

Obioma Uche, BS, University of California, Berkeley; MS, Ph.D., Princeton University—Assistant Professor, Molecular Simulation, Statistical Thermodynamics and Mechanics

Steven J. Weinstein, BS, University of Rochester; MS, Ph.D., University of Pennsylvania—Professor, Interfacial Transport Processes, Hydrodynamic Wave Phenomena, Applied Mathematics

Computer Engineering

Amlan Ganguly, B. Tech, Indian Institute of Technology (India); MS, Ph.D., Washington State University—Department Head; Professor, Multi/Many-core Processors, Network-on-Chip, Interconnection Networks, Data Centers, Edge Computer, and 5G

Andres Kwasinski, M.Sc., Ph.D., University of Maryland at College Park—Ph.D., Program Director; Professor, Wireless Networks, Digital Signal Processing, Machine Learning for Communications and Networking, and Smart Infrastructures

Dongfeng Liu, Ph.D., Purdue University—Assistant Professor, Artificial Intelligence, Machine Learning, Deep Learning, Computer Vision, Human-Computer Interaction, and Medical Imaging

Sonia Lopez Alarcon, BS, Ph.D., Complutense University of Madrid (Spain)—Associate Professor, Heterogeneous Computing, High Performance Computing and Architecture

Alexander C. Loui, B.Sc., M.Sc., PhD, University of Toronto (Canada)—Professor of Practice, Computer Vision, Machine Learning, Image/Video Processing and Analysis

Marcin Lukowiak, BS, MS, Ph.D., Poznan University (Poland)—Professor, Reconfigurable Computing, Cryptographic Engineering

Roy W. Melton, BEE, MS, PhD, Georgia Institute of Technology—Principal Lecturer, Computer Architecture, Embedded, Mobile and Cloud Computing

Cory Merkel, BS, MS, Ph.D., Rochester Institute of Technology—Assistant Professor, Artificial Intelligence, Memristive Devices, Neural Networks

Andreas Savakis, BS, MS, Old Dominion University; Ph.D., North Carolina State University—Professor, Digital Image Processing, Computer Vision

Muhammed E. Shaaban, BS, MS, University of Petroleum and Minerals (Saudi Arabia); Ph.D., University of Southern California—Associate Professor, Computer Architecture, High Performance Computing

Shanchieh J. Yang, BS, National Chiao-Tung University (Taiwan);
Electrical and Microelectronic Engineering

Ferat E. Sahin, BS, Istanbul Technical University (Turkey); MS, Ph.D., Virginia Polytechnic Institute and State University—Department Head; Professor, Artificial Intelligence, Control Systems Robotics, Human Robot Collaboration

Mustafa A. G. Abushagur, BS, Tripoli University (Libya); MS, Ph.D., California Institute of Technology—Professor, Micro-optical Systems, Micro- and Nanophotonic Devices

Carlos Barrios, BS, MS Rochester Institute of Technology—Lecturer, Digital Systems

David Borkholder, BS, Rochester Institute of Technology; MS, Ph.D., Stanford University—Bausch and Lomb Professor, Biosensors (Electromagnetic and Chemical), Biomedical Instrumentation, MEMS Fabrication, Drug Delivery, Systems Engineering

Tejasvi Das, MS, Ph.D., Rochester Institute of Technology—Associate Professor, Analog, RF and Mixed-Signal IC Domain such as IoT sensing, interference robustness, haptics, audio processing, self-calibration, adaptive circuits and back-end algorithms

Sohail A. Dianat, BS, Aria-Mehr University of Technology (Iran); MS, Ph.D., George Washington University—Professor, Control Systems, Communications, Signal/ Image Processing

Lynn F. Fuller, BS, MS, Rochester Institute of Technology; Ph.D., State University of New York at Buffalo—Professor Emeritus, IC Design, Semiconductor Manufacturing, MEMS and Microsystems

Sergey Lyshhevski, MS, Ph.D., Kiev Polytechnic Institute (Ukraine)—Professor, Microsystems, Mechatronics, Control Systems, Non-Linear Control

Jamison Heard, BS, University of Evansville; MS, Ph.D., Vanderbilt University—Assistant Professor, Robotics, Human-Machine Systems, and Human-Robot Interaction

Karl D. Hirschman, BS, MS, Rochester Institute of Technology; Ph.D., University of Rochester—Associate Department Head, Microelectronic Engineering Programs; Director, Semiconductor and Microsystems Fabrication Laboratory; Professor, Semiconductor Process Integration, Photonic Devices

Christopher R. Hoople, BS, MS, Cornell University—Senior Lecturer, Power Electronics, Device Physics

Jason Hoople, BS, MS, Rochester Institute of Technology; Ph.D., Cornell University—Lecturer, Analog Circuits and Systems, Integrated Piezoelectric Transducers, Integrated CMOS Technology

Mark Indovina, BS, MS, Rochester Institute of Technology—Director of Outreach and Facilities; Senior Lecturer, Integrated Circuits Design and Digital Signal Processing

Michael A. Jackson, BS, MS, Ph.D., State University of New York at Buffalo—Associate Professor, Solid State Devices, IC Metrology, Electronic Materials and Processing, Photovoltaics

Sunwoong Kim, BS, MS, Ph.D., Seoul National University (South Korea)—Assistant Professor, Custom Hardware Architectures for Cryptographic and Multimedia Systems, Approximate Computing Algorithms and Hardware Architectures, Privacy-Preserving Solutions for Cyber-Physical Systems, Lightweight Computer Vision Algorithms, Computer and Memory Architectures, Acceleration of Big Data Processing

Santosh Kuriniec, BS, MS, Ph.D., University of Delhi (India)—Professor, Electronic Materials and Devices, IC Processing, Quantum and Nanoscale Devices, Non-Volatile Memory, Photovoltaics

James Moon, BS, Carnegie Mellon University; MBA, University of Rochester; MS, Ph.D., University of California at Berkeley—Professor, Semiconductor and Solid State Physics, Integrated Circuit Design, Microfluidic MEMS

Dorin Patru, BS, MS, Technical University of Cluj-Napoca (Romania); Ph.D., Washington State University—Associate Professor, Domain Specific Computing Architectures, Artificial Neural Networks, Artificial Intelligence

Robert E. Pearson, BS, MS, Rochester Institute of Technology; Ph.D., State University of New York at Buffalo—Associate Professor, Advanced Device and Process Modeling, VLSI Design and Parameter Extraction

Dan Phillips, BS, State University of New York at Buffalo; MS, Ph.D., University of Rochester—Associate Professor, Biomedical Instrumentation, Signal Processing and Visualization, and Embedded Systems

Ivan Puchades, BS, MS, Ph.D., Rochester Institute of Technology—Associate Professor, MEMS Design and Fabrication, Carbon Nanotubes and Nanomaterials

Majid Rabbani, BS, Aria-Mehr University of Technology (Iran); MS, Ph.D., University of Wisconsin-Madison—Professor of Practice, Signal and Video Processing, Pattern Recognition, Image Compression

Sean L. Rommel, BS, Ph.D., University of Delaware—Professor, Emerging Semiconductor Devices, Photonic Devices, Integration

Eli Saber, BS, State University of New York at Buffalo; MS, Ph.D., University of Rochester—Professor, Signal Image and Video Processing, Communications, Biomedical Imaging, Computer Vision

Gill R. Tsouri, B.S., M.S., Ph.D., Ben-Gurion University (Israel)—Professor, MIMO, OFDM/OFDMA Systems, Wireless Sensor Networks, Diversity Methods

Ali Reza Vahid, B.S., Sharif University of Technology (Iran); M.S., Ph.D., Cornell University—Associate Professor, Wireless communications and networking, information and coding theory, feedback channel, dynamic spectrum access, physical-layer security, coding for storage, sequence assembly

Jyanti Venkataraman, BS, MS, Bangalore University (India); Ph.D., Indian Institute of Science (India)—Associate Department Head, Electrical Engineering Programs; Professor, Electromagnetics, Microwaves and Antennas

Bing Yan, BS, Renmin University of China; MS, Ph.D., University of Connecticut—Assistant Professor, Power, Smart Power Systems, Intelligent Manufacturing Systems

Jing Zhang, BS, Huazhong University (China); Ph.D., Lehigh University—Associate Professor, Devices fabrication of III-Nitride semiconductors for photonics

Industrial and Systems Engineering

Iris V. Rivero, BS, MS, Ph.D., Pennsylvania State University—Department Head, Kate Gleason Professor, Additive Manufacturing, Biomanufacturing, Hybrid Manufacturing, Friction Stir Welding

Nasibeh Azadeh Fard, BS, Iran University of Science and Technology; MS, Ph.D., Virginia Polytechnic Institute and State University—Assistant Professor, Data Analytics, Healthcare Systems
Ergonomics, Human Factors Institute and State University—MS, Ph.D., Virginia Polytechnic University of Technology (Iran); Ehsan Rashedi
State University—Associate University; MS, Ph.D., Pennsylvania Esa M. Rantanen
Associate Professor, Operations at Urbana-Champaign—MS, Ph.D., University of Illinois Ruben A. Proaño
Optimization and Forecasting Analytics, Operations Research, Applied Statistics, University of New York at Buffalo—Institute of Technology; Ph.D., State K. McConky
Machine Process Simulation Machining Process Optimization, Rapid Prototyping
Michael E. Kuhl, BS, Bradley University; MS, Ph.D., North Carolina State University—Professor, Simulation Modeling and Analysis applied to Manufacturing, Intelligent Materials Handling, Supply Chain, and Healthcare Systems
Rui Liu, BS, Beijing University (China); MS, Northeastern University; Ph.D., Georgia Institute of Technology—Assistant Professor, Advanced Manufacturing, Machining Process Optimization, Machine Process Simulation
Katie McConky, BS, MS, Rochester Institute of Technology; Ph.D., State University of New York at Buffalo—Ph.D. Program Director; Associate Professor, Applied Statistics, Analytics, Operations Research, Optimization and Forecasting
Ruben A. Proaño, BS, Universidad San Francisco de Quito (Ecuador); MS, Ph.D., University of Illinois at Urbana-Champaign—Associate Professor, Operations Research, Logistics/Supply Chain Management
Esa M. Rantanen, BS, MS, Embry-Riddle Aeronautical University; MS, Ph.D., Pennsylvania State University—Associate Professor
Ehsan Rashedi, BS, MS, Sharif University of Technology (Iran); MS, Ph.D., Virginia Polytechnic Institute and State University—Assistant Professor, Biomechanics, Ergonomics, Human Factors

Yunbo “Will” Zhang, BS, Shandong University (China); MS, Huazhong University of Science and Technology (China); Ph.D., The Chinese University of Hong Kong—Assistant Professor, Smart Manufacturing, Design for Additive Manufacturing, Geometric Processing, Human-Computer Interaction, Computer-aided Design/Computer-aided Manufacturing

Mechanical Engineering

Risa J. Robinson, BS, MS, Rochester Institute of Technology; Ph.D., State University of New York at Buffalo—Department Head, Professor, Bioengineering, Respiratory Device Technologies, Aerosol Transport in Biological Systems
Margaret Bailey, BS, Pennsylvania State University; Ph.D., University of Colorado at Boulder, PE—Senior Faculty Associate to the Provost for ADVANCE; Professor, Energy Systems, Thermodynamics, Building Systems
Stephen Boedo, BA, State University of New York at Buffalo; MS, Ph.D., Cornell University—Associate Professor, Tribology and Lubrication, Hip Joint Design, Computational Methods and Design Guidelines for Bearing Systems
Robert Carter, BS, University of Maine; Ph.D., Cornell University—Associate Department Head; Senior Lecturer
Agamemnon L. Crassidis, BS, MS, Ph.D., State University of New York at Buffalo—Associate Professor, Aerospace Engineering, Nonlinear Dynamics and Controls
Steven Day, BS, Ph.D., University of Virginia—Professor, Bioengineering, Implantable Devices, Fluids in Biosystems
Alfonso Fuentes-Aznar, MS, University of Murcia (Spain); Ph.D., National University of Distance Education (Spain)—Associate Professor, Gear Transmission, Enhanced Design Technologies for all Types of Gear Drives
Hany A. Ghoneim, BS, MS, Cairo University (Egypt); Ph.D., Rutgers University—Professor, Finite Elements, Vibrations
Amitabha Ghosh, B.Tech., M.Tech., Indian Institute of Technology (India); Ph.D., Mississippi State University—Professor, Computational Fluid Dynamics, Aerodynamics, Aerospace Engineering
Mario W. Gomes, B.S., Cornell University; MS, Georgia Institute of Technology; Ph.D., Cornell University—Assistant Professor, Sustainable Energy Systems
Surendra K. Gupta, B.Tech., Indian Institute of Technology (India); MS, University of Notre Dame; Ph.D., University of Rochester—Professor, Materials Science, Computer Software, Image Processing
Phillip Hutton, BS, University of Pittsburgh, MS, Old Dominion University, MS, Carnegie Mellon University, Ph.D., University of North Dakota—Lecturer
Patricia Iglesias Victoria, B.S.E., Polytechnic University of Cartagena (Spain)—Associate Professor, Friction and Wear, Tribology, Material Science
Sarilyn Ivanic, BS, MS, Ph.D., University of Rochester—Graduate Program Director; Senior Lecturer
Satish G. Kandlikar, BE, Marathwada University (India); M.Tech., Ph.D., Indian Institute of Technology (India)—James E. Gleason Professor, Thermal Systems and Energy
Jason R. Kolodziej, BS, MS, Ph.D., State University of New York at Buffalo—Associate Professor, Hybrid Vehicle Technology and Renewable Energy

The diverse, graduate-level programs offered by the College of Engineering Technology represent RIT’s commitment to curricular innovation, program flexibility, and academic rigor. The college is committed to advancing the state of the education we provide through research, the latest uses of technology, and current management theories and educational philosophies.

Please visit the college’s website—[www.rit.edu/engineeringtechnology](http://www.rit.edu/engineeringtechnology)—for in depth information on academics, faculty, facilities, research initiatives, advising, and more.

## Admission requirements

Each college makes all decisions regarding graduate admission. Please refer to the individual program descriptions for information regarding specific admission criteria. For general graduate admission information, please refer to the Admission section of this bulletin.

## Financial aid and scholarship

Please refer to the Financial Aid and Scholarship section of this bulletin for information regarding financial aid, scholarships, grants, loans, and graduate assistantships.
Communication Networks, MS

www.rit.edu/study/communication-networks-ms

James Lee, Associate Professor
585-475-2899, jhleme@rit.edu

Program overview

Telecommunications and communication networks are ever changing, with new services and products being created and offered through the internet, mobility via wireless technology, extreme capacity created by fiber optics, as well as the evolution of policy and regulation. These are all shaping the telecommunication industry and the networks of the future.

Master’s in Communication Networks

The MS in communication networks develops an advanced level of skill and knowledge needed by the future leaders of the telecommunications industry. This program is designed for individuals who seek advancement into managerial roles in the dynamic, evolving communications environment. Courses cover converged and IP networks, fiber optic communications, wireless networks, and network design and management.

To help you achieve the level of expertise you are seeking, the program offers three options: fiber-optic and photonic communications, wireless communications, and network design and management. Each is designed to develop advanced knowledge in a specialty area. Alternatively, you may choose not pursue a program option. Instead, you may select specific electives from a number of RIT’s graduate programs to achieve more specific career goals.

Experiential Learning

Cooperative Education

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience.

College of Engineering Technology
College of Engineering Technology

Admission requirements

This program is available on-campus only.

Offered Full-time
Full-time Admit Term(s): Fall or Spring
Full-time Application Deadline: Rolling
Full-time STEM Designated: Yes
Offered Part-time
Part-time Admit Term(s): Fall or Spring
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Communication Networks program, candidates must fulfill the following requirements:
- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college in engineering technology, engineering, or a related area.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

TOEFL: 79
IELTS: 6.5
PTE Academic: 56

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant's need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Bridge Courses

Applicants with a bachelor's degree in fields outside of engineering technology, engineering, or related fields may be considered for admission, however, bridge courses in Computer Programming may be required to ensure the student is adequately prepared for the program.

Construction Management, MS

www.rit.edu/study/construction-management-ms

Yi Su, Visiting Lecturer
585-475-6978, yxsite@rit.edu

Program overview

Construction management jobs will grow 11% by 2030, double the overall labor market growth. Review our curriculum and you’ll find program fulfills the in-demand skills and expertise posted in job listings by employers in this fast-growing and high-demand field.

The master of science degree in construction management is specifically designed for experienced construction management professionals interested in advancing into leadership positions within the field. The program may also accommodate recent graduates of undergraduate programs in construction management or related disciplines. The program is offered entirely online.

Aging U.S. Infrastructure Creates High Demand for Construction Managers

America’s infrastructure is challenged. Clogged roads, unsafe pipes, aging bridges and railways, limited broadband access, and so much more.

But what you may not have thought or heard as much about is the enormous infrastructure workforce challenge facing the country. The Brookings Institute’s 2018 estimates show that nearly 17.2 million workers—or about 12 percent of all workers nationally—are employed in infrastructure jobs. And, they note, that just as our physical infrastructure systems are aging and in need of attention, so too are the workers who design, construct, operate, and manage these systems.

A Construction Management Degree Offered Exclusively Online

The master of science in construction management provides a depth and breadth in the managerial, technological, economic, and environmental aspects of construction. With an emphasis on operations and company-level management, this advanced degree from RIT offers courses to enhance understanding in construction, facilities management, and related fields.

Designed for working professionals, this degree is offered 100% online. It’s a flexible degree that provides the requisite strategic skills to lead and advance in the industry. You will develop competencies in the context of the field in leadership, innovative technology, cost analysis and control, operations management and productivity, business development, and client relationship building. The curriculum includes core courses, professional electives, and a choice of a thesis, capstone project, or comprehensive exam.

In-demand areas include construction project management, facilities management, environmental health and safety management, and business management and leadership. The program focuses on developing the skills that are most in-demand for construction managers, and yield premium salaries, such as:

- Contract Management: Contract management skills yield a salary premium in the marketplace, and demand for contract preparation skills is growing by 60%.
- Project Management: Project management skills are requested in 60% of postings for construction managers.
- Facilities Management: Demand for occupational health and safety skills is growing by 19%.
- Quality: Demand for quality assurance and control skills is growing by 40%.
Experiential Learning

Cooperative Education

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Cooperative education is optional but strongly encouraged for graduate students in the construction management MS degree.

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Construction Management program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent) in construction management, civil engineering, civil engineering technology, or a related program that includes at least 15 semester hours of college-level math and science. Applicants holding other bachelor's degrees with appropriate, related work experience will be considered for admission on an individual basis.
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 79
- IELTS: 6.5
- PTE Academic: 60

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant's need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Additional English Language Test Score Accepted

TOEFL, IELTS, or CET-4 is accepted. For CET-4, an overall score of 530 is required (Reading ≥ 180, Writing ≥ 160, Listening ≥190).
Bridge Courses
If academic and/or work preparation is needed before being admitted and beginning graduate studies, applicants are encouraged to develop a plan with the program chair. Preparatory course(s) may be completed at RIT, or with pre-approval may be completed at other universities. Each course must be completed with a grade of B or higher.

Online Degree Information
Courses are a blend of synchronous and asynchronous, depending on the preference of the instructor. Synchronous courses are offered in the evening, between 5-8 pm, ET. For students who are unable to attend courses during this time due to their work schedule and/or time zone, sessions will be recorded and shared by request and faculty will work with students to be sure material is not missed. Full-time students can take 3 or 4 courses each semester, allowing them to graduate in 1.5 years. Part-time students usually take two courses each semester and can graduate in 2.5 years. Students need to take 6 required courses and 2 to 4 professional electives depending on the exit strategy they choose. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. The program offers three exit strategies: exam, capstone project, or thesis. RIT does not offer student visas for online study.

Online Tuition Eligibility
The online Construction Management MS is a designated online degree program that is billed at a 43% discount from our on campus rate. View the current online tuition rate.  

Environmental, Health and Safety Management, MS

www.rit.edu/study/environmental-health-and-safety-management-ms
Joseph Rosenbeck, Professor  
5854756469, jmrcem@rit.edu

Program overview
Management of environmental, health and safety issues has changed significantly in recent years. The emergence of voluntary standards and codes of conduct, including international standards, coupled with the need to manage costs and limited resources, has resulted in a trend to move beyond regulatory compliance. Now, companies work toward sustainability through the use of integrated environmental and management systems, which are woven into key business processes. As a result, there is growing demand for professionals who can manage an organization's environmental, health, and safety performance successfully. Employment in this field is expected to grow at a faster rate than overall employment growth through 2030.

Although they are distinct disciplines, environmental management, occupational health, and workplace safety share many technical, regulatory, and organizational characteristics. Today's professionals need to be educated in all three areas. Graduates of the program are employed by Fortune 100 companies, environmental health and safety consultancies, universities, and government agencies such as the Environmental Protection Agency, Occupational Safety and Health Administration, and the New York State Department of Environmental Conservation.

RIT’s Environmental Health and Safety Degree: On-Campus or Online

The MS degree in environmental, health and safety management provides you with a solid foundation in the managerial aspects of developing and implementing environmental, health and safety management systems that can move organizations toward a more sustainable and socially responsible future. In addition, you'll gain a solid technical foundation in air emissions, wastewater, solid and hazardous waste, occupational safety, and occupational health (industrial hygiene). Elements of sustainability are integrated into most core courses and some electives. Within this course work you will learn:

- How to create effective integrated environmental, health and safety management systems that conform to national and international consensus standards
- Strategies and tools for integrating environmental, health and safety into business management that can drive the organization towards sustainability
- Quality continuous improvement processes to identify and manage environmental, health and safety risk and opportunities
- How to design and implement an effective environmental, health and safety audit program

The program may be completed entirely online, or via a combination of online and traditional on-campus courses. The curriculum includes core courses, professional electives, and a choice of a thesis, capstone project, or comprehensive exam.

Professional electives can include courses in topics as diverse as fire protection, occupational health, solid and hazardous waste management, industrial wastewater management, air emissions management, occupational safety, mechanical and electrical controls and standards, environmental health and safety law, accounting and finance, project management, and organizational behavior and leadership. Additional
professional electives are available in topics such as business management, quality, sustainability, and other areas.

Experiential Learning

Cooperative Education

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next hires.

Full-time students are eligible to participate in RIT’s cooperative education program. After completing two semesters (a minimum of 18 credit hours), students may request approval to complete up to one year of cooperative education employment related to their field of study.

Graduate Bulletin 124
Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Prerequisites
- Applicants without formal academic training or documented experience in air emissions, waste water, solid and hazardous waste, occupational health, or occupational safety may be required to take professional electives in these areas.
- Applicants must have completed at least 9 semester hours of college-level course work in the sciences, with at least 3 semester credit hours in each of the following categories: chemistry, biology, and physics.
- Applicants with acceptable professional certification(s) and/or work experience may have prerequisite science course work waived.

Online Degree Information
The online program may be completed entirely through online asynchronous or synchronous courses, or a blend of both. There are no in-person requirements. All core courses are asynchronous and offer flexibility for students in different time zones and varying work schedules. Any synchronous courses would be clearly conveyed at the time of enrollment/registration. The EHS Management degree can be culminated by a thesis, capstone project, or exam. Most students complete the comprehensive examination. Some are able to complete a capstone project or a thesis with program permission. You do not need to choose your completion option at the time of enrollment. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

Online Tuition Eligibility

The online Environmental, Health and Safety Management MS is a designated online degree program that is billed at a 43% discount from our on-campus rate. View the current online tuition rate.

Manufacturing and Mechanical Systems Integration, MS

www.rit.edu/study/manufacturing-and-mechanical-systems-integration-ms
Martin K. Anselm, Associate Professor
585-475-2005, mkamet@rit.edu

Program overview

The MS in manufacturing and mechanical systems integration is a manufacturing engineering degree designed for individuals who wish to achieve a high level of aptitude, competence, and skill in mechanical or manufacturing engineering, or advanced mechanical systems. The program combines engineering, business, and management to effectively guide and lead in a range of manufacturing enterprises.

The program is offered by the department of manufacturing and mechanical engineering technology in collaboration with Saunders College of Business and the Kate Gleason College of Engineering.

Manufacturing Engineering Courses

The manufacturing engineering degree includes core courses that cover manufacturing and mechanical systems fundamentals, project management, advanced mechanical systems, integrated mechanical systems, manufacturing process improvements and efficiencies, and the business and financial aspects of manufacturing. You’ll also complete a three-course option, elective courses, and a capstone project, thesis, or comprehensive exam.

Options are available in advanced mechanics, electronics packaging, polymer engineering and technology, product design, quality, and robotics and advanced manufacturing systems. Students may be required to take additional prerequisite courses depending on their background and the option selected. The graduate director may approve the waiver of courses in the prerequisite group from graduation requirements, depending on a student’s academic and employment background.

- Advanced Mechanics: The advanced mechanics option analyzes classical and contemporary theoretical models of material structures. Practical methods and approaches, experimental results, and optimization of material properties and structure performance are put to use for capstones and thesis projects. Students who plan on careers in advanced mechanical modeling and design should consider this option.
- Electronics Packaging: Students in this option receive a detailed education in printed circuit board assembly design, manufacturing, materials, failure modes, and root causes. They’ll also gain a broad understanding of best practices and learn the scope of the industry. Anyone who plans on designing or manufacturing products that contain circuit board assemblies, in either rigid or flexible formats, would benefit from this option. Topics of study include electronics miniaturization, defect analysis, solder reliability, and process optimization.
- Polymer Engineering and Technology: The purpose of this option is to equip future engineers with the unique skills necessary to enter the plastics industry, one of the largest manufacturing related industries in the United States. Successfully developing new plastics materials and products requires specialized knowledge of these complex manufacturing systems. A critical component of this option is the completion of a research project in the area of plastics and polymer technology. Some projects have focused on polymer composites, shape memory/self-healing materials, 3D printing, and biodegradable polymers.
- Product Design: Product design in the 21st century requires a skill set that has grown to be much more than just designing parts that fit together in a product. Parts and products must now be designed with consideration for the best choices of features, the ability to function...
ideally under varying conditions and environments, and ease in manufacturing and assembly. These skills are all required by today’s engineers and product designers and are equally important for engineering managers to understand.

- Quality: The quality option enables students to lead a problem-solving project within a quality management team. Students will learn to reduce unacceptable variability in materials, production, and manufacturing systems resulting in high quality finished products. Students will use skills in robust design, linear regression, and modeling to show that variability can be reduced and that a solution is sustainable. Students who select this option may be interested in pursuing a leadership role as a manufacturing engineer, senior quality engineer, continuous process improvement engineer, or process engineer.

- Robotics and Advanced Manufacturing Systems: Robotics is more than software. In addition to programming, students who choose this option will study how robotic systems are designed to complement a manufacturing system or aid in human assistance products with a focus on limitations and design improvements. Capstone and thesis projects involve optimization and improvement of designs to achieve a specific robotic behavior or task. Robotic integrators as well as robotic designers will benefit by learning robotic mechanical and electrical limitations and development.

Electives

The number of electives needed to complete the program is based on whether the student chooses to complete a thesis, capstone project, or comprehensive exam. The thesis option requires one elective, the capstone project requires two electives, and the comprehensive exam option requires three electives. Elective courses can be any course from a different concentration from the one chosen, a graduate-level course from another program (if approved by the graduate director and faculty member teaching the course), or an independent study course (if approved by the student’s graduate program director).

Experiential Learning

Cooperative Education

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience you need for the job you want.

Full-time students are eligible to participate in RIT’s cooperative education program. After completing two semesters (a minimum of 18 credit hours), students may request approval to complete up to one year of cooperative education employment related to their field of study.

## Admission requirements

This program is available on-campus only.

### Offered Full-time
- Full-time Admit Term(s): Fall or Spring
- Full-time Application Deadline: Rolling
- Full-time STEM Designated: Yes

### Offered Part-time
- Part-time Admit Term(s): Fall or Spring
- Part-time Application Deadline: Rolling
- Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

## Application Details

To be considered for admission to the Manufacturing and Mechanical Systems Integration program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college in the field of engineering, engineering technology, or computing. Students with degrees in other disciplines will be considered on an individual basis.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit 1 letter of recommendation.
- Entrance exam requirements: GRE required for individuals with degrees from international universities. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

### English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 79
- IELTS: 6.5
- PTE Academic: 56

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

## Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

## Additional Information

### Bridge Courses

- Applicants without a robotics background who want to do the robotics concentration will be assigned additional bridge courses.
- Applicants without a modeling background who want to do the advanced mechanics concentration will be assigned additional bridge courses.

Packaging Science, MS

www.rit.edu/study/packaging-science-ms

Erin Aaron,
585-475-2278, eeaast@rit.edu

Program overview

Designed for packaging professionals to become experts in the packaging development process, the master's in packaging science focuses on selecting raw materials, developing environmentally friendly packaging solutions, and creating functional packaging that withstands environmental, chemical, and physical stresses during distribution and transportation. The program will also help you to keep these functional aspects in mind as you develop attractive packaging designs that are aesthetically pleasing as they pique consumer interest. This master's in packaging science combines theoretical and hands-on learning experiences that enable you to gain comprehensive knowledge related to packaging design, packaging testing, product marketing, project management, and quality control.

What is Packaging Science?

Packaging science is a dynamic field that integrates engineering, design, and business to develop and design product packaging for a range of consumer goods. Packaging engineers and packaging designers focus on understanding the packaging needs of a product and what it must accomplish. These needs can range from maintaining food freshness and safety, keeping products safe from damage during transportation, appealing to consumers at the point of purchase, communicating product information, sustaining transportation efficiency, complying with sustainable practices for post-use recycling and reuse, and more. It's the role of packaging engineers and packaging designers to responsibly weigh these factors into the conceptualization, design, and development of product packaging.

Packaging Engineering Courses

The master's in packaging science consists of core courses, elective courses, and either a comprehensive exam, capstone project, or thesis. The total number of elective courses depends on the student's choice of the exam, project, or thesis option. Faculty advisors assist in selecting an option that best meets a student's career aspirations.

Core courses cover topics such as packaging dynamics, packaging and the environment, product packaging for end use, and distribution systems including supply chain management. Elective courses are approved by the student's advisor and must meet degree requirements. In certain circumstances, with pre-approval by the graduate advisor and where individual need indicates appropriateness, a limited number of upper-level undergraduate courses may be used to fulfill elective credit. Students, with advisor permission, may include independent study as part of their elective credits. However, independent study may not be used toward the required packaging core course work. Courses selected for elective credit may be combined to create special areas of focus with program chair approval.

Green Belt – Lean Six Sigma

Students may elect to pursue Green Belt certificate in Lean Six Sigma with the completion of the thesis or capstone project. Certification requires students to complete the Lean Six Sigma Yellow Belt Certification training program as one of their electives. Upon completion, students must implement the fundamentals of Lean Six Sigma within their thesis or capstone project.

Experiential Learning

Cooperative Education

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Full-time students may choose to complete cooperative education. After completing two semesters of study (a minimum of 18 credit hours), students may request approval to complete up to one year of cooperative education related to packaging.

Admission requirements

This program is available on-campus only.

Offered Full-time
Full-time Admit Term(s): Fall
Full-time Application Deadline: Rolling
Full-time STEM Designated: Yes

Full-time study is 9+ semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Packaging Science program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

TOEFL: 79
IELTS: 6.5
PTE Academic: 56

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Prerequisites

Applicants must have completed at least one semester of physics (mechanics focus), one semester of calculus, one year of chemistry (including organic chemistry), statistics, and basic computer literacy.

Bridge Courses

Applicants who do not have an equivalent bachelor's degree in packaging science will be evaluated and the appropriate undergraduate bridge courses will be prescribed. These courses may not be used for credit toward the MS degree.

Print and Graphic Media Science, MS

www.rit.edu/study/print-and-graphic-media-science-ms
Bruce Myers, Associate Professor
585-475-5224, blmppr@rit.edu

Program overview

The MS program in print and graphic media science offers students an opportunity to explore new areas of research in the graphic communications field. The program's faculty and curriculum focus on establishing quality and efficiencies pertaining to business, technology, and processes in graphic communications. Recent student research includes 3D printing quality analysis, consumer preferences for printed textiles, user experience in digital publishing, and implementation of lean techniques in printing. Our faculty are experts in many different areas, including print, business, color management, web and IT, digital publishing, imaging, and typography. Students have the opportunity to get hands-on experience by working with faculty as graduate assistants either in the classroom or assisting with faculty research. Graduates are employed as industry leaders in advertising, publishing, business operations, communication processes, and product developments.

Print and Graphic Media Science Courses

The print and graphic media science degree includes core courses, electives, and a thesis. The thesis provides an opportunity for students to explore in-depth research and present their findings.

Electives: The program encourages cross-disciplinary and interdepartmental collaboration. Students may choose elective courses from a variety of courses offered in the department of graphic media science and technology or with other graduate departments and programs at RIT with approval of the graduate director.

Capstone/Research/Thesis Options: As part of the program, students must complete a capstone project, a research option, or a thesis. This choice of option provides flexibility for students to choose the path that bests aligns with their career goals.

- Capstone Option: Students interested in developing an individual interest in an aspect of print media and/or the graphic communication industry may complete a unique capstone project. This option includes one additional elective course.
- Research Applications and Problem-Solving Option: Students interested in focusing on the application of their knowledge in a team-based environment may choose to complete a research course. This option includes one additional elective course.
- Thesis Option: Students are required to complete a research thesis that demonstrates original thinking and creativity in the search for new knowledge in the graphic communication industry. Students work with expert faculty and focus on a particular topic of thesis research in areas including content management, publishing workflows, typography and layout, business trends, color management, media processes, materials, and applications of printing.

Experiential Learning

Cooperative Education and Internships

What makes an RIT education exceptional? It's the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more
about graduate co-op and how it provides you with the career experience employers look for in their next top hires. Co-op is optional but strongly encouraged for graduate students in the MS in print and graphic media science.

Karen L. Proctor, BS, Michigan State University; MBA, Rochester Institute of Technology—Professor

Alexis Rich, BS, ME, Rochester Institute of Technology—Enterprise Lab Manager; Senior Lecturer
The United States faces a looming shortage of many types of health care professionals, including nurses, physicians, dentists, pharmacists, and allied health workers. The college, housed in the Institute of Health Sciences and Technology, serves as an independent academic and research entity designed to provide a focused, interdisciplinary, and systems approach to innovative health care education, applied/translational research, and community outreach. The institute incorporates three major thrusts: the College of Health Sciences and Technology, a Health Science Research Center, and a Health Science Community Collaboration and Outreach Center.

The college offers clinically related and biomedical research-based programs to meet both the present and future needs of the health care system. The college’s faculty and staff are committed to delivering high quality educational programs. Building on a foundation of liberal arts and basic sciences, students will gain advanced knowledge in theoretical science and practical applications in experiential learning environments. These experiences prepare students to serve as practitioners, scientists, and leaders through their contribution to, and the provision of, high-quality patient care, health care service, and/or applied, translational biomedical research.

Please visit the college’s website—www.rit.edu/healthsciences—for in depth information on academics, faculty, facilities, research initiatives, advising, and more.

**Admission requirements**

Each college makes all decisions regarding graduate admission. Please refer to the individual program descriptions for information regarding specific admission criteria. For general graduate admission information, please refer to the Admission section of this bulletin.

**Financial aid and scholarships**

Please refer to the Financial Aid and Scholarship section of this bulletin for information regarding financial aid, scholarships, grants, loans, and graduate assistantships.
Dietetics and Nutrition, MS

www.rit.edu/study/dietetics-and-nutrition-ms

Kristie O’Connor, Lecturer
585-475-5320, kloihst@rit.edu

Program overview

Registered dietitian nutritionists (RDN) engage people of all ages, cultures, health concerns, and socioeconomic levels to address a range of nutritional needs. RDNs are skilled health care professionals who apply the art and science of food and nutrition at individual, institutional, organizational, community, and population levels.

RIT’s Master of Science in Dietetics and Nutrition

This program, housed in the Wegmans School of Health and Nutrition, has a dynamic curriculum addressing new connections between technology and health. In addition to meeting all competencies for entry-level practice as an RDN by the Accreditation Council for Education in Nutrition and Dietetics (ACEND)—the accreditation body for programs in nutrition and dietetics—graduates demonstrate research expertise through the completion of a thesis that includes technology as an aspect of nutrition and dietetics practice.

Program faculty hold doctorates and are Registered Dietitian Nutritionists with professional expertise in a wide range of topics. Following graduation, you will be prepared to practice in a variety of settings including hospitals, clinics, universities, research facilities, food and pharmaceutical companies, public health organizations, government agencies, communication and marketing firms, professional sports organizations, commercial food service operations, and corporate well-being units. Completion of the MS degree in dietetics and nutrition meets the course work and supervised experiential learning requirements to sit for the Registered Dietitian/Nutritionist examination.

Becoming a Registered Dietitian Nutritionist (RDN)

The following are the steps necessary to become a Registered Dietitian Nutritionist:

• Successful completion of the MS in dietetics and nutrition degree requirements.
• Pass the Commission on Dietetic Registration Credentialing Exam for Dietitians.

In addition to the professional RDN credential, a majority of states currently have statutory provisions (licensure/certification) regarding professional regulation of dietitians and/or nutritionists. Information regarding statutes of individual states is provided by the Academy of Nutrition and Dietetics.

Visit the Academy of Nutrition and Dietetics for more information about educational pathways to become an RDN.

Careers in Nutrition

Changes in the health care landscape are helping to make dietetics and nutrition professionals highly sought after for excellent career opportunities. Now, more than ever, RDN’s practice in a wide range of settings, including:

• Hospitals
• Clinics
• Universities
• Government Agencies
• Research Facilities
• Food and Pharmaceutical Companies

• Public Health Organizations
• Journalism
• Marketing
• Sports Nutrition
• Commercial Food Service Operations
• Corporate Well-Being Units

Additional Information and Program Policies

Additional information, including estimated annual costs and program policies, is available in the Dietetics and Nutrition Program Guide. Program outcomes data are available upon request by emailing healthandnutrition@rit.edu.

Learn more about the program’s mission, goals, and objectives.

Experiential Learning

Supervised Experiential Learning

Students complete three Supervised Experiential Learning (SEL) courses providing practical, hands-on learning in culinary and food service operations, community, and clinical settings. SEL course activities are integrated with concurrent classroom-based courses to translate knowledge into practice, preparing graduates to pass the RDN credentialling exam and start careers in dietetics and nutrition.

Accreditation

Rochester Institute of Technology's dietetics and nutrition graduate program has been granted candidacy status by the Accreditation Council for Education in Nutrition and Dietetics (ACEND) of the Academy of Nutrition and Dietetics. Candidacy status is granted to academic institutions who have demonstrated the ability to house a dietetics program.

Students in a candidacy-status program are considered graduates of an accredited program and are eligible to sit for the National Registration Examination for Dietitians, upon successful program completion.

More information on ACEND and its accreditation standards are available at:

Accreditation Council for Education in Nutrition and Dietetics
120 South Riverside Plaza, Suite 2190
Chicago, IL 60606-6995
(312) 899-0040 ext 5400 or (800) 877-1600
https://www.eatrightpro.org/acend

Admission requirements

This program is available on-campus only.

Offered Full-time

Full-time Admit Term(s): Fall
Full-time Application Deadline: February 28 priority deadline, rolling thereafter
Full-time STEM Designated: No

Offered Part-time

Part-time Admit Term(s): Fall
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Dietetics and Nutrition program, candidates must fulfill the following requirements:

- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

<table>
<thead>
<tr>
<th>Test</th>
<th>Minimum Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOEFL: 79</td>
<td></td>
</tr>
<tr>
<td>IELTS: 6.5</td>
<td></td>
</tr>
<tr>
<td>PTE Academic: 56</td>
<td></td>
</tr>
</tbody>
</table>

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant's need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Prerequisites

Applicants must show evidence of course work in the natural sciences (e.g., biology and biochemistry) and in courses related to nutrition and dietetics covering topics such as techniques of dietetics education, nutrition and integrative medicine, community nutrition, customer experience management, and microbiology of health and disease. Applicants holding a Verification Statement from an ACEND-accredited program in didactics are considered to have met these requirements.

Scholarships

Students interested in cultural competence, social determinants of health, behavioral health integration, and interprofessional care coordination are encouraged to apply for scholarships reserved for RIT M.S. in Dietetics and Nutrition students in the AHEC Scholars Program. Selected students may apply their RIT Experiential Learning hours toward fellowship requirements. Benefits of participation include a financial stipend, access to current, research-based, non-clinical online learning materials, and more.
Health and Well-Being Management, MS

www.rit.edu/study/health-and-well-being-management-ms
Barbara Lohse, Professor
585-475-4208, balihst@rit.edu

Program overview

Individual and community health, disease prevention, and engaging in healthful habits to promote well-being are at the forefront of public interest. Health and wellness is a mosaic of nutrition, physical activity, stress management, and environmental features that are critical for a productive, efficient, and healthy society. Corporations, small businesses, government agencies, and institutions are employing health and well-being professionals to help people lead healthier lives and contribute to corporate, agency, and business productivity.

RIT’s Health and Wellness Degree

The MS in health and well-being management offers two options, both of which prepare you for a career in health and well-being program design, administration, and research. It is the perfect choice for those interested in going to medical or dental school or pursuing doctoral studies in nutrition, health promotion, exercise science, or public health.

To provide high-quality, population-based health care, the future health care workforce needs a skill set that includes the ability to:
- apply systems thinking,
- design interventions,
- practice dissemination and implementation science,
- engage with communities, and
- understand and utilize team dynamics, negotiation, and advocacy skills.

RIT’s health and wellness degree offers evidence-informed guidance to develop and apply these skills.

Choose From Two Options

The MS in health and well-being management offers two options, both of which prepare you for a career in health and well-being as well as offer research experiences for those interested in pursuing further doctoral and post-graduate studies.

- Content development, implementation, and evaluation focuses on helping students learn how to design and execute health and well-being programs, focusing on development of content and expertise in a particular area of health or wellness, such as exercise, behavior, and nutrition.
- Health and well-being program management relates to leading an organization’s health and wellness program or an employee assistance program within corporate setting or in self-employment venues.

Health and Wellness Degree: Educational Outcomes

1. Demonstrate skills in the design, delivery, and evaluation of individual and group interventions/programs that are consistent with evidence based social and behavioral theories. You will learn health education and program evaluation concepts, examine evidence and research-based content and apply learning behavior theory constructs to health and well-being activities.
2. Demonstrate the ability to assist with health, physical, nutrition, behavioral screenings or policy analysis to plan and manage a safe and effective health promotion program for both healthy and health-impaired individuals. You will acquire a knowledge base in nutrition, physical activity, and health law including screening and assessment and utilize this knowledge in health and well-being dissemination or implementation science activities.
3. Develop skills and experience necessary to promote program services to appropriate community recipients including the ability to categorize subsets of the worksite/organization population and identify appropriate intervention strategies for each subset. You will be able to describe and conduct needs assessments and apply findings appropriately. Also, you will demonstrate the acquisition of marketing concepts to a health and well-being problem.
4. Apply the requisite skills to plan and conduct inquiries into problems and outcomes used to develop and manage health and well-being activities, programs and campaigns. You will apply behavior change theory concepts and research and evaluation criteria to examine, critique, and assess health and well-being programs and activities.
5. Collaborate with multiple disciplines to promote and administer health related research, activities, and policy at the organizational, community, state, and federal level. You will develop verbal and written communication strategies and skills and apply them to tasks involving collaboration, interpretation, and critical thinking for health and well-being activities. Also, be well versed in health and well-being policy development and strategic application at multiple levels of governments and organizations.
6. Design and execute a comprehensive project or research-based inquiry relevant to the health promotion industry. You will integrate your learning in a research, inquiry, or review project on a topic pertinent to designing, planning, implementing, evaluating, managing, or marketing health and well-being.

Careers in Health and Wellness

The health and well-being management program prepares graduates for careers that provide services to enhance employee health and consequent workforce productivity, including:
- Administrator or manager of a health and well-being program/initiative for government, industry, or organizational entities.
- Health and well-being educator/communicator, instructional program designer, developer, or implementer.
- Preparation for future medical and dental education, doctoral training in fields related to nutrition, health promotion, exercise science, and public health.

### Application Details

To be considered for admission to the Health and Well-Being Management program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

### English Language Test Scores

- International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.
  - TOEFL: 79
  - IELTS: 6.5
  - PTE Academic: 56

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

### Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

### Additional Information

#### Prerequisites

Applicants must have completed an accredited college-level nutrition course with a B or better.
www.rit.edu/study/health-care-finance-adv-cert
Carla Stebbins, Senior Lecturer  
585-475-4761, casihst@rit.edu

Program overview
Health care employers need financial professionals who are well-versed in the unique intricacies of the health care industry. The advanced certificate in health care finance is ideal if you have an interest or background in finance and you’d like to work in health care.

Health Care Financial Certificate: Offered Exclusively Online

Designed for working professionals, this four-courses graduate-level credential will familiarize you with how the U.S. health care system is financed and the impact of efforts to reform. You will gain management skills that can be leveraged in both for-profit and not-for-profit health care organizations. The advanced certificate in health care finance is an ideal way for health care professionals to deepen their understanding of health care financial management. The four-course, 12 credit hour curriculum supports student's understanding of how the US health care system is financed, the impact of efforts to reform the system, as well as the development of financial management skills within for-profit and not-for-profit health care organizations. To meet the needs of working professionals, the certificate is offered exclusively online.

A Foundation for the MS Health Systems Management

With your advanced certificate in health care finance, the master of science in health systems management is within your reach. In this master’s degree you will build competencies in the five core areas key to success in health care management and leadership: (1) knowledge of health care systems in the U.S., (2) communications and interpersonal effectiveness, (3) critical thinking, analysis, and problem-solving skills, (4) management and leadership skills, and (5) professionalism and ethics theory and practice. The four courses that comprise the advanced certificate in health care finance will count towards this master's degree.

What is a Graduate Certificate?

A graduate certificate, also called an advanced certificate, is a selection of up to five graduate level courses in a particular area of study. It can serve as a stand-alone credential that provides expertise in a specific topic that enhances your professional knowledge base, or it can serve as the entry point to a master’s degree. Some students complete an advanced certificate and apply those credit hours later toward a master's degree.

Additional Information

Online Degree Information

The online Health Care Finance Advanced Certificate can only be completed part-time, taking one or two courses per term. The average time to completion is one year. All courses in the online Health Care Finance Advanced Certificate are offered asynchronously with the opportunity to participate in 1-2 synchronous class sessions with the course instructor.
For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

Online Tuition Eligibility
The online Health Care Finance Adv. Cert. is a designated online degree program that is billed at a 43% discount from our on-campus rate. View the current online tuition rate.

Health Systems Management, MS
www.rit.edu/study/health-systems-management-ms
Carla Stebbins, Senior Lecturer
585-475-4761, casihst@rit.edu

Program overview
A health systems management degree driven by today’s health care imperatives. Successfully managing strategy, finance, patient experience, and operations in the highly regulated and unique health care sector requires specialized competencies and expertise beyond a traditional MBA. The master of science in health systems management is the currency needed to advance and perform in health care systems today.

Critical success factors driving health care systems today are often referred to as the Quadruple Aim:
7. Improve the health of populations
8. Enhance the quality of care for individuals
9. Reduce the per capita cost of health care
10. Improve the work life of care providers

RIT’s Master’s of Health Care Management: An Industry-Focused Online Degree
Our health systems management degree is a graduate-level, applied, competency-based, and industry-focused online degree program. Students are provided the flexibility to pursue the degree part-time in 24-months or full-time in 12-months.

Unique to this degree, you will have the opportunity to attend two on-campus leadership immersions and a faculty-led travel experience to study another health care system. The faculty strive to blend the flexibility of online learning with the value of face-to-face networking, interaction, and travel. All courses use a case-based, dynamic, and interactive focus on key health care topics including economics and policy, health IT and decision support, ethics, systems quality, and organizational learning.

Business and leadership courses prepare you to tackle issues involving financial management, quality improvement, operations, and strategy formulation—all within the context of real-world health care trends and challenges. You’ll be well prepared to develop, direct, and implement strategy and tactics that will shape the health care organizations of the future.

Develop Your Health Care Leadership Skills
The MS in health systems administration program was built to support a set of professional competencies identified by the program’s advisory board, faculty, and alumni. These 12 competencies fall under five domains and support students for success in the field of management and leadership in health care:
- Knowledge of health sector
- Communications and interpersonal effectiveness
- Critical thinking, analysis, and problem-solving
- Management and leadership
- Professionalism and ethics

To develop your leadership skills, you will have the opportunity to attend two on-campus, hands-on, application-based learning and networking experiences. You will work closely with your classmates and faculty on case analysis, problem-solving, critical thinking, teamwork, and leadership skills during these four-day sessions. This face-to-face training delivers skills and competencies which will continue to be developed in a virtual environment within the online courses to maximize your return
on investment in skill development and practice. View the program’s Competency Model and Map.

**A Flexible Degree Built Around Your Schedule**
This online degree offers five start dates per year and courses run year-round. This accelerated course format allows you to complete your degree in half the time of a traditional, semester-based program. Each online course is seven weeks long. A full-time student can complete this degree in one year; a part-time student can complete the degree in 24 months.

**StackTrace Credentials**
You may earn a graduate-level credential and advance your career while you work toward your MS. The advanced certificate in health care finance stands alone, and may also be applied to your MS degree.

**Immersion Courses**
The program includes a three-course series, referred to as the immersion classes. Two of these courses are offered on the RIT campus over an extended weekend (approximately 45 hours in 4.5 days). These courses are highly interactive and designed in a workshop format that utilizes a variety of hands-on exercises, teamwork, and role-play. The focus of these courses is to build highly effective managers and leaders.

**An Immersive Health Systems Management Travel Experience**
One of the most distinguishing and attractive benefits of the health administration degree is the culminating travel course. During the final summer term, you will have the opportunity for a faculty-led travel experience in which you will conduct an intensive study of the locale’s health system in comparison to your native system. Travel destinations will include a mix of international and domestic locations. As your final project, you will use that experience to innovate a product, service, or process for a health care organization. There is an added program fee to participate in the travel course and students arrange their own flights, some meals, etc. The course faculty will share the destination and costs during the fall term prior to the summer course. For those unable to travel, an alternative study option will be provided.

**Top Health Care Faculty**
The program is led by a team of faculty who are practice-based scholars with extensive experience in the field. Faculty members are accessible, offer constructive feedback on course projects and assignments, and are at the forefront of providing an educational experience in which students can learn and directly apply classroom theories and concepts to the real-world practice of health care management.

**Careers in Health Systems Management**
Health care is the largest industry in the U.S. and the second largest employer, representing almost 20 percent of the Gross National Product, and employing more than 11 million people. Employment opportunities for health systems managers and administrators will increase by 20 percent over the next 10 years, according to the Bureau of Labor Statistics. View current career and salary information for health systems management program as they relate to career outcomes.

**Health Systems Administration Advisory Board**
The health systems administration MS degree relies on an advisory board of health administrators from around the country to advise and guide the program to ensure the curriculum addresses today’s most pressing challenges for health care leaders. Learn more about the role of the advisory board and view the current advisory board membership.

Learn more about the program’s mission, goals, and objectives.

**Program Completion Rates**
Graduation rates have risen year-over-year for the MS in health systems management degree program, and time-to-completion has decreased over a three-year period. RIT continues to track this data. Learn more about graduation rates and time to completion.

**Accreditation**
The master of science in health systems management is accredited by the Commission on Accreditation of Healthcare Management Education (CAHME). CAHME accreditation represents that a program has been reviewed and approved by its peers and found to meet a set of criteria that signal a robust commitment to high quality. It further demonstrates that a program has voluntarily committed to participate in a plan of continuous, self-improvement.

**What’s the Importance of CAHME Accreditation?**
CAHME’s mission is to advance the quality of health care management education. It is an organization that helps programs improve through peer and practitioner review. Attending a CAHMA-accredited program has significant professional benefits for you:

- Students are assured that a CAHME-accredited program meets the high standards and criteria defined by leading academics and practitioners.
- Graduating from a CAHME-accredited program enables you to better meet the changing demands of health management.
- Job opportunities abound, with many health care employers interviewing only those applicants who graduate from CAHME-accredited programs.

**Program Outcomes**
RIT’s MS in health systems management will help you advance your career in health care. Student outcomes data can be found on the CAHME page for the program.
Admission requirements

This program is available on-campus or online. The following admissions details apply to the on-campus program.

Offered Full-time
- Full-time Admit Term(s): Fall, Spring, or Summer Seminar on campus prior to completion
- Full-time Application Deadline: Rolling
- Full-time STEM Designated: No

Offered Part-time
- Part-time Admit Term(s): Fall, Spring, or Summer Seminar on campus prior to completion
- Part-time Application Deadline: Rolling
- Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Health Systems Management program, candidates must fulfill the following requirements:

• Complete an online graduate application.
• Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
• Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
• A recommended cumulative GPA of 3.0 (or equivalent).
• Submit a current resume.
• Submit a personal statement of educational objectives.
• Submit two letters of recommendation.
• Entrance exam requirements: None
• Writing samples are optional.
• Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

<table>
<thead>
<tr>
<th>Test</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOEFL</td>
<td>88</td>
</tr>
<tr>
<td>IELTS</td>
<td>6.5</td>
</tr>
<tr>
<td>PTE Academic</td>
<td>60</td>
</tr>
</tbody>
</table>

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Required Interview: Following the initial application review, candidates that move forward will be required to participate in a 30-minute Zoom interview with two program faculty. Results will be added to a review rubric and used to support or deny admission.

Assessment

Program faculty are committed to using a blend of assessments that address the three domains of learning (Bloom, et al., 1956): cognitive (knowledge), affective (growth in feelings or emotional areas/attitude/self), and psychomotor (manual or physical/skills). In response to the program’s mission to be “…responsive to employers, build on student’s prior experience, and accommodate the needs of advancing leaders,” the HSM faculty strive to use authentic assessments or those that reflect the nature of the work of a health care manager/leader and make a commitment to provide individualized feedback to support the learning of each student.

Academic Advising

Once the applicant reaches student status, the academic advisor for the program begins to work with the student. The student is enrolled in an advising community within RIT’s online learning management system. Within this community (referred to as “Advising Central”) the student is provided with a three-step orientation process that will result in a plan of study or degree plan and instructions on how to register for classes. The program’s academic advisor works one-on-one with students to navigate the program and satisfy all degree requirements.

Career Advising

The new student on-boarding process also involves working with the program career advisor. At minimum, students participate in three one-on-one career planning sessions through the degree program.

Online Degree Information

The Health Systems Management MS is offered part-time (24 months) or can be done through full-time study with permission of the Graduate Program Director (12 months). Ten of the required thirteen classes in the Health Systems Management MS program are offered asynchronously with the opportunity to participate in 1-2 synchronous class sessions with the course faculty. Note that this program includes two, week-long in-person immersions at RIT and an international travel course. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

Online Tuition Eligibility

The online Health Systems Management MS is a designated online degree program that is billed at a 43% discount from our on campus rate. View the current online tuition rate.
Medical Illustration, MFA

www.rit.edu/study/medical-illustration-mfa

James Perkins, Professor
585-475-2443, japfaa@rit.edu

Program overview

A medical illustrator is a professional artist with advanced education in the biomedical sciences, cutting edge digital media, and the principles of visual communication. RIT’s medical illustration degree is one of only five such programs in North America and the only program in the northeast. It combines training in human anatomy (with illustration students observing complete cadaver dissection in RIT’s Cadaver Lab), immunology, histology (the cellular structure of organs), and pathophysiology (the study of disease) with extensive training in 2D and 3D digital graphics, interactive media, and animation.

What is a Medical Illustrator?

Collaborating with scientists, physicians, and other health care professionals, medical illustrators translate complex scientific information into visual images that support medical education, science research, patient care, advertising, and litigation. Illustration projects are designed for use in print, projection, broadcast media, and distribution via the web and mobile devices.

RIT’s Medical Illustration Degree

This is a two-year, graduate-level medical illustration degree where you’ll earn a master of fine arts (MFA). The program emphasizes visual problem solving to determine the best approach to communicate a difficult concept. Students also gain real world experience by collaborating with medical researchers and observing live surgery in operating rooms. The program culminates with the production of a thesis project, which requires extensive background research and an original body of artwork on a complex medical topic.

Becoming a Medical Illustrator

Successful medical illustrators must possess exceptional illustration skills and artistic ability while also having in depth knowledge of the biological sciences in order to fully understand and effectively communicate complex medical information. In the MFA in medical illustration degree, you’ll accomplish the following outcomes:

- Demonstrate an advanced level of knowledge in the biomedical sciences
  - Demonstrate advanced knowledge of human anatomy, molecular biology, physiology, and related biomedical sciences
- Visualize scientific structures, processes, and concepts
- Visualize and accurately render anatomic, tissue, cellular, and molecular structures
- Illustrate physiological processes and abstract scientific concepts through visual storytelling

List instructional objectives to communicate biomedical content to a variety of target learners

- Identify the target learners (audience) for each set of instructional illustrations
- Describe the level of scientific literacy of each group of target learners
- Create a set of instructional objectives for each instructional illustration

Solve complex communication problems with appropriate application of verbal and visual content, realism, symbolism, graphic conventions, and motion or interactive media.

- Select the most appropriate medium for delivery of content to target learners
- Select appropriate level of realism, symbolism, and graphic conventions for optimal delivery of instructional objectives to target learners

Utilize a variety of media and production techniques in appropriate applications and understand production processes sufficiently to communicate with pre-press companies, art directors, etc.

- Create artwork in a variety of media
- Select the appropriate dimensions, color space, resolution, file format, and other criteria for delivery to client
- Use industry standard terminology when discussing production and output processes

Communicate effectively with clients, subject matter experts, co-workers, supervisors, and vendors in oral and written form

- Use correct anatomic and medical terminology when discussing scientific content

Demonstrate knowledge of professional and ethical conduct

- Describe HIPAA regulations regarding the use of patient information
- Follow operating room protocols at affiliated hospitals
- Describe US and international copyright laws and how they apply to the use of reference materials
- Describe copyright infringement and the criteria for determining Fair Use

Demonstrate awareness of established business and management practices

- Describe standard employment practices in the profession
- Describe business models and taxation of independent illustrator
- Describe pricing strategies and calculate prices for illustration projects
- Create a personal identity package and marketing materials
- Generate sample contracts, licensing agreements, and invoices

Demonstrate competency in the academic research process through a graduate research project or thesis

- Conduct background research on a proposed biomedical topic
- Develop a set of instructional objectives to deliver the topic to a specific group of target learners
- Create a body of artwork to meet the instructional objectives
- Exhibit the body of work during one of the thesis shows or at a screening of digital media productions
- Complete a written thesis paper summarizing the project

Medical Illustrator Jobs

Graduates of RIT’s medical illustration degree find employment with hospitals, medical schools, research centers, museums, medical publishers, advertising agencies, web design firms, animation studios, law firms, and a variety of other creative agencies. Since the MFA is considered the terminal degree in the arts, graduates may also teach in academic institutions or in a wide range of computer graphics, scientific illustration, or art programs. Organizations that employ our graduates include:

- Science magazine (American Association for the Advancement of Science)
- Department of Neurobiology and Anatomy, University of Rochester Medical Center
- New England Journal of Medicine
- Roswell Park Cancer Center, Buffalo, NY
- MIT Center for Biomedical Innovation
- Cell Press (publishers of Cell and other scientific journals)
- Nucleus Global (medical communications)
- Custom Learning Designs (pharmaceutical advertising)
College of Health Sciences and Technology

- The Presentation Group (courtroom graphics)
- Bryan Christie Design (pharmaceutical advertising)
- Emmi Solutions (web and interactive media)
- Cleveland Institute of Art (scientific illustration program)
- Illustrated Verdict (courtroom graphics)
- National Capital Area Medical Simulation Lab, Uniformed Services University of the Health Sciences (developing virtual surgical simulators)
- Visible Body/Argosy Medical Publishing (medical publishing and interactive media)
- Department of Imaging Sciences, University of Rochester Medical Center
- Smithsonian National Museum of Natural History
- Springer Healthcare Communications (medical publishing)
- Legal Art Works (courtroom graphics)

Experiential Learning

Cooperative Education and Internships
What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

In the College of Art and Design experiential learning includes cooperative education and internships, international experiences, multidisciplinary projects, industry partnerships, and more. Participating in these opportunities is not only possible at RIT, but passionately encouraged.

Cooperative education, internships, and other experiential learning opportunities are optional but strongly encouraged for graduate students in the MFA in medical illustration.

Any graduate studio course offered in the College of Art and Design

Admission requirements

This program is available on-campus only.

Offered Full-time
- Full-time Admit Term(s): Fall
- Full-time Application Deadline: February 1 priority deadline, rolling thereafter
- Full-time STEM Designated: No

Offered Part-time
- Part-time Admit Term(s): Fall
- Part-time Application Deadline: Rolling
- Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Medical Illustration program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 79
- IELTS: 6.5
- PTE Academic: 56

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.
Additional Information

Prerequisites
Applicants must have one year of general or introductory biology (for biology majors), and a minimum of three advanced biology courses, such as vertebrate anatomy, physiology, neurobiology, cell biology, molecular biology, immunology, microbiology, genetics, developmental biology, or pathology.

The School of Individualized Study is about the individual students’ ideas, interests and goals. Through the school, students can combine multiple disciplines to create a singular master’s degree program, the MS in professional studies. The school also offers an advanced certificate in project management.

Please visit the college's website—www.rit.edu/sois—for in depth information on academics, faculty, facilities, research initiatives, advising, and more.

**Admission requirements**
Each college or degree-granting entity makes all decisions regarding graduate admission. Please refer to the individual program descriptions for information regarding specific admission criteria. For general graduate admission information, please refer to the Admission section of this bulletin.

**Financial aid and scholarship**
Please refer to the Financial Aid and Scholarship section of this bulletin for information regarding financial aid, scholarships, grants, loans, and graduate assistantships.
Professional Studies, MS

www.rit.edu/study/professional-studies-ms

Peter Boyd, Senior Lecturer
585-475-6320, plbcms@rit.edu

Program overview

RIT's master's in professional studies enables you to create an individualized plan of study tailored around your personal and professional goals. The degree offers you the opportunity to draw upon graduate courses from more than 50 of RIT's master's degree to gain the advanced knowledge and skills necessary to respond successfully to new and emerging career opportunities.

What Can I Do with a Degree in Individualized Studies?

In short, anything you want. The World Economic Forum recommends that to prepare for the jobs of the future, workers must possess a broad, multidisciplinary skill set. RIT offers a wide variety of fields of study to combine for your customized degree. Your advisor will help customize your plan of study based upon your experience, interests, and academic and career goals.

An individualized studies degree is the freedom to craft a master's degree around your interests, career goals, and professional aspirations. You'll work with dedicated, professional academic advisors that will help you develop a plan of study around the topics that interest you most. And your plan of study will be crafted toward the professional goals you set. You'll choose two to three concentration areas, that consist of four to five courses each, in topics that will provide you with the skills you need to further your career or launch a new professional endeavor.

RIT's Master's in Professional Studies: On-Campus and Online

The master of science in professional studies degree is unique in that you will pursue two to three strategic areas of study, also known as concentrations, with faculty distinguished in those specialized fields. You'll take courses along with other students who may be majoring in those subjects. You'll get the benefit of acquiring substantial knowledge in multiple areas within one degree. The professional studies degree can be completed on campus or online, and through full- or part-time study.

You’ll begin your studies with Contexts and Trends, the program’s foundation course. You’ll explore your professional career objectives and research RIT’s portfolio of graduate programs to identify courses that best match your professional and personal goals.

Once you decide upon the areas you want to study you’ll create two or three concentrations. These concentrations make up the required course work for the degree program. Each concentration is a selection of courses drawn from existing RIT graduate programs. Credit hours not required to fulfill a concentration area may be used as electives. All electives and transferred graduate courses need to be integrated into the proposed plan of study. With certain concentrations, the degree may be completed entirely through online learning.

Here's just a sampling of the concentrations you may choose:

- Applied Statistics
- Business Analytics
- Business Management
- Communication and Digital Media
- Computer Science
- Cybersecurity
- Data Analytics
- Design Thinking
- Environmental, Health and Safety Management
- Finance
- Health Informatics
- Health Systems Administration
- Human Computer Interaction
- Human Resource Development
- Industrial and Systems Engineering
- Information Sciences and Technology
- Lean Six Sigma
- Manufacturing Leadership
- Marketing
- Product Development
- Project Management
- Service Leadership and Innovation
- Supply Chain Management
- User Experience Design

This individualized studies degree also includes a capstone project. This is an applied, hands-on project directly related to your customized plan of study.

Additional Information

Using edX MicroMasters Credit

Applicants interested in leveraging their edX MicroMasters for credit, should send their edX MicroMasters program record to RIT using these instructions and we will add the credential to their application for review.

Online Degree Information

The online Professional Studies MS includes courses that are a blend of synchronous and asynchronous classes. Full-time students can take 3 to 4 courses each semester, allowing them to graduate in 1.5 years. Part-time students usually take one or two courses each semester and can graduate in 2.5 years. Students typically spend 10-12 hours per week per class, depending on the content and their background knowledge. For specific details about available concentration areas, delivery format and learning experience, or edX MicroMasters credit, contact the Program Contact listed on this page. The program culminates with a capstone project. RIT does not offer student visas for online study.

Online Tuition Eligibility

The online Professional Studies MS is a designated online degree program that is billed at a 43% discount from our on-campus rate. View the current online tuition rate.
Program overview

In today’s business-oriented society, project-based organizations and project management have become much more than just a way of conducting business. New growth within these organizations has changed the shape of project management to reveal what is becoming an exciting new career path for many individuals. The advanced certificate in project management will prepare you to effectively manage projects by successfully planning, organizing, and executing specific projects or one-time efforts.

Why Study Project Management?

Project managers have quickly become a necessary asset for many businesses. Encountering the challenges of cultural and social differences, along with an assortment of industrial focuses, a project manager must be aware of a project’s goals on a daily and, sometimes, hourly basis. The advanced certificate in project management is a graduate-level credential designed to provide you with the in-depth knowledge and skills to be a successful project manager in any industry. Designed for working professionals and part-time study, in this program you will develop the leadership skills needed to effectively manage a team and achieve your project objectives. This graduate credential follows industry project management standards.

Project Management Courses

The advanced certificate in project management consists of three core courses and one elective. Courses cover the fundamentals of project management as well as agile leadership and design thinking. The certificate can be completed entirely online, on campus, or through a combination of both options. Over four courses, you will learn:

- The tools and techniques to manage the comprehensive project management life cycle for a project, from initiation through closing
- How to balance the critical tradeoffs of time, cost, and scope to meet customer expectations
- How to lead a project to success, and how to capitalize on the leadership and behavioral facets to do so
- How to navigate the social and cultural aspects, legal, and regulatory practices, technology, and infrastructure

RIT’s School of Individualized Study is a Project Management Institute (PMI) Authorized Training Partner.

What is a Graduate Certificate?

A graduate certificate, also called an advanced certificate, is a selection of up to five graduate level courses in a particular area of study. It can serve as a stand-alone credential that provides expertise in a specific topic that enhances your professional knowledge base, or it can serve as the entry point to a master’s degree. Some students complete an advanced certificate and apply those credit hours later toward a master’s degree.
School of Individualized Study

- Submit 1 letter of recommendation.
- Entrance exam requirements: None
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores
International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 79
- IELTS: 6.5
- PTE Academic: 56

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant's need for additional English language courses.

Cost and Financial Aid
An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Using edX MicroMasters Credit
If you are leveraging edX MicroMasters for credit, please send your edX MicroMasters program record to RIT using these instructions and we will add the credential to your application for review.

Online Degree Information
The online Project Management Advanced Certificate can only be completed part-time, taking one or two courses per term. The average time to completion is one year. Delivery is a blend of asynchronous and synchronous study, and your academic advisor will work with you to select courses that meet your degree requirements and your schedule. Students typically spend 10-12 hours per week per class, depending on the content and their background knowledge. A successfully completed Project Management Advanced Certificate can be "stacked" and will award 12 credits toward our Professional Studies MS and Construction Management MS. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

Online Tuition Eligibility
The online Project Management Adv. Cert. is a designated online degree program that is billed at a 43% discount from our on campus rate. View the current online tuition rate.

Project Management, MS
www.rit.edu/study/project-management-ms
Leonie Fernandes, Senior Lecturer
1-315-316-1965, lxfbbu@rit.edu

Program overview
Project managers are critical resources to achieve innovation, strategic goals and deliver products and services to clients. The complexity, scale, and diversity of organizations globally requires leaders that can translate vision into practice while adapting to the changing needs of markets and clients.

Project management is like no other career in that it synthesizes leadership, industry, business, and technical skills in unique and changing environments to deliver products or services. You will learn how to integrate the practical aspects of project management into real-world projects. The project management master's degree program focuses on the practical application of project management in a variety of organizations, industries, and product/service types. You will learn how project management is adapted to each unique project, organization, and client to deliver the greatest value and results. The project management master's degree program focuses on effective leadership skills including the ability to create an environment of confidence among and between teams and clients.

RIT’s Project Management Master’s Degree: On-Campus or Online
In the project management master's degree, you will develop the skills needed to effectively manage projects of varying scale and complexity by:

- Gaining advanced knowledge of project management skills and techniques to achieve the greatest impact and innovation for your project and organization. You will accomplish this by learning to: Compare and contrast project management methods and tools. Apply effective project management techniques to various scenarios. Develop and utilize leadership skills in project environments and global settings. Critical to leading multiple teams are the development of skills in: Identifying leadership skills that can traverse team, executive, and client environments. Determining successful project environment characteristics and best practices.

- Develop and utilize leadership skills in project environments and global settings. Critical to leading multiple teams are the development of skills in: Identifying leadership skills that can traverse team, executive, and client environments. Determining successful project environment characteristics and best practices.

Project Management Courses
In RIT’s project management master’s you will gain knowledge in project management skills and leadership. Core courses cover project management methods and frameworks including predictive, agile, and hybrid. The program can be customized and tailored to focus on specific industries, technologies, businesses, or science disciplines. You’ll complete the degree with a capstone experience in which you will analyze an organizational scenario, challenge, or problem and prepare a solution based on your course work and experience in project management.

Admission requirements

This program is available on-campus or online. The following admissions details apply to the on-campus program.

Offered Part-time
Part-time Admit Term(s): Fall
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Part-time study is 1-8 semester credit hours. RIT will not issue a student visa for advanced certificates.
Application Details

To be considered for admission to the Workplace Learning and Instruction program, candidates must fulfill the following requirements:

• Complete an online graduate application.
• Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
• Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
• A recommended minimum cumulative GPA of 3.0 (or equivalent).
• Submit a current resume or curriculum vitae.
• Submit a personal statement of educational objectives.
• Submit two letters of recommendation.
• Entrance exam requirements: None
• Writing samples are optional.
• Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

<table>
<thead>
<tr>
<th>Test</th>
<th>Minimum Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOEFL</td>
<td>88</td>
</tr>
<tr>
<td>IELTS</td>
<td>6.5</td>
</tr>
<tr>
<td>PTE Academic</td>
<td>60</td>
</tr>
</tbody>
</table>

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.
School of Individualized Study

Faculty

**Peter Boyd**, BA, Nazareth College; MA, Columbia University—Graduate Program Coordinator; Senior Lecturer

**James Hall**, BA, Wilfrid Laurier University (Canada); MTS, Waterloo Lutheran Seminary (Canada); MA, Ph.D., University of Iowa—Executive Director; Professor

**Stephen Aldersley**, BS, University of Surrey (United Kingdom); MS, University of Lancaster (United Kingdom); Graduate Education Certificate, St. Martin’s College (United Kingdom); MS, College of St. Rose; Ed.D., University of Rochester—Professor

**Leonie Fernandes**, BS, University of Michigan; MS, Rochester Institute of Technology; PMI—Project Management Coordinator; Senior Lecturer

**Clarence Sheffield**, BS, University of Utah; MA, University of Colorado at Boulder; Ph.D., Bryn Mawr College—Professor

**David P. Wick**, BS, MS, Ph.D., Clarkson University—Associate Professor
The College of Liberal Arts offers master of science degrees in a range of disciplines. Elective graduate courses complement the professional emphasis of our degree programs by exploring the broader knowledge and social implications embodied in these areas of study. By providing this humanistic perspective, these courses play an integral role in professional education, making a direct and distinct contribution to the student’s preparation for a specialized career. The college also provides a number of graduate courses that serve as electives for graduate degree programs offered by other RIT colleges.

Please visit the college’s website—www.rit.edu/liberalarts—for in-depth information on academics, faculty, facilities, research initiatives, advising, and more.

**Admission requirements**
Each college makes all decisions regarding graduate admission. Please refer to the individual program descriptions for information regarding specific admission criteria. For general graduate admission information, please refer to the Admission section of this bulletin.

**Financial aid and scholarships**
Please refer to the Financial Aid and Scholarship section of this bulletin for information regarding financial aid, scholarships, grants, loans, and graduate assistantships.
Communication, MS
www.rit.edu/study/communication-ms  
Eun Sook Kwon, Associate Professor  
585-475-5209, exkgpt@rit.edu

Program overview
Communication in all its forms is at the center of our personal lives and professional careers. Whether it’s interpersonal or mediated communication, professional communicators need to know how to develop creative and impactful messaging to successfully engage their audiences.

Technology has changed everything about the field of communication. Social media platforms like Twitter, Instagram, and Facebook are the first places people go to get breaking news. Retargeting ads, geofencing, and native advertising are influencing how to reach and connect with audiences. Add in the proliferation of big data and marketing coordinators, brand managers, and marketing executives now have access to information that impacts real-time decision-making around creative messaging, audience tracking, and the impact of an organization’s marketing investment.

The best communication master’s will prepare you to leverage the latest in tech in the dynamic and ever-changing field of communication.

RIT’s communication master’s degree hosts an innovative curriculum that is grounded in today’s social sciences and humanities concepts and applications. You’ll engage with our diverse and dynamic faculty of accomplished communication researchers and practitioners, who will teach you how to research a communication challenge, create compelling messages, and analyze media content and audience engagement.

RIT’s Communication MS

With communication courses spanning artificial intelligence, digital storytelling, digital advertising, social media analytics, and strategic communication, RIT’s communication master’s prepares you to excel in the ever-changing fields of communication, public relations, marketing, and branding. You’ll learn how to leverage technology to reach and engage audiences, craft compelling messages that stand out, analyze media content, and understand how analytics and big data drive smart decision-making. You’ll become an effective content vendor, or marketing manager; social media strategist; or PR/communication officer who can deliver the results an organization is looking for. If pursuing a doctoral degree is a future career aspiration, RIT’s program will help you grow into an accomplished researcher as you develop an in-depth understanding of the communication field.

Why Get Your Communication MS from RIT?

RIT is known for creativity and innovation. In fact, U.S. News & World Report ranked RIT 50th on the list of “Most Innovative Schools” for 2021. What does this mean for you as a communication professional?

It means unprecedented access to vast resources in technology and innovation that can only be found at RIT. Diverse and dynamic faculty, comprised of accomplished communication researchers and practitioners, adds depth and real-world insight to your courses. Access to classes from across the university allows you to differentiate yourself by pairing your communication master’s degree with elective courses in marketing, analytics, information technology, new media, management, design thinking, data analytics, and more. Smart classrooms, makerspaces, and an entrepreneurial ecosystem are designed for you to connect, share, and develop your ideas. All of this is designed for you to have an outstanding academic experience through hands-on learning and real-world application of knowledge. You’ll graduate with a degree and the experience needed to stand out in a competitive job market.

Jobs in Communications

According to the U.S. Bureau of Labor Statistics, jobs in communication fields are expected to grow by seven percent over the next ten years. Communications professionals with graduate degrees earn an average salary of $86,433.

Types of jobs in communication vary depending on what kind of work interests you most. Graduates of RIT’s communication master’s degree hold positions as:

- Marketing Specialist
- Communication Coordinator
- Account Coordinator
- Communication Assistant
- Digital Marketing and Communication Analyst
- Social Media Manager
- Digital Marketing Specialist
- Customer Sales Director
- Marketing Analyst
- Technical Writer

Relevant, Future-Focused Research

The communication MS offers research opportunities in timely, urgent areas affecting today’s communication and marketing professionals, including the use of artificial intelligence in journalism, social media, visual communication, health communication, and civic engagement.

Experiential Learning

Cooperative Education and Internships

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Co-ops and internships take your knowledge and turn it into know-how. A liberal arts co-op provides hands-on experience that enables you to apply your knowledge in professional settings while you make valuable connections between course work and real-world applications.

Cooperative education is strongly encouraged for graduate students in the communication master’s degree.

Criminal Justice, MS

www.rit.edu/study/criminal-justice-ms
Jason Scott, Associate Professor
585-475-2393, jxsgcj@rit.edu

Program overview

RIT’s criminal justice master’s degree fosters the creation of new knowledge through active research in agencies and the community. You will learn and apply problem-solving skills rooted in areas of individual interest with an emphasis on applied research. The degree enables graduates to enter successful careers in criminal justice agencies, policy analysis, or pursue further education in a criminal justice doctoral program.

The MS in criminal justice emphasizes a multidisciplinary approach to urban studies with a focus on public safety. The program stresses training in policy analysis and practice, particularly as it is relevant to the community and urban issues.

The master’s degree in criminal justice builds on a foundation of locally relevant policy research by providing you with the critical skills to carry out such work and the experience to assure success in employment or in pursuit of further graduate studies. RIT’s criminal justice master’s program provides you with a strong foundation in criminological, criminal justice theory, and social science research skills, enabling you to have a successful career in the policy analysis arena or to be prepared to pursue advanced study beyond the master’s degree.

Recent criminal justice ms graduates have entered careers in prosecutorial investigation, criminal justice program evaluation, and crime analysis. Many have also pursued law degrees and doctoral degrees.

Students applying to the program should have a strong undergraduate foundation in criminology and research methods. Students that do not possess these skills may be required to complete additional undergraduate course work (e.g., Criminology, Theories of Crime, and Research Methods) or demonstrate equivalent skills for completion of the degree.

Experiential Learning

www.rit.edu/study/engineering-psychology-adv-cert

Esa Rantanen, Associate Professor
585-475-4412, emrgsh@rit.edu

Program overview

Engineering psychology focuses on exploring and understanding the relationship between humans and machines. It's the science of human behavior and our interactions with the technologies that go into the design and operation of machines, equipment, and more.

An Innovative Engineering Psychology Program

The advanced certificate in engineering psychology will expand your core knowledge of engineering psychology by exploring course work in cognition, perception, ergonomics, industrial design, and more. The advanced certificate provides you with formal recognition of your knowledge in engineering psychology and establishes a credential for seeking a career in the human factors or ergonomics fields. Students enrolled in the MS degree in experimental psychology may be awarded the advanced certificate by taking the certificate's required courses as part of their master's program.

What is a Graduate Certificate?

A graduate certificate, also called an advanced certificate, is a selection of up to five graduate-level courses in a particular area of study. It can serve as a stand-alone credential that provides expertise in a specific topic that enhances your professional knowledge base, or it can serve as the entry point to a master's degree. Some students complete an advanced certificate and apply those credit hours later toward a master's degree.

Experimental Psychology, MS

Program overview

The experimental psychology master’s degree is a broad and flexible program that provides a solid stepping-stone into careers or further study in psychology. A choice of tracks—experimental psychology or engineering psychology—allows you to customize the program around your career goals and aspirations.

What is Experimental Psychology?

In experimental psychology, students are trained to apply scientific methods to basic psychological processes in perception, brain and behavior relationships, thinking, memory, learning, social interactions, human development, and related areas. RIT’s master’s in experimental psychology builds on the strengths of faculty research and student interests in experimental psychology broadly defined. The program as a whole provides a foundation for further advanced academic study in human factors and/or experimental psychology.

Master’s in Experimental Psychology Courses

The experimental psychology master’s degree includes core courses, elective courses, and a thesis. It also offers two tracks to choose from: experimental psychology and engineering psychology.

The experimental psychology track embraces the application of the scientific method to the study of behavior. Faculty are experts in a variety of fields including addiction, attention, cognition, development, evolutionary psychology, forensic psychology, perception, psychopathology, and social psychology, among others.

The engineering psychology track examines human capabilities to sense, perceive, store, and process information and how these human factors impact interactions with technology. This knowledge is applied to the design, use, and maintenance of human-machine systems. Courses emphasize the role of human behavior and performance in both simple and complex human-machine systems. Students are trained in both research methods of experimental psychology and the application of the results to contemporary problems in industry. This track prepares students to function as effective engineering psychologists in industrial, governmental, or consulting organizations.

Electives: If you choose the engineering psychology track must select two electives. Any graduate course at RIT can be taken as an elective, assuming prerequisites are met.

Capstone or Thesis: As part of the MS in experimental psychology, you will choose either a capstone project or a thesis. Students who select the capstone project will embark on a range of projects to demonstrate their ability to apply this knowledge in various assignments. A variety of written projects (white paper, focused literature review, and a resume) and an oral presentation are required for students to show proficiency in their areas of expertise.

Students who select to complete a thesis will select a thesis adviser in the first year, followed in the second year by a thesis topic and research proposal. Students will conduct their thesis, including the collection and analysis of data, in the second year. Ongoing research activity is expected through the summer term of the program. At the completion of the thesis, students will publicly present their findings and defend their research before a thesis committee.

Experiential Learning

Cooperative Education and Internships

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships provide you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Co-ops take your knowledge and turn it into know-how. A liberal arts co-op provides hands-on experience that enables you to apply your knowledge in professional settings while you make valuable connections between course work and real-world applications.

The experimental psychology master’s degree includes an optional cooperative education component. Co-op is generally completed in the summer after the first year of the program. The co-op experience provides experiential learning that integrates with classroom education and allows students to apply psychological principles to problems in a variety of work environments. Co-op may be completed in any business or industrial setting.

Admission requirements

This program is available on-campus only.

Offered Full-time

Full-time Admit Term(s): Fall or Spring

Full-time Application Deadline: Fall - February 15 priority deadline, rolling thereafter; Spring - rolling

Full-time STEM Designated: Yes

Offered Part-time

Part-time Admit Term(s): Fall or Spring

Part-time Application Deadline: Rolling

Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Experimental Psychology program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: GRE required. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

TOEFL: 79
IELTS: 6.5
PTE Academic: 56

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Prerequisites

Applicants should have completed at least 15 semester hours of coursework in undergraduate psychology or a related field (e.g., engineering, computer science, information technology), including one course in experimental psychology and one course in statistics.
Science, Technology and Public Policy, MS

www.rit.edu/study/science-technology-and-public-policy-ms

Eric Hittinger, Associate Professor
eshgpt@rit.edu

Program overview

A Technical Master’s in Public Policy For Today’s Innovative World

Self-driving cars, cybersecurity threats, data protection and privacy, and artificial intelligence are just a few of the hot button topics in the rapidly evolving intersection of technology, innovation, and public policy. This master’s in public policy enables you to work at the intersection of engineering, science, and technology while contributing to important policy issues in the private, public, and not-for-profit sectors. Understanding how to create effective public policy takes both an awareness of the science and technology behind a topic as well as a grounding in the system of laws, regulatory measures, and courses of action that affect it.

RIT’s Science, Technology, and Public Policy MS

With a focus on policy areas that have a strong science or technology element (energy, health systems, technology innovation, environment, and cybersecurity), our program builds on RIT’s strengths as a technological university and connects you with faculty and researchers who are actively working on scientific and technological innovations that drive new public policy needs.

The science, technology, and public policy MS is equally ideal for those with undergraduate degrees in either:
- a science or engineering, who seek to broaden their career opportunities in government or business settings, or
- an area of liberal arts (e.g., economics, public policy), who are interested in pursuing an interest in science, technology and policy issues.

Courses in Technology and Public Policy

Public policy core courses emphasize analysis, problem-solving, and interdisciplinary approaches which are required in this program.

Elective courses are selected with an advisor and allow you to focus studies in an interest or career area, such as environmental policy, climate change policy, health care policy, STEM education policy, telecommunications policy, biotechnology policy, environmental policy, communications policy, or energy policy. Electives are offered in various colleges throughout the university, including the colleges of Business, Engineering, Engineering Technology, and Science.

In the thesis and capstone options, you will work with a faculty adviser on an independent research project in your area of interest.

Experiential Learning

Cooperative Education and Internships

What makes an RIT education exceptional? It's the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next hires.

Co-ops and internships take your knowledge and turn it into know-how. A liberal arts co-op provides hands-on experience that enables you to apply your knowledge in professional settings while you make valuable connections between course work and real-world applications.

Co-ops and internships are optional but strongly encouraged for graduate students in the MS in science, technology, and public policy.

Kaitlin Stack Whitney, BS, Cornell University; Ph.D., University of Wisconsin-Madison—Assistant Professor

Kristoffer J. Whitney, BS, Rochester Institute of Technology; Ph.D., University of Pennsylvania—Associate Professor
The National Technical Institute for the Deaf is one of the nine colleges of Rochester Institute of Technology, and is home to the world’s first and largest technological college for deaf and hard-of-hearing students. RIT/NTID serves more than 1,100 deaf and hard-of-hearing students from across the United States and the world.

Please visit the college’s website—rit.edu/ntid—for in depth information on academics, faculty, facilities, research initiatives, advising, and more.

**Admission requirements**

Each college makes all decisions regarding graduate admission. Please refer to the individual program descriptions for information regarding specific admission criteria. For general graduate admission information, please refer to the Admission section of this bulletin.

**Programs of Study**

- Health Care Interpretation MS 169
- Secondary Education of Students Who Are Deaf or Hard of Hearing MS 170

Online learning option available.
Health Care Interpretation, MS

www.rit.edu/study/health-care-interpretation-ms
Jeni Rodrigues, Assistant Professor
585-975-9353, Jeni.Rodrigues@rit.edu

Program overview

The MS in health care interpretation is designed to meet the demands of nationally certified sign language interpreters desiring a master’s degree specific to working in health care environments. Demand for interpreters is expected to grow 18% over the next ten years, more than three times the rate of the overall job market. Health care is the second highest-demand industry for interpreting jobs.

What is an ASL Medical Interpreter?

For the average person, medical terminology and understanding the diagnosis and treatment of medical conditions and disease can be confusing and challenging. People who are deaf or hard of hearing have the additional complication of a language barrier. An ASL (American Sign Language) medical interpreter works in a range of health care settings to help patients and doctors communicate effectively. An ASL medical interpreter can assist a patient in clearly expressing their symptoms and health concerns to a doctor or nurse, and interpret complex medical terminology used by doctors and nurses to diagnose and treat the patient.

RIT/NTID’s Master’s in ASL Medical Interpretation: Offered Exclusively Online

RIT’s National Technical Institute for the Deaf’s Department of American Sign Language and Interpreting Education administers the program, with some course work contributed by RIT’s College of Health Sciences and Technology. This unique program:

• Meets the growing demand for specialized sign language health care interpreters as more deaf and hard-of-hearing professionals enter medical/health care fields.
• Increases the number of specialized sign language interpreters working in patient health care settings.
• Prepares interpreters to work in leadership roles in the health care interpreting field.

The program begins with a seminar course designed to establish the theoretical parameters students are expected to follow in case analysis, to establish a framework for conducting online discussions in safe and confidential ways, and to create connections among classmates that build trust and rapport. This initial connection promotes student engagement in the reflection-based components of the program. The curriculum employs an online pedagogical approach, including accelerated courses as its primary delivery system. Each course will require an estimated 9-12 hours per week for class assignments, and course materials will be delivered asynchronously. In the final semester, students will complete a capstone course consisting of a research paper or a project. The program is currently offered part-time for two academic years (with two summers).

Admission requirements

This program is available on-campus or online. The following admissions details apply to the on-campus program.

Offered Part-time

Part-time Admit Term(s): Summer
Part-time Application Deadline: April 1, rolling thereafter
Part-time STEM Designated: No
Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Health Care Interpretation program, candidates must fulfill the following requirements:

• Complete an online graduate application.
• Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
• Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
• A recommended minimum cumulative GPA of 3.0 (or equivalent).
• Submit a current resume or curriculum vitae.
• Submit a personal statement of educational objectives.
• Submit two letters of recommendation.
• Entrance exam requirements: None
• Letters of recommendation should come from interpreter colleagues, mentors, or Deaf community members who have had the opportunity to observe the applicant’s interpreting work.
• Submit current national ASL/English certification, Board for Evaluation of Interpreters (BEI), or state licensure. Applicants must email a copy of their credentials to the NTID Office of Admissions at ntidadmissions@ntid.rit.edu.
• Submit an ASL interpretation sample.
• Submit an audiogram (applies to Deaf and hard-of-hearing applicants).
• Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores
International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

<table>
<thead>
<tr>
<th>Test</th>
<th>Minimum Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOEFL</td>
<td>0</td>
</tr>
<tr>
<td>IELTS</td>
<td>0.0</td>
</tr>
<tr>
<td>PTE Academic</td>
<td>0</td>
</tr>
</tbody>
</table>

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid
An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. Because RIT receives federal support, students in the Health Care Interpretation MS program pay less than RIT’s regular tuition rate. View the Deaf and Hard-of-Hearing and Hearing NTID-Supported Students tuition section in cost of attendance.

A combination of sources can help fund your graduate degree. Learn how to fund your degree

Additional Information
Medical Terminology Course Requirement
Applicants accepted into the program must complete The Language of Medicine, a self-paced online course in medical terminology, before the beginning of the summer term. Acceptance materials will include instructions for accessing the course.

Secondary Education of Students Who Are Deaf or Hard of Hearing, MS

www.rit.edu/study/secondary-education-students-who-are-deaf-or-hard-hearing-ms
Patrick Graham, Associate Professor
pjgnmp@rit.edu

Program overview
The master of science degree in secondary education of students who are deaf or hard of hearing is designed for deaf, hard-of-hearing, and hearing students with a passion for teaching. As a teacher-candidate in the program, you'll earn dual certification to teach a secondary school content area for students who are hearing or deaf as well as in deaf education for grades K-12. The curriculum is taught by renowned faculty at RIT, one of the most innovative campuses in the world. The program prepares teachers to be effective and ethical practitioners and also to be scholars and leaders in the profession.

As a graduate student in the program, you will enjoy small class sizes, one-to-one discussions, and advisement with world-renowned faculty in small classes that allow you to build your strengths and develop your skills.

RIT's Deaf Education Degree
RIT and the National Technical Institute for the Deaf (NTID) have created a unique educational community with a diverse communication environment. All community members share responsibility for effective communication and are expected to respect the language preferences of students, faculty, and staff. The rich inclusive communication environment at RIT/NTID prepares you for the broad array of communication styles you will encounter in the classroom as a teacher of the deaf.

Faculty members are international leaders in research and are highly skilled in the education of deaf people. A carefully designed system of faculty advisement is a prominent feature of the program. On-campus facilities, state-of-the-art technology, and a well-established system of educational access services combine to make this a vital program for both deaf and hearing students who desire careers as professional educators of deaf students.

How to Become a Teacher for the Deaf
Course work requires a minimum of five semesters. A cumulative grade point average of at least 3.0 must be maintained. Before graduation, students are expected to have at least intermediate-level signing skills as determined by a Sign Language Proficiency Interview.

Degree and Certification
When you successfully complete the program, you will have earned:
- A master of science degree
- Initial Certification from New York State to teach in an academic subject area at the secondary school level (grades 7-12). Subject areas include biology, chemistry, earth science, English, math, physics, social studies, or American Sign Language
- Initial certification from New York State in education of students who are deaf or hard of hearing, grades K-12
- Initial certification from Council on Education of the Deaf Note: To be eligible for initial certification, you are required to take and pass the New York State Teacher Certification Examinations (NYSTCE). There are four tests: Educating All Students (EAS)Content Specialty Test (CST), Deaf and Hard of Hearing Content Specialty Test (CST), in the academic subject area for which you wish to become certified to teach.
- edTPA (Teacher Performance Assessment)
Is the RIT/NTID’s Deaf Education Degree right for you?

How do you know if the MS degree in secondary education is the right program for you? Use the following questions to assess your interest in the education field and in teaching students who are deaf and hard of hearing:
- Do you want to teach deaf and hard-of-hearing students?
- Do you want to teach math, science, social studies, or English and respond to the need for more high school teachers?
- Do you want to teach in a variety of K-12 mainstream and residential/center school settings?
- Are you fascinated by the cognitive, cultural, and language characteristics of deaf and hard-of-hearing students?
- Are you looking for personal attention and advisement from faculty and staff who are leaders in the field?
- Would you like to learn, live and work on a campus designed for collaboration between deaf and hearing students?
- Do you want training in evidence-based instructional approaches?

Why choose RIT/NTID’s Deaf Education Degree

With the pressing need for more secondary education teachers, especially in science and mathematics, the strong foundation RIT provides in these areas creates an exceptional environment for deaf, hard-of-hearing, and hearing students to pursue a teaching degree. The RIT/NTID’s deaf education degree offers the following advantages:
- Personal attention from program faculty members.
- Dual certification in a secondary school content area in grades 7-12 for students who are hearing or deaf as well as in deaf education for grades K-12.
- Strong faculty with expertise in pedagogy, language development, teaching and curriculum, speech development, research, educational technology, youth and adolescent development, student advisement and placement, and educational issues.
- Variety of student-teaching placement options.
- Access to a wide array of research materials.
- Extensive library resources on the education of students who are deaf or hard of hearing, Deaf culture, sign language, and curriculum materials.
- Thorough and thoughtful personal advising.
- Close proximity to schools for deaf students and mainstream programs.
- A vibrant Deaf community in Rochester, N.Y.
- Numerous seminars and workshops focused on contemporary educational and cultural topics.
- Immersion in American Sign Language.
- Collaborative projects with faculty, staff members, and students.

The RIT 4+2 Teacher Education Program

Be part of an exciting new program that creates a bridge between a four-year RIT bachelor’s degree and RIT’s two-year master of science degree in secondary education. The RIT 4+2 Teacher Education Program is an exceptional value and an outstanding choice designed to give you the skills you need for a successful teaching career. In the 4+2 program you will:
- Receive dual certification in the education of students who are deaf or hard-of-hearing as well as in an academic subject such as science or math.
- Enjoy small class sizes and one-to-one discussions with faculty who are international leaders in research and the art of teaching.
- Have the opportunity to gain valuable real-world teaching experience before you graduate.
- Enjoy a top-quality education at a substantially reduced tuition rate. For more information on the RIT 4+2 Teacher Education Program, contact the NTID Office of Admissions.

How the Program Works

- You must be accepted to an RIT bachelor’s degree program in one of the following areas: Any major in the College of Science.Any major in the College of Engineering that requires 30 credits in math or science.Any major in the College of Liberal Arts that requires 30 credits in English or history/social studies.An applied arts and sciences program requiring 30 credits in either math, science, or English, history/social studies.
- Once you are enrolled in one of the bachelor’s degree programs for at least two years, you can complete the application for graduate study to the MS degree in secondary education (during your 4th year of study). You must interview with the department chairperson prior to your admission to qualify for the program.
- Upon completion of your bachelor’s degree program, you must have: A cumulative GPA of 3.25 or higher, Graduate Record Exam (GRE) is not needed. A cumulative GPA of 2.8-3.24, GRE scores must be submitted (combined score of at least 280 and analytic writing score of 3.0 or better). Completed 30 credits and earned a 3.0 GPA in your academic subject area (ex. math, science, history/social studies, or English) Successfully taken and passed at least ASL I and ASL II through RIT’s College of Liberal Arts, or earned credit by exam. For more information on the RIT 4+2 Teacher Education Program, contact the NTID Office of Admissions.

Admission requirements

This program is available on-campus or online.

On Campus

Offered Full-time

Full-time Admit Term(s): Fall

Full-time Application Deadline: Rolling

Full-time STEM Designated: Yes
Online

Offered Full-time
Full-time Admit Term(s): Fall
Full-time Application Deadline: Rolling
Full-time STEM Designated: No

Full-time study is 9+ semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Secondary Education of Students Who Are Deaf or Hard of Hearing program, candidates must fulfill the following requirements:

• Complete an online graduate application.
• Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
• Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
• Demonstrate a recommended minimum cumulative GPA of 3.0 (or equivalent).
• Submit a current resume or curriculum vitae.
• Submit a written teaching philosophy statement explaining your perspective on what is important in teaching and learning which demonstrates strong critical thinking and writing abilities. Please limit the response to two typed pages.
• Submit a signed (American Sign Language) personal statement about why you want to become a teacher. Please limit the response video to a maximum of three minutes.
• Submit two letters of recommendation.
• Entrance exam requirements: GRE required for students who have a GPA below 3.0. No minimum score requirement.
• Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores
International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

<table>
<thead>
<tr>
<th>Test</th>
<th>Score</th>

</thead>
<tbody>
<tr>
<td>TOEFL</td>
<td>79</td>
</tr>
<tr>
<td>IELTS</td>
<td>6.5</td>
</tr>
<tr>
<td>PTE Academic</td>
<td>56</td>
</tr>
</tbody>
</table>

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Additional Information

New York State Certification Prerequisites
For Dual Certification: 30 semester credit hours in a content area are required by the New York State Education Department for initial certification to teach a secondary content area (grades 7-12). Students who do not have the required number of hours must complete the additional credits before applying for New York State certification. Secondary academic subjects include American Sign Language, English, mathematics, social studies, or science. Please note: The social studies content area includes economics and government, and requires at least 21 semester hours in the history and geography of the United States and the world.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. Because RIT receives federal support, students in the MSSE program pay less than RIT’s regular tuition rate. View the Deaf and Hard-of-Hearing and Hearing NTID-Supported Students tuition section in cost of attendance.

A combination of sources can help fund your graduate degree. Learn how to fund your degree.
Faculty

Dean’s Office

Applied and Computational Mathematics, MS

www.rit.edu/study/applied-and-computational-mathematics-ms

Kara Maki, Associate Professor
585-475-2541, klmsma@rit.edu

Program overview

The applied and computational mathematics master’s degree refines your capabilities in applying mathematical models and methods to study a range of problems, with an emphasis on developing and implementing computing solutions. Sophisticated mathematical tools are increasingly used to solve problems in management science, engineering, biology, financial portfolio planning, facilities planning, control of dynamic systems, and design of composite materials. The goal of RIT’s master’s in applied mathematics is to find computing solutions to real-world problems.

Applied and Computational Mathematics

The ideas of applied mathematics pervade several applications in a variety of businesses and industries as well as the government. The reasoning, deduction, and logic skills developed in this program will make you more competitive in a wide array of positions and industries.

Sophisticated mathematical tools are increasingly used to develop new models, modify existing ones, and analyze system performance. This includes applications of mathematics to problems in management science, biology, portfolio planning, facilities planning, control of dynamic systems, and design of composite materials. The goal of this mathematics master’s degree is to find computable solutions to real-world problems arising from these types of situations.

RIT’s Master’s in Applied Mathematics

RIT’s mathematics master’s provides you with the capability to apply mathematical models and methods to study various problems that arise in industry and business, with an emphasis on developing computable solutions that can be implemented.

Tailor the applied and computational mathematics master’s degree to fit your career goals. Electives may be selected from the graduate course offerings in the School of Mathematics and Statistics or from other RIT graduate programs, with approval from the graduate program director. You also have the option to complete a thesis, which includes the presentation of original ideas and solutions to a specific mathematical problem. The proposal for the thesis work and the results must be presented and defended before the advisory committee.

Applied Mathematics Careers

Graduates of the masters in applied mathematics are uniquely qualified to address the full breadth of mathematical challenges and have developed a depth of knowledge in their chosen specializations.

The Department of Defense accounts for about 81 percent of the mathematicians employed by the federal government. In the private sector, mathematicians are employed by scientific research and development services, software publishers, insurance companies, and in aerospace or pharmaceutical manufacturing.

Recent graduates are employed as engineers, economists, analysts (e.g. operations research), physicists, cryptanalysts (codes), actuaries, teachers, market researchers, and financial advisors. Apple, BAE Systems, Ernst & Young, IBM, and Microsoft are just a few of the employers who have hired graduates of the applied and computational mathematics program.

Experiential Learning

Cooperative Education

What makes an RIT science and math education exceptional? It’s the ability to complete science and math co-ops and gain real-world experience that sets you apart. Co-ops in the College of Science include cooperative education and internship experiences in industry and health care settings, as well as research in an academic, industry, or national lab. These are not only possible at RIT, but are passionately encouraged.

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

National Labs Career Events and Recruiting

The Office of Career Services and Cooperative Education offers National Labs and federally-funded Research Centers from all research areas and sponsoring agencies a variety of options to connect with and recruit students. Students connect with employer partners to gather information on their laboratories and explore co-op, internship, research, and full-time opportunities. These national labs focus on scientific discovery, clean energy development, national security, technology advancements, and more. Recruiting events include our university-wide Fall Career Fair, on-campus and virtual interviews, information sessions, 1:1 networking with lab representatives, and a National Labs Resume Book available to all labs.

Program overview

The advanced certificate in applied statistics is designed for engineers, scientists, analysts, and other professionals who want a solid education in the statistical methods that are most closely related to their work.

Graduate Certificate in Applied Statistics: On-Campus or Online

RIT’s advanced certificate in applied statistics is a flexible, on-campus or online graduate-level credential. Designed for working professionals from a variety of disciplines who need to add statistical analysis skills to their resume through part-time study. With this credential, you’ll gain the skills you need to apply to your job immediately, and to increase your value and marketability in today’s data-rich environment.

Recent studies show that hybrid jobs—those requiring complex sets of skills from different fields—pay nearly 40% higher than their single-focus counterparts, and are on the rise in every domain of business. The advanced certificate in applied statistics is a smart investment to be able to move into hybrid, complex, higher-paying jobs.

The advanced certificate in applied statistics is available both on-campus and online to accommodate diverse schedules. The program requires two core courses and two elective courses. In addition to earning this credential, you also have access career counselors in RIT’s Office of Career Services and Cooperative Education. These counselors provide advice to help you plan, prepare for, and meet your career goals.

A Foundation for the MS in Applied Statistics

With your advanced certificate in applied statistics, the MS in applied statistics is within reach. The four courses you will complete for the graduate certificate count toward the master’s degree in applied statistics. To learn more visit the MS in applied statistics program page or complete the Graduate Information Request Form.

What is a Graduate Certificate?

A graduate certificate, also called an advanced certificate, is a selection of up to five graduate level courses in a particular area of study. It can serve as a stand-alone credential that provides expertise in a specific topic that enhances your professional knowledge base, or it can serve as the entry point to a master's degree. Some students complete an advanced certificate and apply those credit hours later toward a master’s degree.

### Admission requirements

This program is available on-campus or online.

#### On Campus

- Offered Part-time
- Part-time Admit Term(s): Fall or Spring
- Part-time Application Deadline: Rolling
- Part-time STEM Designated: No

#### Online

- Offered Part-time
- Part-time Admit Term(s): Fall, Spring, or Summer
- Part-time Application Deadline: Rolling
- Part-time STEM Designated: No

Part-time study is 1-8 semester credit hours. RIT will not issue a student visa for advanced certificates.

### Application Details

To be considered for admission to the Applied Statistics program, candidates must fulfill the following requirements:
- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

### English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- **TOEFL:** 79
- **IELTS:** 6.5
- **PTE Academic:** 56

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

### Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

### Additional Information

#### Prerequisites

Applicant must have college-level credit or practical experience in mathematics and statistics (two courses in probability and statistics).

#### Online Degree Information

The online Applied Statistics Advanced Certificate can only be completed part-time, taking one or two courses per term. The average time to completion is one year. All courses are asynchronous and your academic advisor will work with you to select courses that meet your degree requirements and your schedule. Students typically spend 10-12 hours per week per class, depending on the content and their background knowledge. A successfully completed Applied Statistics Advanced Certificate can be "stacked", and will award 12 credits toward our Applied Statistics MS. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

#### Online Tuition Eligibility

The online Applied Statistics Adv Cert is a designated online degree program that is billed at a 43% discount from our on-campus rate. View the current online tuition rate.
**Applied Statistics, MS**

**www.rit.edu/study/applied-statistics-ms**

**Robert Parody, Associate Professor**  
**585-475-5288, rjpeqa@rit.edu**

**Program overview**

The master's in applied statistics focuses on data mining, design of experiments, health care applications, and the application of statistics to imaging and industrial environments. You’ll integrate knowledge learned through engaging courses to solve more complex problems for a wide range of organizations, including industrial, marketing, education, insurance, credit, government, and health care.

**RIT’s Statistics Master’s Degree: On-Campus or Online**

RIT’s master’s in applied statistics is available to both full- and part-time students with courses offered both on-campus and online. In the applied statistics master’s you will learn:

- How to manage, analyze, and draw inferences from big data—adapting to a diverse audience using business communication skills to effectively convey your insights
- How to use data mining—with tools including machine learning, software like SAS and R—to drive insightful decision-making
- How to apply statistics to the design and analysis of experiment-based industrial studies and clinical trials

**Curriculum packed with high-demand skills**

- **Software and Programming:** Skills in Python and R are in 20% of job postings related to statistics.
- **Data Science:** Demand for skills in artificial intelligence has grown 190% in the last 2 years, and machine learning is in the top 15 skills employers want.
- **Experimental Design:** Crossover, adaptive, and equivalence designs are dominating 38% of this job market.
- **Modeling Techniques:** Statistical analysis skills like linear, multivariate, and logistic regression are in over ⅓ of all postings for jobs in this field.

**Areas of Concentration**

- **Clinical Trials**
- **Data Mining/Machine Learning**
- **Industrial Statistics**
- **Informatics**

**Electives**

Choose your elective courses with the guidance of an advisor. These courses are usually department courses but may include up to 6 credit hours from other departments (or may be transferred from other universities) that are consistent with your professional objectives.

**Capstone Thesis/Project**

Practice integrating your knowledge from courses to solve more complex problems by completing a capstone project. This project is taken near the end of your course of study.

Students, with advisor approval, may write a thesis as their capstone. A thesis may be 3 or 6 credit hours. If a student writes a 6 credit hour thesis, they would be required to complete four elective courses instead of five.

**Earn a Credential As You Study**

Earn the advanced certificate in applied statistics and advance your career, all while working toward your master of science in applied statistics. These four courses may be fully applied toward the master’s degree.

**Experiential Learning**

**Cooperative Education and Internships**

What makes an RIT science and math education exceptional? It’s the ability to complete science and math co-ops and gain real-world experience that sets you apart. Co-ops in the College of Science include cooperative education and internship experiences in industry and health care settings, as well as research in an academic, industry, or national lab. These are not only possible at RIT, but are passionately encouraged.

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

**National Labs Career Events and Recruiting**

The Office of Career Services and Cooperative Education offers National Labs and federally-funded Research Centers from all research areas and sponsoring agencies a variety of options to connect with and recruit students. Students connect with employer partners to gather information on their laboratories and explore co-op, internship, research, and full-time opportunities. These national labs focus on scientific discovery, clean energy development, national security, technology advancements, and more. Recruiting events include our university-wide Fall Career Fair, on-campus and virtual interviews, information sessions, 1:1 networking with lab representatives, and a National Labs Resume Book available to all labs.

Application Details

To be considered for admission to the Applied Statistics program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Have college-level credit or practical experience in a programming language.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

<table>
<thead>
<tr>
<th>Test</th>
<th>Minimum Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOEFL</td>
<td>79</td>
</tr>
<tr>
<td>IELTS</td>
<td>6.5</td>
</tr>
<tr>
<td>PTE Academic</td>
<td>56</td>
</tr>
</tbody>
</table>

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

Additional Information

Prerequisites

- Applicant must have college-level credit or practical experience in mathematics (two-course sequence in calculus) and one course in applied statistics.
- Applicant must have college-level credit or practical experience in a programming language.

Online Degree Information

The online Applied Statistics MS program can only be completed part-time, taking one or two courses per term. The average time to completion is two and a half to three years. Courses in the online program can all be completed asynchronously. They are designed to accommodate working professionals and students in various time zones to provide the greatest amount of flexibility. Program electives are slightly more limited than courses available in the on-campus program. Students typically spend 10-12 hours per week per class, depending on the content and their background knowledge. The online program does not have any in-person requirements. Your academic advisor will work with you to select courses that meet your degree requirements and your schedule. Both the online and on-campus program culminates with a final capstone project. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

Online Tuition Eligibility

The online Applied Statistics MS is a designated online degree program that is billed at a 43% discount from our on-campus rate. View the current online tuition rate.
Astrophysical Sciences and Technology, MS

www.rit.edu/study/astrophysical-sciences-and-technology-ms

Andrew Robinson, Professor
585-475-2726, axrsps@rit.edu

Program overview

The degree in astrophysics focuses on the underlying physics of phenomena beyond the Earth, and on the development of the technologies, instruments, data analysis, and modeling techniques that will enable the next major strides in the field.

There has never been a more exciting time to obtain an astronomy degree and study the universe beyond the confines of the Earth. A new generation of advanced ground-based and space-borne telescopes and enormous increases in computing power are enabling a golden age of astrophysics. RIT’s astronomy degree has a multidisciplinary emphasis that sets it apart from conventional astrophysics graduate programs at traditional research universities.

RIT’s Master’s in Astrophysics

RIT’s master’s in astrophysics offers students a wide range of frontier research topics in areas including multi-wavelength astrophysics, instrumentation and detector technology, computational astrophysics and gravitational wave astronomy and numerical relativity. Our guiding principle is to provide an intellectually demanding program within an informal, student-centered and supportive environment.

At RIT, you have the flexibility to tailor your plan of study to emphasize astrophysics (including observational and theoretical astrophysics), computational and gravitational astrophysics (including numerical relativity, gravitational wave astronomy), or astronomical technology (including detector and instrumentation research and development).

Pursue research interests in a wide range of topics, including design and development of novel detectors, multiwavelength studies of protostars, active galactic nuclei and galaxy clusters, gravitational wave data analysis, and theoretical and computational modeling of astrophysical systems including galaxies and compact objects such as binary black holes.

RIT’s astrophysics research areas include:
- Computational general relativity
- Gravitational wave astronomy
- Multi-messenger astrophysics
- Time domain astrophysics
- Experimental cosmology
- Supermassive black holes
- Active galaxie, galaxy evolution and galaxy clusters
- Proto-stars and proto-planetary disks
- Planetary nebulae
- Binary stars
- Stellar evolution
- Sub-orbital Astrophysics
- Next generation infrared detectors
- Zero read-noise detectors

Depending on research interests, you may participate in one of three research centers at RIT: the Center for Computational Relativity and Gravitation(Video), the Center for Detectors or the Laboratory for Multi-wavelength Astrophysics.

Master’s in Astrophysics Degree: What You’ll Study

A degree in astrophysics at RIT consists of four core courses, two to four elective courses, two semesters of graduate seminar, and a research project culminating in a thesis.

During the first year, you will begin a research project under the guidance of a faculty research advisor. Focus on the project becomes more significant during the second year after the core courses have been completed. A thesis committee is appointed by the program director and oversees the final defense of the thesis, which consists of a public oral presentation by the student, followed by a closed-door examination by the committee.

Careers for Master’s in Astrophysics

Alumni of our programs most often work in research positions or education programs ranging from K-12 to higher education. Alumni also are successful in computing, information technology, federal government, and imaging technology.

As a standalone research degree, the MS is a qualification for positions in data analysis or an entry into numerous other careers ranging from education to federal government. The MS also provides a stepping stone to a Ph.D.

MS to Ph.D. Transfer

For those who want to pursue a career in research, the Ph.D. provides an essential qualification. It opens the door to positions such as a university professor or staff scientist in institutions such as NASA, and to many other careers in STEM requiring analytical capabilities.

Students in the MS degree program who have excelled in their course work and research project may be permitted, by program approval, to transition into the doctoral degree in astrophysical sciences and technology, with the MS thesis defense serving as the Ph.D. qualifying examination. Such a transition from MS to Ph.D. is contingent on the availability of an advisor and research funding.

Experiential Learning

Cooperative Education

What makes an RIT science and math education exceptional? It’s the ability to complete science and math co-ops and gain real-world experience that sets you apart. Co-ops in the College of Science include cooperative education and internship experiences in industry and health care settings, as well as research in an academic, industry, or national lab. These are not only possible at RIT, but are passionately encouraged.

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

National Labs Career Events and Recruiting

The Office of Career Services and Cooperative Education offers National Labs and federally-funded Research Centers from all research areas and sponsoring agencies a variety of options to connect with and recruit students. Students connect with employer partners to gather information on their laboratories and explore co-op, internship, research, and full-time opportunities. These national labs focus on scientific discovery, clean energy development, national security, technology advancements,
and more. Recruiting events include our university-wide Fall Career Fair, on-campus and virtual interviews, information sessions, 1:1 networking with lab representatives, and a National Labs Resume Book available to all labs.

Admission requirements

This program is available on-campus only.

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college in the physical sciences, mathematics, computer science, or engineering.
- A recommended minimum cumulative GPA of 3.2 (or equivalent) in course work in mathematical, science, engineering, and computing subject areas.
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

| TOEFL: 79 |
| IELTS: 6.5 |
| PTE Academic: 56 |

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.
Astrophysical Sciences and Technology, Ph.D.

www.rit.edu/study/astrophysical-sciences-and-technology-phd
Andrew Robinson, Professor
585-475-2726, axrps@rit.edu

Program overview

There has never been a more exciting time to study the universe beyond the confines of the Earth. A new generation of advanced ground-based and space-borne telescopes and enormous increases in computing power are enabling a golden age of astrophysics. The doctoral program in astrophysical sciences and technology focuses on the underlying physics of phenomena beyond the Earth and on the development of the technologies, instruments, data analysis, and modeling techniques that will enable the next major strides in the field. The program’s multidisciplinary emphasis sets it apart from conventional astrophysics graduate programs at traditional research universities.

The program offers tracks in astrophysics (including observational and theoretical astrophysics), computational and gravitational astrophysics (including numerical relativity, gravitational wave astronomy), and astronomical technology (including detector and instrumentation research and development). Students can pursue research interests in a wide range of topics, including design and development of novel detectors, multiwavelength studies of proto-stars, active galactic nuclei and galaxy clusters, gravitational wave data analysis, and theoretical and computational modeling of astrophysical systems including galaxies and compact objects such as binary black holes. Depending on research interests, students may participate in one of three research centers: the Center for Computational Relativity and Gravitation (Video), the Center for Detectors, or the Laboratory for Multi-wavelength Astrophysics.

Plan of Study

In the astrophysics Ph.D., students complete a minimum of 60 credit hours of study, consisting of at least 24 credit hours of course work and at least 24 credit hours of research. Students may choose to follow one of three tracks: astrophysics, astroinformatics and computational astrophysics (with the option of a concentration in general relativity), or astronomical technology. All students must complete four core courses with grades of B or better, as well as two semesters of a graduate seminar. Students must pass a qualifying examination on the core course subject matter prior to receiving the doctoral degree. The remaining course credits are made up from specialty track courses and electives. Students must pass a qualifying examination, which consists of completing and defending a master’s-level research project, prior to embarking on the dissertation research project.

Electives

Electives include additional courses in astrophysics and a wide selection of courses offered in other RIT graduate programs (e.g., imaging science, computer science, engineering), including detector development, digital image processing, computational techniques, optics, and entrepreneurship, among others.

Ph.D. qualification requirements: Master’s-level research project

During the first year of the program, most doctoral candidates begin a master’s-level research project under the guidance of a faculty member. The project gains momentum during the second year after the core courses have been completed. The master’s-level research topic may be different from the eventual doctoral dissertation topic, and the supervising faculty member will not necessarily serve as the dissertation research advisor.

The doctoral qualification requirements consist of a combination of a publication-quality master’s-level project report, which may be in the form of a thesis (if the student so chooses) and an oral presentation and defense of the master’s-level project. This qualification process, which must be completed by the beginning of the third year of full-time study or its equivalent, is designed to ensure the student has the necessary background knowledge and intellectual skills to carry out doctoral-level research in the subject areas of astrophysical sciences and technology. A director-approved committee consisting of the student’s master’s-level project research advisor and two additional faculty members will assess the student’s project report and defense.

Dissertation research advisor

After passing the qualifying examination, students are guided by a dissertation research advisor who is approved by the program director. The choice of advisor is based on the student’s research interests, faculty research interests, and available research funding.

Research committee

After passing the qualifying examination, a dissertation committee is appointed for the duration of the student’s tenure in the program. The committee chair is appointed by the dean of graduate education and must be a faculty member in a program other than astrophysical sciences and technology. The committee chair acts as the institutional representative in the final dissertation examination. The committee comprises at least four members and in addition to the chair, must also include the student’s dissertation research advisor and at least one other member of the program’s faculty. The fourth member may be an RIT faculty member, a professional affiliated in industry, or a representative from another institution. The program director must approve committee members who are not RIT faculty.

Ph.D. proposal review (candidacy exam)

Within six months of the appointment of the dissertation committee, students must prepare a Ph.D. research project proposal and present it to the committee for review. The student provides a written research proposal and gives an oral presentation to the committee, who provides constructive feedback on the project plan. The review must take place at least six months prior to the dissertation defense.

Annual review

Each fall, students provide an annual report in the form of an oral presentation, which summarizes progress made during the preceding year. The program director also monitors student’s progress toward meeting the requirements for either the qualifying examination (during the first two years), or the Ph.D. (after passing the qualifying examination). Students may be interviewed, as necessary, to explore any concerns that emerge during the review and to discuss remedial actions.

Final examination of the dissertation

Once the dissertation is written, distributed to the dissertation committee, and the committee agrees to administer the final examination, the doctoral candidate may schedule the final examination. The candidate must distribute a copy of the dissertation to the committee and make the dissertation available to interested faculty at least four weeks prior to the dissertation defense.

The final examination of the dissertation is open to the public and is primarily a defense of the dissertation research. The examination consists of an oral presentation by the student, followed by questions from the audience. The dissertation committee privately questions the candidate following the presentation. The dissertation committee caucuses immediately following the examination and thereafter notifies the candidate and the program director of the results.
Residency
All students in the program must spend at least one year (summer term excluded) in residence as full-time students to be eligible to receive the doctorate degree.

Time Limitations
All doctoral candidates must maintain continuous enrollment during the research phase of the program. Normally, full-time students complete the course of study in approximately four to five years. A total of seven years is allowed to complete the requirements after first attempting the qualifying examination.

Experiential Learning
National Labs Career Events and Recruiting
The Office of Career Services and Cooperative Education offers National Labs and federally-funded Research Centers from all research areas and sponsoring agencies a variety of options to connect with and recruit students. Graduate Bulletin 183
### Admission requirements

This program is available on-campus only.

Offered Full-time

Full-time Admit Term(s): Fall

Full-time Application Deadline: January 15 priority deadline, rolling thereafter

Full-time STEM Designated: Yes

Full-time study is 9+ semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

### Application Details

To be considered for admission to the Astrophysical Sciences and Technology program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

**English Language Test Scores**

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 79
- IELTS: 6.5
- PTE Academic: 56

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

### Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Ph.D. students typically receive full tuition and an RIT Graduate Assistantship that will consist of a research assistantship (stipend) or a teaching assistantship (salary).
The job market is rich with opportunities for those with graduate degree in bioinformatics, particularly when coupled with research as thesis work. This research provides exposure to real-world problems—and their solutions—not otherwise attainable in an academic setting.

Graduates of the bioinformatics master’s degree currently work senior analysts/programmers, associate systems analysts, bioinformaticist, bioinformatics analysts, bioinformatics engineers, computational biologists, and software engineers.

**Experiential Learning**

**Cooperative Education**

What makes an RIT science and math education exceptional? It’s the ability to complete science and math co-ops and gain real-world experience that sets you apart. Co-ops in the College of Science include cooperative education and internship experiences in industry and health care settings, as well as research in an academic, industry, or national lab. These are not only possible at RIT, but are passionately encouraged.

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

**National Labs Career Events and Recruiting**

The Office of Career Services and Cooperative Education offers National Labs and federally-funded Research Centers from all research areas and sponsoring agencies a variety of options to connect with and recruit students. Students connect with employer partners to gather information on their laboratories and explore co-op, internship, research, and full-time opportunities. These national labs focus on scientific discovery, clean energy development, national security, technology advancements, and more. Recruiting events include our university-wide Fall Career Fair, on-campus and virtual interviews, information sessions, 1:1 networking with lab representatives, and a National Labs Resume Book available to on-campus and virtual interviews, information sessions, 1:1 networking with lab representatives, and a National Labs Resume Book available to all labs.

**Admission requirements**

This program is available on-campus only.

Offered Full-time

- Full-time Admit Term(s): Fall or Spring
- Full-time Application Deadline: Rolling
- Full-time STEM Designated: Yes

Offered Part-time

- Part-time Admit Term(s): Fall or Spring
- Part-time Application Deadline: Rolling
- Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

**Application Details**

To be considered for admission to the Bioinformatics program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college in biology, biotechnology, biochemistry, chemistry, computer science, information technology, statistics, or a related discipline.
- A recommended minimum cumulative GPA of 3.2 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: GRE required for individuals with degrees from international universities. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

**English Language Test Scores**

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 79
- IELTS: 6.5
- PTE Academic: 56

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant's need for additional English language courses.

**Cost and Financial Aid**

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.
1. A minimum of 30 semester credit hours beyond the bachelor’s degree.
Courses in chemistry consist of core and focus area courses. Core courses are designed to increase your breadth of chemical knowledge, while focus area courses increase depth. Core courses include four semester credit hours in Graduate Chemistry Seminar and one credit hour in Chemistry Writing (CHEM-670). Focus area courses are chosen to address the you career goals and any undergraduate deficiencies in chemistry. Focus area courses must be at the graduate level and are chosen in consultation between you and your graduate advisor. Focus area courses outside of chemistry are acceptable provided they are approved by your graduate advisor.

2. Research
Ten semester credit hours of research are required with the thesis option. If you opt for the project option, four semester hours of project research are required.

3. Capstone
If enrolled in the thesis option you will be expected to complete an independent research thesis and pass an oral defense. Typically, all requirements are met within two years. While enrolled in the project option you will have numerous ways of satisfying the capstone requirement for their project. These include but are not limited to conference presentations, papers, journal articles, patents, and seminars.

Equipment and Resources
The School of Chemistry and Materials Science has modern instrumentation in the areas of spectroscopy (NMR, IR, UV-vis, fluorescence, atomic absorption, fluorimetry), chromatography (gas chromatography, high-performance liquid chromatography, capillary electrophoresis, etc.), mass spectrometry (high-performance lc- and gc-mass spectrometry and electrospray mass spectrometry), and materials characterization (rheometry, thermal gravimetric analysis, differential scanning calorimetry, hot-stage microscopy and contact angle goniometry).

Part-time Study
Courses are offered in the late afternoons and evenings to encourage practicing chemists to pursue the MS degree without interrupting their employment. Part-time students may take the project option, which includes a capstone project in place of a thesis. Students employed full-time normally take one course each semester. At this pace, coursework can be completed within four to five years.

Experiential Learning
Cooperative Education
Cooperative education, or co-op for short, is full-time, paid work experience in your field of study. And it sets RIT graduates apart from their competitors. It's exposure—early and often—to a variety of professional work environments, career paths, and industries. RIT co-op is designed for your success.

What makes an RIT education exceptional? It's the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Students at the master's level who have, or are able to obtain, industrial employment may be able to earn cooperative education credit for their work experiences. Semesters of co-op can be interspersed with semesters of full-time academic work.
National Labs Career Events and Recruiting

The Office of Career Services and Cooperative Education offers National Labs and federally-funded Research Centers from all research areas and sponsoring agencies a variety of options to connect with and recruit students. Students connect with employer partners to gather information on their laboratories and explore co-op, internship, research, and full-time opportunities. These national labs focus on scientific discovery, clean energy development, national security, technology advancements, and more. Recruiting events include our university-wide Fall Career Fair, on-campus and virtual interviews, information sessions, 1:1 networking with lab representatives, and a National Labs Resume Book available to all labs.

Admission requirements

This program is available on-campus only.

Offered Full-time

Full-time Admit Term(s): Fall or Spring
Full-time Application Deadline: Fall - February 15 priority deadline, rolling thereafter; Spring - rolling
Full-time STEM Designated: Yes
Offered Part-time
Part-time Admit Term(s): Fall or Spring
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Chemistry program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college in chemistry. Applicants with an undergraduate degree in another scientific discipline and the equivalent of a full year of work in analytical chemistry, organic chemistry, physical chemistry, physics, and calculus will also be considered for admission.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: GRE required. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 79
- IELTS: 6.5
- PTE Academic: 56

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant's need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.
Color Science, MS

www.rit.edu/study/color-science-ms

Susan Farnand, Assistant Professor
585-475-4567, Susan.Farnand@rit.edu

Program overview

At the only university in the nation offering this program of study, you
will be exposed to the rich, dynamic field of color science through theory
and practical application.

The study of color is a fundamental field of science that is dedicated to
understanding the creation of colored stimuli, sources of illumination,
and ultimately the human perception of color.

RIT’s color science degree provides a graduate-level study in both sci-
entific theory and practical application. The program provides you with a
broad exposure to the field of color science and affords them the unique
opportunity of specializing in an area appropriate for their background
and interest. This objective is accomplished through the program’s core
courses, selection of electives, and completion of a thesis or graduate
project.

RIT’s Color Science Degree

The color science degree is designed for students from a wide range of
undergraduate degrees. If you completed a program in physics, biology,
chemistry, mathematics, computer science, engineering, neuroscience,
experimental psychology, imaging, or any applied discipline pertaining
to the quantitative description of color, this program could be a good fit
for you.

Color science is used everyday: in the design and control of most man-
made colored materials including textiles, coatings, and polymers; to
specify such diverse materials as soil and wine; and, in digital photogra-
phy, desktop and projection display, and printing.

Where other programs may address just optics or just materials,
just lighting or just perception; here you’ll learn the full range of color
science. This includes the fundamental concepts of color science and
its applications, as well as how to do research in the field and present it
successfully.

RIT Color Science students work on projects including:
- Color Perception in Assisted Reality/Virtual Reality
- Color in Agriculture
- Color Imaging (Cameras and Displays, e.g. smartphones)
- Individual Differences in Human Color Perception
- Limits of Human Color Vision

Study color at the world-renowned Munsell Color Science Laboratory,
only offered here at RIT.

The Study of Color

The color science degree is a combination of required courses in color
science, elective courses appropriate for the candidate’s background, and
either a research thesis or graduate project.

For full-time students, the program requires three to four semesters of
study. Part-time students generally require two to four years of study.

The color science program is designed for students with an under-
graduate degree in a scientific or another technical discipline. Those with
adequate undergraduate work in related sciences start the program as
matriculated graduate students.

Students without adequate undergraduate work in related sciences
must take foundation courses prior to matriculation into the graduate

program. A written agreement between the candidate and the program
coordinator will identify the required foundation courses.

Color Science Careers

Alumni of our programs are in high demand and uniquely qualified
to address the full breadth of color science in multidisciplinary teams.
Color science degree graduates have accepted positions in electronic
imaging, color instrumentation, colorant formulation, and basic and
applied research. A sample of companies that have hired our graduates
include Apple, Dolby Laboratories, Google, Benjamin Moore, Canon
Corp., Hallmark, Hewlett Packard Corp., Microsoft Corp., Pantone,

Experiential Learning

Cooperative Education

What makes an RIT science and math education exceptional? It’s
the ability to complete science and math co-ops and gain real-world
experience that sets you apart. Co-ops in the College of Science include
cooperative education and internship experiences in industry and health
care settings, as well as research in an academic, industry, or national lab.
These are not only possible at RIT, but are passionately encouraged.

At the graduate level, and paired with an advanced degree, cooperative
education and internships give you the unparalleled credentials that truly
set you apart. Learn more about graduate co-op and how it provides you
with the career experience employers look for in their next top hires.

National Labs Career Events and Recruiting

The Office of Career Services and Cooperative Education offers National
Labs and federally-funded Research Centers from all research areas and
sponsoring agencies a variety of options to connect with and recruit
students. Students connect with employer partners to gather information
on their laboratories and explore co-op, internship, research, and
full-time opportunities. These national labs focus on scientific discovery,
clean energy development, national security, technology advancements,
and more. Recruiting events include our university-wide Fall Career Fair,
on-campus and virtual interviews, information sessions, 1:1 networking
with lab representatives, and a National Labs Resume Book available to
all labs.

Color Science, Ph.D.

www.rit.edu/study/color-science-phd
Susan Farnand, Assistant Professor
585-475-4567, Susan.Farnand@rit.edu

Program overview

Color has been an intense topic of interest for thousands of years. Mathematicians, philosophers, physicists, psychologists, poets, and other disciplines have all contributed to our understanding of color. RIT’s color science Ph.D. program allows you to contribute to knowledge creation and practical application of color science. You will conduct extensive research that encompasses diverse fields and multiple disciplines of science.

As a generalization, color science can be defined as the quantification of our perception of color. Its mastery requires a multidisciplinary educational approach encompassing physics, chemistry, physiology, statistics, computer science, neuroscience, and psychology. Color science is used in the design and control of most man-made colored materials including textiles, coatings, and polymers and to specify such diverse materials as soil and wine. It is used extensively in color reproduction including digital photography, desktop and projection display, and printing. Color science is ubiquitous.

The program is designed for students whose undergraduate degrees are in physics, biology, chemistry, mathematics, computer science, engineering, neuroscience, experimental psychology, imaging, or any applied discipline pertaining to the quantitative description of color, for example, textiles, graphic arts, animation, material science, and polymer science. All students must earn 60 credit hours as a graduate student. For full-time students, entering with a baccalaureate degree, the program requires about four years of study at the graduate level.

Plan of Study

The curriculum is a combination of required courses in color science, elective courses appropriate for the candidate’s background and interests, a research project during the second year of study, and a research dissertation. Students must pass a qualifying examination during their second year of study and a candidacy examination at least one year prior to completing their dissertation. Candidates who wish to enter the program, but lack adequate preparation, might be required to complete undergraduate foundation courses in mathematics, statistics, computer science, and general science before matriculating with graduate status.

Core courses

The following core courses are completed during the first year of study: Principles of Color Science (CLRS-601), Computational Vision Science (CLRS-720), Color Physics and Applications (CLRS-602), Modeling Visual Perception (CLRS-820), Historical Research Perspectives (CLRS-750), and Research and Publication Methods (CLRS-751).

Electives

Elective courses are selected depending on the student’s interests and background. The program director must approve all electives.

Second year project

During the second year, students engage in graduate-level research under the supervision of a graduate program faculty member. The topic may or may not be the same as the dissertation topic. One of the purposes of this project is to evaluate the student’s research capabilities and suitability for doctorate-level research.
Years three and beyond
After completing the required courses, students follow their study plan which consists of research and thesis credits and elective courses.

Qualifying examination
All students must pass a qualifying examination, which determines whether the student has a sufficient depth of knowledge in color science and the ability to perform research at the doctoral level.

The qualifying exam consists of a written test and an evaluation of the second-year research project. The written test is given twice each year and is based on the core curriculum in color science and any material deemed appropriate by the committee. Note that the required readings for these courses include textbooks and current literature. An evaluation of the second-year research project includes depth of research, productivity, quality, analytical skills, and the ability to communicate results. A written document is submitted in the style of a published proceedings paper.

Students must successfully pass the qualifying examination to continue in the program. Those who do not pass the qualifying examination may make a written request to the color science program director to change to the MS program. Requests must be received before the end of the semester in which the second written test is taken. Students with permission to enter the MS program will use their second-year research project as an MS research thesis topic. A written thesis is required. Students can then graduate with an MS in color science.

Dissertation research advisor and committee
After students pass the qualifying examination, a dissertation research adviser is selected from the graduate program faculty based on the student’s research interests, faculty research interests, and discussions with the color science graduate coordinator. A four-member dissertation committee is appointed for the duration of the student’s tenure in the program. The committee includes the dissertation research advisor, one other member of the color science faculty, and an external chair appointed by the dean of graduate education. The external chair must be a tenured member of the RIT faculty who is not a current member of the color science faculty. The fourth member may be an RIT faculty member or a professional affiliated with industry or another institution. The color science graduate program director must approve committee members who are not RIT faculty.

The dissertation committee prepares and administers the examination for admission to candidacy; assists in planning and coordinating research; provides research advice; supervises the writing of the dissertation; and conducts the final examination of the dissertation.

Developing a study plan
During the first semester of study, students work with the color science graduate program director to develop a study plan. This plan may be revised as necessary, subject to approval by the graduate program director. For example, the dissertation research adviser or the dissertation committee might recommend a revised study plan to include specific graduate electives.

Admission to candidacy
When the student thoroughly understands the dissertation research topic, the dissertation committee administers an examination to determine if the student can be admitted to candidacy for the doctoral degree in color science. The purpose of the examination is to ensure the student has the necessary intellectual skills and background knowledge to carry out their specific doctoral-level research project. The dissertation research adviser defines the type of examination and any requirements prior to the examination. Requirements include a dissertation proposal and may additionally include a review of literature, preliminary experiments, and the preparation of an oral presentation. The examination must be administered no later than one year prior to defending the dissertation.

Final examination of dissertation
Once the dissertation has been written, distributed to the dissertation committee, and the committee agrees to administer the final examination, the doctoral candidate can schedule the final examination.

The final examination of the dissertation is open to the public and is primarily a defense of the dissertation research. The examination consists of an oral presentation by the student, followed by questions from the audience. The dissertation committee may also elect to privately question the candidate following the presentation. The dissertation committee immediately notifies the candidate and the color science graduate program director of the result of the examination.

Teaching experience
All candidates for the Ph.D. must serve as a teaching assistant for a minimum of one course before scheduling the final examination of the dissertation. Candidates are encouraged to serve as a teaching assistant for two or more courses.

Public presentation experience
All candidates for the Ph.D. must present research in a public forum before scheduling the final examination of the dissertation. The preferred public forum is a technical conference.

Publication requirement
Prior to scheduling the Ph.D. dissertation defense (final examination), all candidates for the Ph.D. must have at least two refereed journal publications on the dissertation research accepted for publication (or published). The student must be a principal (not always first) author on both papers.

Color science MS graduates
Graduates from the color science master’s degree program, who are interested in the doctoral program, should contact the color science graduate program director to discuss their suitability for doctoral-level research. Before matriculating into the program, students must pass the qualifying examination. Once the examination has been passed successfully, students can be admitted into the doctoral program. The doctoral degree can be completed on a full- or part-time basis as long as the residency requirements are met.

MS and MA graduates from related disciplines
Because of the interdisciplinary nature of color science, students with MS and MA degrees often apply to the Ph.D. program. Graduate courses in related disciplines can be used as elective courses toward the degree. Furthermore, for degrees that required a research thesis, the second year research project might be waived. Thus, it might be possible for students with graduate degrees in a related discipline to take the qualifying examination during their first year of study. The color science graduate program director determines the specific courses and credit hours that can be applied toward the Ph.D. in color science.

Residency
All students in the program must spend at least two consecutive semesters (summer may be excluded) as resident full-time students to be eligible to receive the Ph.D.
**Time limitations**

All candidates for the Ph.D. must maintain continuous enrollment during the research phase of the program. The maximum number of research credits that apply to the degree does not limit such enrollment. Normally, full-time students complete the course of study for the doctorate in approximately four years. Requirements for the degree must be completed within seven years of the date students pass the qualifying examination.

**National Labs Career Fair**

Hosted by RIT’s Office of Career Services and Cooperative Education, the National Labs Career Fair is an annual event that brings representatives to campus from the United States’ federally funded research and development labs. These national labs focus on scientific discovery, clean energy development, national security, technology advancements, and more. Students are invited to attend the career fair to network with lab professionals, learn about opportunities, and interview for co-ops, internships, research positions, and full-time employment.

**Admission requirements**

This program is available on-campus only.

Offered Full-time

Full-time Admit Term(s): Fall

Full-time Application Deadline: January 15 priority deadline. Closed for new applications for Fall 2023.

Full-time STEM Designated: Yes

Full-time study is 9+ semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

**Application Details**

To be considered for admission to the Color Science program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a statement of purpose for research which will allow the Admissions Committee to learn the most about you as a prospective researcher.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

**English Language Test Scores**

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

<table>
<thead>
<tr>
<th>Test</th>
<th>Minimum Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOEFL</td>
<td>100</td>
</tr>
<tr>

</tr>
<tr>
<td>PTE Academic</td>
<td>70</td>
</tr>
</tbody>
</table>

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant's need for additional English language courses.

**Cost and Financial Aid**

An RIT graduate degree is an investment with lifelong returns. Ph.D. students typically receive full tuition and an RIT Graduate Assistantship that will consist of a research assistantship (stipend) or a teaching assistantship (salary).

**Additional Information**

**Foundation Courses**

Candidates without adequate undergraduate work in related sciences must take foundation courses prior to matriculation into the graduate program. A written agreement between the candidate and the program director will identify the required foundation courses. Foundation courses must be completed with an overall B average before a student can matriculate into the graduate program.

The foundation courses, representative of those often required, are as follows: one year of calculus, one year of college physics (with laboratory), one course in computer programming, one course in matrix algebra, one course in statistics, and one course in introductory psychology. Other science courses (with laboratory) might be substituted for physics.
Data Science, MS

www.rit.edu/study/data-science-ms

Travis Desell, Associate Professor
585-475-2991, tjdve@rit.edu

Program overview

Data science is one of the hottest fields in computing. The data science degree gives you the practical and theoretical skills to handle large-scale data management and analysis challenges that arise in today's data-driven organizations. This program appeals to professionals looking to enhance their skill set, and includes opportunities for customized course work within the broad field of data science and its various application areas.

RIT's Data Science Master's: On-Campus or Online

In response to the growing need to generate and analyze meaningful data across all industries, demand is on the rise for a new breed of professionals skilled in both analytics and computing. RIT's MS in data science encourages you to work with faculty experts in the fields of data science, analytics, and infrastructure who provide hands-on experience solving real problems. The curriculum includes opportunities for you to choose elective courses to pursue a variety of career paths within the broad field of data science and its various application areas. The program prepares you—regardless of your scientific, engineering, or business background—to pursue a career in data science.

RIT's colleges of Science and Computing and Information Sciences collaborated to deliver the data science master's, which combines the expertise and knowledge from faculty in both colleges to provide you with a unique understanding of math, computing, and technology. This approach enhances your learning outcomes and increases career marketability.

What You'll Learn

- Concepts and skills in machine learning to prepare you to build, tune, and discover actionable insights from predictive models
- Programming language skills in Python and Java to be able to synthesize large unstructured data sets
- Competencies in data mining, regression analysis, text mining, and predictive analytics
- How to create, critically assess, interpret, and communicate rich visualizations

A Data Science Master's Curriculum Packed with High-Demand Skills

The explosive growth in demand for data science skills is disrupting today's job markets. These skills are found in over half of all job postings related to this field.

- Data Analytics: Data analysis skills are projected to grow in demand to 82% by 2026, and machine learning skills are growing by 1-2%.
- Data Science: Demand for skills in artificial intelligence is growing by 128% and deep learning skills demand is growing by 135%.
- Software and Programming: Demand for expertise in Python is growing by 21%; blockchain skills are growing by 245%.
- Experimental Design: Crossover, adaptive, and equivalence designs are dominating 38% of this job market.

Designed for working professionals studying on campus or online part-time, this degree program has a strong career focus. You’ll learn both practical and theoretical skills to handle large-scale data management and analysis challenges ever-present in today’s data-driven organizations. This program places a unique focus on training data scientists in strong software engineering skills so that they can effectively develop real-world data science applications which operate within modern organizations’ computational workflows. You’ll be learning with students from varied professional backgrounds and working with practitioners active in the field to provide hands-on experience solving real problems.

Experiential Learning

Cooperative Education

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Cooperative education is optional but strongly encouraged for graduate students in the data science MS degree.

## Admission requirements

This program is available on-campus or online.

### On Campus

- **Offered Full-time**
  - Full-time Admit Term(s): Fall
  - Full-time Application Deadline: Rolling
  - Full-time STEM Designated: Yes
- **Offered Part-time**
  - Part-time Admit Term(s): Fall
  - Part-time Application Deadline: Rolling
  - Part-time STEM Designated: No

### Online

- **Offered Part-time**
  - Part-time Admit Term(s): Fall or Spring
  - Part-time Application Deadline: Rolling
  - Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

## Application Details

To be considered for admission to the Data Science program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: GRE required for individuals with degrees from international universities. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

### English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

<table>
<thead>
<tr>
<th>Test</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>TOEFL</td>
<td>88</td>
</tr>
<tr>
<td>IELTS</td>
<td>6.5</td>
</tr>
<tr>
<td>PTE Academic</td>
<td>60</td>
</tr>
</tbody>
</table>

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

## Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

## Additional Information

### Prerequisites

It is expected that prospective students will have a sufficient background in object-oriented programming. However, accepted students without this prerequisite knowledge may complete prescribed bridge course(s) that are available.

### Bridge Courses

Students whose undergraduate preparation or employment experience does not satisfy the prerequisites can make up for this by completing prerequisite bridge course(s), as prescribed by the graduate program director. The bridge course(s) are not part of the 30-semester credit hours required for the master’s degree. Grades for bridge course(s) are not included in a student’s GPA if taken before matriculation; they are included if completed after matriculation. Since bridge programs can be designed in a variety of ways, the graduate program director will assist students in planning and course selection.

### Online Degree Information

The online Data Science MS program can only be completed part-time, taking one or two courses per term. The average time to completion is two and a half to three years. For the fully online Data Science MS, core classes are offered asynchronously, as are many electives. Students can complete the degree without any synchronous courses. Program electives are slightly more limited than courses available in the on-campus program, and some may be synchronous only. Any live group discussions or class meetings are typically optional and may be recorded, and students should connect with their professor to obtain the material. Students typically spend 10-12 hours per week per class, depending on the content and their background knowledge. The online program culminates with a capstone course and capstone project. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

### Online Tuition Eligibility

The online Data Science MS is a designated online degree program that is billed at a 43% discount from our on-campus rate. View the current online tuition rate.
**Program overview**

Habitat loss, global climate change, water and air pollution, ozone depletion, species invasions, loss of biodiversity, and the accumulation of toxic wastes are among the many environmental dilemmas our society faces each day. These complex problems pit environmental limits against economic development, diverse cultures, ethics, values, and social stability, and therefore require an understanding of science, policy, society, history, and economics in order to address problems realistically and effectively. Environmental scientists must use integrated and holistic approaches to understand these issues in order to identify sustainable solutions to environmental challenges.

**RIT’s Environmental Science Master’s Degree**

RIT’s environmental science master’s degree provides you with a deep understanding of the science behind our environmental problems, the complex set of circumstances that impact environmental issues, and how environmental decisions and policies must attempt to find a balance between environmental conservation, human well-being, and economic development. You will amplify your hands-on classroom work with an in-depth thesis or project that provides you with an opportunity to work on real-world environmental problems under the guidance of skilled environmental scientists.

The practice of environmental science demands that you become a well-rounded specialists. To accomplish this, you will complete a concentration in one of the following areas:

- Chemistry
- Ecology and field biology
- Economics
- Environmental microbiology/molecular biology
- Geographic Information Systems (GIS)
- Organismal biology and evolution
- Public policy
- Remote sensing
- Statistics

You also may develop a self-designed concentration in an area of personal interest, subject to approval from an environmental science review committee.

Students in the environmental science master’s degree are working on a variety of projects:

- Conducting research in aquatic ecology studying the effects of pollution (microplastics, pharmaceuticals) and exploring remediation possibilities
- Exploring methane production in wetlands as part of global warming issues and climate change
- Looking at various methods to treat industrial wastewater, such as food processing wastewater streams from eggs, yogurt, and cheese, to reduce potential pollution issues in the environment
- Examining microbial degradation of agricultural mulches and new food packaging
- Mapping carbon dioxide emissions from trucks carrying frack- water from Pennsylvania to NY Wastewater Treatment Plants

Our environmental science master’s degree incorporates intensive fieldwork, policy implications, sustainable practices, and remote sensing into the curriculum. Students benefit from collaboration with experts from RIT’s College of Science, Chester F. Carlson Center for Imaging Science, and the Golisano Institute for Sustainability.

**Careers in Environmental Science**

Graduates of RIT’s environmental science master’s program are environmental consultants or field scientists for a range of companies such as Haley and Aldrich and La Bella Associates. Several of our graduates work for the U.S. Environmental Protection Agency. Still others pursue doctoral programs in environmental science. Students can also focus on policy issues if they are interested in becoming a spokesperson for the effects of climate change and pollution on the environment. Recent environmental science MS graduates have landed jobs at United Nations University, University of Rochester Medical Center, Microvi Biotechnologies Inc., The Nature Conservancy, General Dynamics, NYS Department of Environmental Conservation, United States Environmental Protection Agency, Haley and Aldrich, and LaBella Associates.

**Experiential Learning**

**Cooperative Education**

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Cooperative education is optional for environmental science majors, however, it offers students a great way to get a head start on their career with paid, professional work experience. Students can participate in cooperative education as soon as the summer after their second year of study. Co-op placements are typically with local, state, or federal government agencies, nonprofit environmental organizations, and a host of environmental consulting firms.

**National Labs Career Events and Recruiting**

The Office of Career Services and Cooperative Education offers National Labs and federally-funded Research Centers from all research areas and sponsoring agencies a variety of options to connect with and recruit students. Students connect with employer partners to gather information on their laboratories and explore co-op, internship, research, and full-time opportunities. These national labs focus on scientific discovery, clean energy development, national security, technology advancements, and more. Recruiting events include our university-wide Fall Career Fair, on-campus and virtual interviews, information sessions, 1:1 networking with lab representatives, and a National Labs Resume Book available to all labs.

### Application Details

To be considered for admission to the Environmental Science program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college in environmental science, biological science, or a related discipline.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit three letters of recommendation.
Imaging Science, MS

www.rit.edu/study/imaging-science-ms
Charles Bachmann, Professor
585-475-7238, cmbpci@rit.edu

Program overview

As digital image use continues to expand there is an increasing demand to fill dynamic imaging science careers. RIT’s imaging science MS provides the training and research opportunities needed to excel in industries like computer vision, astronomical imaging, satellite-based imaging systems and applications, virtual and augmented reality, and the use of UAVs (drones) in precision agriculture.

Master’s in Imaging Science at RIT: On-Campus or Online

Housed within the Chester F. Carlson Center for Imaging Science, RIT’s master’s in imaging science is geared toward advancing and broadening the skills of professionals working and researching in the many industries where various imaging modalities are used to research and solve problems in engineering and science. This emerging field integrates engineering, math, physics, computer science, and psychology to understand and develop imaging systems and technology.

Students choose two courses from a variety of tracks such as: digital image processing, computer vision, electro-optical imaging systems, remote sensing, color imaging, optics, hard copy materials and processes, and nanoimaging. Tracks may be created for students interested in pursuing additional fields of study. The degree can be completed on-campus or online, and on a full or part-time basis.

An Imaging Science Curriculum Packed with High-Demand Skills

The MS degree in Imaging Science curriculum emphasizes a systems approach to the study of imaging science. With a background in science or engineering, this degree will prepare you for positions in research, product development, and management in the imaging industry. The curriculum was developed in collaboration with industry partners to emphasize skills needed by their scientists, engineers, and managers. You may concentrate on one of several “system tracks,” or customize your own track. You may choose to complete either a research thesis or a project and a paper in the non-thesis option. You may also perform your thesis research at your place of employment.

- Research: Graduates apply their knowledge to research in areas of astronomy and space science, cultural artifact and document imaging, nanoimaging and materials, optics, remote sensing, and vision.
- Careers: Graduates work in various research and applied roles like Imaging Scientist, Imaging Systems Scientist, Imaging Systems Engineer, and Systems Engineer.
- Systems: Employers appreciate the ability of our graduates to apply the imaging chain towards a full systems perspective.
- Biomedical: Graduates are well prepared to contribute to both research and applied work in biomedical systems.

Research Thesis Option: The research thesis is based on experimental evidence obtained by the student in an appropriate field, as arranged between the student and their adviser. The minimum number of thesis credits required is four and may be fulfilled by experiments in the university’s laboratories. In some cases, the requirement may be fulfilled by work done in other laboratories or the student’s place of employment, under the following conditions:

1. The results must be fully publishable.
2. The student’s advisor must be approved by the graduate program coordinator.
3. The thesis must be based on independent, original work, as it would be if the work were done in the university’s laboratories.

Faculty within the Chester F. Carlson Center for Imaging Science supervise thesis research in areas of the physical properties of radiation-sensitive materials and processes, digital image processing, remote sensing, nanoimaging, electro-optical instrumentation, vision, computer vision, color imaging systems, and astronomical imaging. Interdisciplinary efforts are possible with the Kate Gleason College of Engineering and the College of Science.

Graduate Paper/Project Option: Students with demonstrated practical or research experience, approved by the graduate program coordinator, may choose the graduate project option (3 credit hours). This option takes the form of a systems project course. The graduate paper is normally performed during the final semester of study. Both part- and full-time students may choose this option, with the approval of the graduate program coordinator.

Imaging Science Careers

Our imaging science graduates are in high demand across many government and industrial sectors including the mobile phone industry, consumer electronics, aerospace, precision agriculture and remote sensing, national defense, and a wide array of other application areas. Many of our students work in industry on internships during their graduate career at RIT, further expanding their education. Recent students have been hired as either interns or in permanent positions by companies such as Apple, Google, Motorola, Lockheed Martin, L3Harris, Corning, Los Alamos National Laboratory, MITRE Corporation, and many others.

Experiential Learning

Cooperative Education

What makes an RIT science and math education exceptional? It’s the ability to complete science and math co-ops and gain real-world experience that sets you apart. Co-ops in the College of Science include cooperative education and internship experiences in industry and health care settings, as well as research in an academic, industry, or national lab. These are not only possible at RIT, but are passionately encouraged.

What makes an RIT education exceptional? It’s the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

National Labs Career Events and Recruiting

The Office of Career Services and Cooperative Education offers National Labs and federally-funded Research Centers from all research areas and sponsoring agencies a variety of options to connect with and recruit students. Students connect with employer partners to gather information on their laboratories and explore co-op, internship, research, and full-time opportunities. These national labs focus on scientific discovery, clean energy development, national security, technology advancements, and more. Recruiting events include our university-wide Fall Career Fair, on-campus and virtual interviews, information sessions, 1:1 networking with lab representatives, and a National Labs Resume Book available to all labs.

Admission requirements

This program is available on-campus or online.

On Campus

Offered Full-time
Full-time Admit Term(s): Fall or Spring
Full-time Application Deadline: Fall – January 15 priority deadline, rolling thereafter; Spring – rolling
Full-time STEM Designated: Yes
Offered Part-time
Part-time Admit Term(s): Fall or Spring
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Online

Offered Part-time
Part-time Admit Term(s): Fall or Spring
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Imaging Science program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: GRE optional but recommended. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores
International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 100
- IELTS: 7.0
- PTE Academic: 70

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

### Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

### Additional Information

#### Prerequisites

Applicants must have completed courses in mathematics (through calculus and including differential equations), and a full year of calculus-based physics (including modern physics). It is assumed that students can write a common computer program.

#### Online Degree Information

The online Imaging Science MS program is designed for part-time study and can be completed fully online. It is flexible for working professionals. Students typically say they spend between 10-12 hours per week on their classes and take one class per term. Most students finish in about 2.5 years but can be expedited if you study year-round and take more than one class each semester. For specific details about the delivery format and learning experience, contact the Program Contact listed on this page. RIT does not offer student visas for online study.

#### Online Tuition Eligibility

*The online Imaging Science MS is a designated online degree program that is billed at a 43% discount from our on-campus rate. View the current online tuition rate.*

### Imaging Science, Ph.D.

[www.rit.edu/study/imaging-science-phd](http://www.rit.edu/study/imaging-science-phd)

**Charles Bachmann, Professor**

585-475-7238, cmbpci@rit.edu

#### Program overview

The Ph.D. in imaging science signifies high achievement in scholarship and independent investigation in the diverse aspects of imaging science. Students contribute their fundamental body of knowledge in science and engineering that is associated with this field of study. As an imaging Ph.D. candidate, you’ll acquire the capabilities, skills, and experience to continue to expand the limits of the discipline and meet future scholarly, industrial, and government demands on the field.

Candidates for the doctoral degree must demonstrate proficiency by:

- Successfully completing course work, including a core curriculum, as defined by the student’s plan of study;
- Passing a series of examinations; and
- Completing an acceptable dissertation under the supervision of the student’s research advisor and dissertation committee.

#### Plan of Study

All students must complete a minimum of 60 credit hours of course work and research. The core curriculum spans and integrates a common body of knowledge essential to an understanding of imaging processes and applications. Courses are defined by the student’s study plan and must include core course sequences plus a sequence in a topical area such as remote sensing, digital image processing, color imaging, digital graphics, electro-optical imaging systems, and microlithographic imaging technologies.

Students may take a limited number of credit hours in other departments and must complete research credits including two credits of research associated with the research seminar course, Graduate Seminar.

Graduate elective courses offered by the Chester F. Carlson Center for Imaging Science (and other RIT academic departments in fields closely allied with imaging science) allow students to concentrate their studies in a range of imaging science research and imaging application areas, including electro-optical imaging, digital image processing, color science, perception and vision, electrophotography, lithography, remote sensing, medical imaging, electronic printing, and machine vision.

#### Advancement to Candidacy

Advancement to candidacy occurs through the following steps:

- Advisor selection
- Submission and approval of a preliminary study plan
- Passing a written qualifying exam
- Study plan revision based on the outcome of qualifying exam and adviser recommendation
- Research committee appointment
- Candidacy exam based on thesis proposal

Following the qualifying exam, faculty decide whether a student continues in the doctoral program or if the pursuit of an MS degree or other program option is more acceptable. For students who continue in the doctoral program, the student’s plan of study will be revised, a research committee is appointed, candidacy/proposal exams are scheduled, and, finally, a dissertation defense is presented.

#### Research Committee

Prior to the candidacy exam, the student, in consultation with an advisor, must present a request to the graduate program coordinator for the appointment of a research committee. The committee is composed of at
least four people: an advisor, at least one faculty member who is tenured (or tenure-track) and whose primary affiliation is the Carlson Center for Imaging Science (excluding research faculty), a person competent in the field of research who is an RIT faculty member or affiliated with industry or another university and has a doctorate degree, and the external chair. The external chair must be a tenured member of the RIT faculty who is not a faculty member of the center and who is appointed by the dean of graduate education. The committee supervises the student’s research, beginning with a review of the research proposal and concluding with the dissertation defense.

**Research Proposal**
The student and their research advisor select a research topic for the dissertation. Proposed research must be original and publishable. Although the topic may deal with any aspect of imaging, research is usually concentrated in an area of current interest within the center. The research proposal is presented to the student’s research committee during the candidacy exam at least six months prior to the dissertation defense.

**Final Examination of the Dissertation**
The research advisor, on behalf of the student and the student’s research committee, must notify the graduate program coordinator of the scheduling of the final examination of the dissertation by forwarding to the graduate program coordinator the title and abstract of the dissertation and the scheduled date, time, and location of the examination. The final examination of the dissertation may not be scheduled within six months of the date on which the student passed the candidacy exam (at which the thesis proposal was presented and approved).

Barring exceptional circumstances (requiring permission from the graduate program coordinator), the examination may not be scheduled sooner than four weeks after formal announcement (i.e. center-wide hallway postings and email broadcast) has been made of the dissertation title and abstract and the defense date, time, and location.

The final examination of the dissertation is open to the public and is primarily a defense of the dissertation research. The examination consists of an oral presentation by the student, followed by questions from the audience. The research committee may also elect to privately question the candidate following the presentation. The research committee will immediately notify the candidate and the graduate program coordinator of the examination result.

**Residency**

All students in the program must spend at least two consecutive semesters (summer excluded) as resident full-time students to be eligible to receive the doctoral degree. If circumstances warrant, the residency requirement may be waived via petition to the graduate program coordinator, who will decide on the student’s petition in consultation with the advisor and graduate faculty. The request must be submitted at least nine months prior to the thesis defense.

**Maximum Time Limit**

University policy requires that doctoral programs be completed within seven years of the date of the student passing the qualifying exam. Bridge courses are excluded.

All candidates must maintain continuous enrollment during the research phase of the program. Such enrollment is not limited by the maximum number of research credits that apply to the degree. Normally, full-time students complete the course of study for the doctorate in approximately three to five years. A total of seven years is allowed to complete the degree after passing the qualifying exam.

---

### National Labs Career Fair

Hosted by RIT’s Office of Career Services and Cooperative Education, the National Labs Career Fair is an annual event that brings representatives to campus from the United States’ federally funded research and development labs. These national labs focus on scientific discovery, clean energy development, national security, technology advancements, and more. Students are invited to attend the career fair to network with lab professionals, learn about opportunities, and interview for co-ops, internships, research positions, and full-time employment.

**Admission requirements**

This program is available on-campus only.

Offered Full-time

Full-time Admit Term(s): Fall

Full-time Application Deadline: January 15 priority deadline, rolling thereafter

Full-time STEM Designated: Yes

Full-time study is 9+ semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

**Application Details**

To be considered for admission to the Imaging Science program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college in the physical sciences, mathematics, computer science, or engineering.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a statement of purpose for research which will allow the Admissions Committee to learn the most about you as a prospective researcher.
- Submit two letters of recommendation.
- Entrance exam requirements: GRE optional but recommended. No minimum score requirement.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

**English Language Test Scores**

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 100
- IELTS: 7.0
- PTE Academic: 70

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

**Cost and Financial Aid**

An RIT graduate degree is an investment with lifelong returns. Ph.D. students typically receive full tuition and an RIT Graduate Assistantship that will consist of a research assistantship (stipend) or a teaching assistantship (salary).

www.rit.edu/study/materials-science-and-engineering-adv-cert

Scott Williams, Professor
585-475-3033, sawppr@rit.edu

Program overview

The advanced certificate in materials science and engineering is specially designed to establish a common base of materials-oriented knowledge for students with baccalaureate degrees in chemistry, chemical engineering, electrical engineering, mechanical engineering, physics, and related disciplines. The program provides a new intellectual identity to those interested in the study of advanced materials and offers a serious interdisciplinary learning experience in materials studies, crossing over the traditional boundaries of such classical disciplines as chemistry, physics, and electrical, mechanical, and microelectronic engineering.

The advanced certificate may be completed on a full- or part-time basis. Part-time students are normally limited to a maximum of two courses, or 6 credit hours, each semester.

Students who are interested in further study may apply the credits earned in their advanced certificate to the MS degree in materials science and engineering.

What is a Graduate Certificate?

A graduate certificate, also called an advanced certificate, is a selection of up to five graduate level courses in a particular area of study. It can serve as a stand-alone credential that provides expertise in a specific topic that enhances your professional knowledge base, or it can serve as the entry point to a master’s degree. Some students complete an advanced certificate and apply those credit hours later toward a master’s degree.

* Additional approved electives comprise graduate courses offered by programs in the College of Science, Kate Gleason College of Engineering, College of Engineering Technology, Golisano Institute for Sustainability, School of Individualized Studies, and the Saunders College of Business. Prerequisites for all approved electives include Graduate Standing and may require permission of instructor.

Admission requirements

This program is available on-campus only.

Offered Part-time

Part-time Admit Term(s): Fall or Spring

Part-time Application Deadline: Rolling

Part-time STEM Designated: No

Part-time study is 1-8 semester credit hours. RIT will not issue a student visa for advanced certificates.

Application Details

To be considered for admission to the Materials Science and Engineering program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college in chemistry, physics, chemical engineering, electrical engineering, mechanical engineering, or a related field.
- A recommended minimum cumulative GPA of 3.2 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 88
- IELTS: 6.5
- PTE Academic: 60

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.
Materials Science and Engineering, MS

www.rit.edustudy/materials-science-and-engineering-ms
Scott Williams, Professor
585-475-3033, sawppr@rit.edu

Program Overview

In the materials science master's degree you'll receive a serious interdisciplinary learning experience in materials studies, crossing over the traditional boundaries of such classical disciplines like chemistry, physics, and engineering.

The objectives of the materials science degree are threefold:

- With the advent of new classes of materials and instruments, the traditional practice of empiricism in the search for and selection of materials is rapidly becoming obsolete. Therefore, the program offers a serious interdisciplinary learning experience in materials studies, crossing over the traditional boundaries of such classical disciplines like chemistry, physics, and electrical, mechanical, and microelectronic engineering.
- The program provides extensive experimental courses in diverse areas of materials-related studies.
- The program explores avenues for introducing greater harmony between industrial expansion and academic training.

RIT's Materials Science Master's Degree

Our materials science master's degree spans across three colleges: Science, Engineering and Sustainability. This gives you broad access that is not found in other programs that might be in a single college. In addition, the applied nature of the research and our co-op connections are unrivaled.

- Take part in extensive experimental courses in diverse areas of materials-related studies.
- Explore avenues for introducing greater harmony between industrial expansion and academic training.
- Gain the independent thinking and project management skills to grow professionally and prepare yourself for a wide range of careers.

Materials Science and Engineering Master's Courses

The materials science degree includes three required core courses, graduate electives, and either a thesis or project.

Courses: The core courses are specially designed to establish a common base of materials-oriented knowledge for students with baccalaureate degrees in chemistry, chemical engineering, electrical engineering, mechanical engineering, physics, and related disciplines.

There also is an emphasis on experimental techniques, with one required experimental course as part of the curriculum. This aspect of the masters in materials science will enhance your confidence when dealing with materials-related problems.

Electives: Elective courses may be selected from advanced courses offered by the School of Chemistry and Materials Science or, upon approval, from courses offered by other RIT graduate programs. Elective courses are scheduled on a periodic basis. Transfer credit may be awarded based on academic background beyond the bachelor's degree or by examination, based on experience.

Thesis/Project: Choose to complete a thesis or a project as the conclusion to your program. If you pursue the thesis option, you will take four graduate electives, complete nine credit hours of research, and produce a thesis paper. Alternatively, the project option includes six graduate electives and a 3 credit hour project.

Part-Time Study: The materials science degree offers courses in the late afternoon and evenings to encourage practicing scientists and engineers to pursue the program without interrupting their employment. (This may not apply to courses offered off campus at selected industrial sites.) Students employed full time are normally limited to a maximum of two courses, or 6 credit hours, each semester. If you wish to register for more than 6 credit hours, then you must obtain the permission of your advisor.

Experiential Learning

Cooperative Education and Internships

What makes an RIT science and math education exceptional? It's the ability to complete science and math co-ops and gain real-world experience that sets you apart. Co-ops in the College of Science include cooperative education and internship experiences in industry and health care settings, as well as research in an academic, industry, or national lab. These are not only possible at RIT, but are passionately encouraged.

What makes an RIT education exceptional? It's the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

Co-ops and internships are encouraged for graduate students in the materials science degree.

National Labs Career Events and Recruiting

The Office of Career Services and Cooperative Education offers National Labs and federally-funded Research Centers from all research areas and sponsoring agencies a variety of options to connect with and recruit students. Students connect with employer partners to gather information on their laboratories and explore co-op, internship, research, and full-time opportunities. These national labs focus on scientific discovery, clean energy development, national security, technology advancements, and more. Recruiting events include our university-wide Fall Career Fair, on-campus and virtual interviews, information sessions, 1:1 networking with lab representatives, and a National Labs Resume Book available to all labs.

Admission requirements

This program is available on-campus only.

Offered Full-time

- Full-time Admit Term(s): Fall or Spring
- Full-time Application Deadline: Fall - February 15; Spring - Rolling
- Full-time STEM Designated: Yes

Offered Part-time

- Part-time Admit Term(s): Fall or Spring
- Part-time Application Deadline: Rolling
- Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Materials Science and Engineering program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college in chemistry, physics, chemical engineering, electrical engineering, mechanical engineering, or a related field.
- A recommended minimum cumulative GPA of 3.2 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 79
- IELTS: 6.5

Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. Mathematical Modeling, Ph.D.

www.rit.edu/study/mathematical-modeling-phd
Nathan Cahill, Associate Professor
585-475-5144, ndcsma@rit.edu

Program overview

Mathematical modeling is the process of developing mathematical descriptions, or models, of real-world systems. These models can be linear or nonlinear, discrete or continuous, deterministic or stochastic, and static or dynamic, and they enable investigating, analyzing, and predicting the behavior of systems in a wide variety of fields. Through extensive study and research, graduates of the mathematical modeling Ph.D. will have the expertise not only to use the tools of mathematical modeling in various application settings, but also to contribute in creative and innovative ways to the solution of complex interdisciplinary problems and to communicate effectively with domain experts in various fields.

Plan of Study

The degree requires at least 60 credit hours of course work and research. The curriculum consists of three required core courses, three required concentration foundation courses, a course in scientific computing and high-performance computing (HPC), three elective courses focused on the student's chosen research concentration, and a doctoral dissertation. Elective courses are available from within the School of Mathematics and Statistics as well as from other graduate programs at RIT, which can provide application-specific courses of interest for particular research projects. A minimum of 30 credits hours of course work is required. In addition to courses, at least 30 credit hours of research, including the Graduate Research Seminar, and an interdisciplinary internship outside of RIT are required.

Students develop a plan of study in consultation with an application domain advisory committee. This committee consists of the program director, one of the concentration leads, and an expert from an application domain related to the student’s research interest. The committee ensures that all students have a roadmap for completing their degree based on their background and research interests. The plan of study may be revised as needed. Learn more about our mathematical modeling doctoral students and view a selection of mathematical modeling seminars hosted by the department.

Qualifying Examinations

All students must pass two qualifying examinations to determine whether they have sufficient knowledge of modeling principles, mathematics, and computational methods to conduct doctoral research. Students must pass the examinations in order to continue in the Ph.D. program.

The first exam is based on the Numerical Analysis I (MATH-602) and Mathematical Modeling I, II (MATH-622, 722). The second exam is based on the student's concentration foundation courses and additional material deemed appropriate by the committee and consists of a short research project.

Dissertation Research Advisor and Committee

A dissertation research advisor is selected from the program faculty based on the student's research interests, faculty research interest, and discussions with the program director. Once a student has chosen a dissertation advisor, the student, in consultation with the advisor, forms a dissertation committee consisting of at least four members, including the dissertation advisor. The committee includes the dissertation advisor, one other member of the mathematical modeling program faculty, and an external chair appointed by the dean of graduate education. The external chair must be a tenured member of the RIT faculty who is not a current member of the mathematical modeling program faculty. The fourth committee member must not be a member of the RIT faculty and may be a professional affiliated with industry or with another institution; the program director must approve this committee member.

The main duties of the dissertation committee are administering both the candidacy exam and final dissertation defense. In addition, the dissertation committee assists students in planning and conducting their dissertation research and provides guidance during the writing of the dissertation.

Admission to Candidacy

When a student has developed an in-depth understanding of their dissertation research topic, the dissertation committee administers an examination to determine if the student will be admitted to candidacy for the doctoral degree. The purpose of the examination is to ensure that the student has the necessary background knowledge, command of the problem, and intellectual maturity to carry out the specific doctoral-level research project. The examination may include a review of the literature, preliminary research results, and proposed research directions for the completed dissertation. Requirements for the candidacy exam include both a written dissertation proposal and the presentation of an oral defense of the proposal. This examination must be completed at least one year before the student can graduate.

Dissertation Defense and Final Examination

The dissertation defense and final examination may be scheduled after the dissertation has been written and distributed to the dissertation committee and the committee has consented to administer the final examination. Copies of the dissertation must be distributed to all members of the dissertation committee at least four weeks prior to the final examination. The dissertation defense consists of an oral presentation of the dissertation research, which is open to the public. This public presentation must be scheduled and publicly advertised at least four weeks prior to the examination. After the presentation, questions will be fielded from the attending audience and the final examination, which consists of a private questioning of the candidate by the dissertation committee, will ensue. After the questioning, the dissertation committee immediately deliberates and thereafter notifies the candidate and the mathematical modeling graduate director of the result of the examination.

Residency

All students in the program must spend at least two consecutive semesters (summer excluded) as resident full-time students to be eligible to receive the doctoral degree.

Maximum Time Limitations

University policy requires that doctoral programs be completed within seven years of the date of the student passing the qualifying exam. All candidates must maintain continuous enrollment during the research phase of the program. Such enrollment is not limited by the maximum number of research credits that apply to the degree.

National Labs Career Fair

Hosted by RIT’s Office of Career Services and Cooperative Education, the National Labs Career Fair is an annual event that brings representatives to campus from the United States’ federally funded research and development labs. These national labs focus on scientific discovery, clean energy development, national security, technology advancements, and more. Students are invited to attend the career fair to network with
lab professionals, learn about opportunities, and interview for co-ops, internships, research positions, and full-time employment.

**Admission requirements**

This program is available on-campus only.

Full-time STEM Designated: Yes

Full-time study is 9+ semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

**Application Details**

To be considered for admission to the Mathematical Modeling program, candidates must fulfill the following requirements:

- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a statement of purpose for research which will allow the Admissions Committee to learn the most about you as a prospective researcher.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

**English Language Test Scores**

- International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

<table>
<thead>
<tr>
<th>Test</th>
<th>Minimum Required</th>

</thead>
<tbody>
<tr>
<td>TOEFL</td>
<td>100</td>
</tr>
<tr>
<td>IELTS</td>
<td>7.0</td>
</tr>
<tr>
<td>PTE Academic</td>
<td>70</td>
</tr>
</tbody>
</table>

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

**Cost and Financial Aid**

An RIT graduate degree is an investment with lifelong returns. Ph.D. students typically receive full tuition and an RIT Graduate Assistantship that will consist of a research assistantship (stipend) or a teaching assistantship (salary).

**Additional Information**

**Foundation Courses**

Mathematical modeling encompasses a wide variety of scientific disciplines, and candidates from diverse backgrounds are encouraged to apply. If applicants have not taken the expected foundational course work, the program director may require the student to successfully complete foundational courses prior to matriculating into the Ph.D. program. Typical foundation course work includes calculus through multivariable and vector calculus, differential equations, linear algebra, probability and statistics, one course in computer programming, and at least one course in real analysis, numerical analysis, or upper-level discrete mathematics.

Program overview

RIT’s Physics MS: Explore Advanced Physics Your Way

A physics master's prepares you for a variety of professional opportunities. Whether your interests are in quantum mechanics or studying the entire universe with general relativity, you can gain the research and technical skills needed to achieve your career goals.

Students in RIT’s physics MS program are trained in the core areas of physics and can choose sub-areas of physics that align with their interests and career aspirations. Sub-areas may include: atomic, molecular, and optical physics; computational physics; lasers; modern and quantum optics; nanoscale physics; physics education research; radiation, scattering, and spectroscopy; relativity and gravitation; solid-state, materials, and device physics; and soft matter and biological physics.

At RIT you don’t just study these areas, you work directly with faculty conducting research. The School of Physics and Astronomy conducts millions of dollars in research annually in experimental, theoretical, applied, and computational physics. Gain hands-on experience and put your knowledge into practice with access to our labs and equipment and as part of our strategic research centers.

You will also develop professional skills in organization and leadership, managing research teams, promoting innovation or sustainable technologies, entrepreneurship and intellectual property, finance and accounting, science, scientific visualization, electronics, STEM pedagogy and education research, public policy, and communication. The RIT physics master’s program offers robust, advanced training in a flexible format that allows you to meet your personal career goals.

Research Centers

Students and faculty researchers collaborate in our strategic research centers:

- Center for Computational Relativity and Gravitation
- Center for Detectors
- Future Photon Initiative
- Laboratory for Multiwavelength Astrophysics

Labs and Equipment

Students in the physics MS have access to an extensive range of equipment and labs:

- Atomic-Scale Microscopy Laboratory
- Granular Materials Laboratory
- Iontronics and NanoElectronics Laboratory
- Laboratory for Complex and Biological Fluid Studies
- Laboratory for Experimental Cosmology
- Laser Light Scattering Equipment
- Materials Laboratory
- Nanopower Research Laboratories
- Quantum Optics/Imaging Laboratory
- RIT Observatory
- Supercomputer Clusters
- X-Ray and Surface Science Laboratory

Careers in Physics

Nationally, graduates of the program are in demand across all economic sectors, spanning a wide variety of exciting opportunities within the private sector (especially in engineering and computer/information technology), in government labs and agencies, and in education at both the university and secondary levels.

Experiential Learning

Cooperative Education

What makes an RIT science and math education exceptional? It's the ability to complete science and math co-ops and gain real-world experience that sets you apart. Co-ops in the College of Science include cooperative education and internship experiences in industry and health care settings, as well as research in an academic, industry, or national lab. These are not only possible at RIT, but are passionately encouraged.

What makes an RIT education exceptional? It's the ability to complete relevant, hands-on career experience. At the graduate level, and paired with an advanced degree, cooperative education and internships give you the unparalleled credentials that truly set you apart. Learn more about graduate co-op and how it provides you with the career experience employers look for in their next top hires.

National Labs Career Events and Recruiting

The Office of Career Services and Cooperative Education offers National Labs and federally-funded Research Centers from all research areas and sponsoring agencies a variety of options to connect with and recruit students. Students connect with employer partners to gather information on their laboratories and explore co-op, internship, research, and full-time opportunities. These national labs focus on scientific discovery, clean energy development, national security, technology advancements, and more. Recruiting events include our university-wide Fall Career Fair, on-campus and virtual interviews, information sessions, 1:1 networking with lab representatives, and a National Labs Resume Book available to all labs.

Admission requirements

This program is available on-campus only.

Offered Full-time

Full-time: Admit Term(s): Fall; Spring may be considered
Full-time Application Deadline: Fall: February 15 priority deadline, rolling thereafter; Spring: rolling
Full-time STEM Designated: Yes

Offered Part-time

Part-time Admit Term(s): Fall; Spring may be considered
Part-time Application Deadline: Rolling
Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

Application Details

To be considered for admission to the Physics program, candidates must fulfill the following requirements:

• Complete an online graduate application.
• Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
• Hold a baccalaureate degree (or US equivalent) from an accredited university or college in physics, applied physics, or a closely-related discipline within the physical/mathematical sciences or engineering fields.
• A recommended minimum cumulative GPA of 3.0 (or equivalent).
• Submit a current resume or curriculum vitae.
• Submit a personal statement of educational objectives.
• Submit two letters of recommendation.
• Entrance exam requirements: GRE required. No minimum score requirement.
• Writing samples are optional.
• Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

English Language Test Scores

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

TOEFL: 100
IELTS: 7.0
PTE Academic: 70

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.
Cost and Financial Aid

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.
Faculty

Dean’s Office

André O. Hudson, BS, Virginia Union University; Ph.D., Rutgers University—Dean; Professor, Biology; amino acid metabolism, bacterial cell wall metabolism, plant-bacterial interactions

Bioinformatics

Gregory Babbitt, BA, Ohio Wesleyan University; MS, Ph.D., University of Florida—Associate Professor: evolution of the biophysical properties of whole genomes and their interactions with DNA binding proteins

Elle M. Barnes, BA, New York University; Ph.D., Fordham University—Assistant Professor: Creation and maintenance of host-associated microbiomes, Integration of ecological theory with molecular and computational methods

Elí Borrego, BS, Ph.D., Texas A&M University—Assistant Professor: plant biochemistry and pathology

Larry Buckley, BA, University of Missouri; MS, Southern Illinois University at Edwardsville; Ph.D., Southern Illinois University at Carbondale—Senior Associate Dean for Academic Affairs; Associate Professor, Biology: herpetology, anatomy, evolution, biogeography, systematics

Feng Cui, MS, Truman State University; Ph.D., Iowa State University; MD, Hunan Medical University (China)—Graduate Program Director, Bioinformatics; Associate Professor, Bioinformatics: next-generation sequencing data analysis, chromatin organization, epigenomics, cancer genomics and p53-DNA interactions

André O. Hudson, BS, Virginia Union University; Ph.D., Rutgers University—Dean, College of Science; Professor, Biology: amino acid metabolism, bacterial cell wall metabolism, plant-bacterial interactions

Michael V. Osier, BS, University of Vermont; Ph.D., Yale University—Associate Professor; Bioinformatics: high-throughput sequencing analysis, human genetics

Elena Lopez Peredo, BS, Ph.D., University of Oviedo (Spain)—Assistant Professor: Adaptations between terrestrial and aquatic lifestyles during plant evolution, microbial communities, ecosystems

Gary R. Skuse, BA, University of Rochester; Ph.D., Syracuse University—Professor; Bioinformatics: cancer genetics, RNA processing, natural language processing to mine the scientific and medical literature, computer networking, wired and wireless communications

Hyla C. Sweet, BS, Union College; Ph.D., University of Texas at Austin—Associate Professor, Biology: Genomics/transcriptomics of invertebrates

Julie A. Thomas, B. App. Sc., Ph.D., LaTrobe University. Bendingo (Australia)—Associate Professor, virology, phage genetics and genome structure, phage gene expression

Crista Wadsworth, BA, Smith College; Ph.D., Tufts University—Assistant Professor, microbial evolution, populations dynamics and genomics.

Environmental Science

Elí Borrego, BS, Texas A&M University, Ph.D., Texas A&M University—Assistant Professor, Biology: plant biochemistry and pathology

Larry Buckley, BA, University of Missouri; MS, Southern Illinois University at Edwardsville; Ph.D., Southern Illinois University at Carbondale—Senior Associate Dean for Academic Affairs; Associate Professor, Biology: herpetology, anatomy, evolution, biogeography, systematics

Sandra Connelly, BS, Juniata College; MS, University at Buffalo; Ph.D., Miami University of Ohio—Principal Lecturer, Biology: ecotoxicology, freshwater ecosystems, anthropogenic stresses, UV-radiation, evolution

Elizabeth N. Hane, BA, Rice University; MA, University of Kansas; Ph.D., Brown University—Professor, Biology: plant community ecology, ecosystem biology, conservation biology

M. Ann Howard, BS, Cornell University; J.D., Rutgers University School of Law—Professor, College of Liberal Arts, Science, Technology and Society/Public Policy: relationship between environmental decision-making and the role of citizen involvement, sustainable community development

André O. Hudson, BS, Virginia Union University; Ph.D., Rutgers University—Dean, College of Science; Professor, Biology: amino acid metabolism, bacterial cell wall metabolism, plant-bacterial interactions

Christine Keiner, BA, McDaniel College; Ph.D., Johns Hopkins University—Associate Professor, College of Liberal Arts, Science, Technology and Society/Public Policy: history of ecology and biology, U.S. environmental politics, and relations between science and politics

Karl F. Korfmarcher, MA, Carleton College; MS, Ph.D., Duke University—Professor, Environmental Science: GIS-based habitat suitability, transportation, hydrologic, and pollution modelling, green infrastructure land cover analysis, soil science

Carmedy K. McCalley, BA, Middlebury College; Ph.D., Cornell University—Graduate Program Director, Environmental Science; Associate Professor, Environmental Science: biogeochemistry, global change biology, terrestrial and wetland ecosystem ecology

Susan Smith Pagano, BA, State University College at Oswego; MS, State University College at Brockport; Ph.D., University of Rhode Island—Associate Professor, Biology: avian nutritional ecology and migration physiology

Todd Pagano, BA, State University College at Oswego; MS, Ph.D., Tufts University—Professor, Chemistry/Laboratory Science Technology: aquatic chemistry, environmental chemistry, sensor/instrument design, environmental monitoring

Olalekan Babaniyi, BSE, MS, Emporia State University; Ph.D., Oklahoma State University—Associate Professor, Biology: ecological informatics, conservation of amphibians and reptiles, behavioral and evolutionary ecology

Kaitlin Stack-Whitney, BS, Cornell University; Ph.D., University of Wisconsin-Madison—Assistant Professor, Biology: insects, ecology, novel ecosystems, environmental policy, critical open studies, animal studies, and pollinators

Anna Christina Tyler, BS, Cornell University; MS, Ph.D., University of Virginia—Professor, Environmental Science and Biology: aquatic ecology, biogeochemistry, invasive species, ecosystem restoration

Jan van Aardt, BSc, University of Stellenbosch (South Africa); MS, Ph.D., Virginia Polytechnic Institute and State University—Professor, Imaging Science: remote sensing of natural resources, application of hyperspectral, light detection and ranging for spectral- structural characterization of natural systems, integrated modeling approaches, scaling of natural resources remote sensing solutions through sensor interoperability

Jeffrey Wagner, AB, University of Missouri at Columbia; MS, Ph.D., University of Illinois-Urbana—Professor, College of Liberal Arts, Economics: sustainable waste management, green consumption, economics of active transportation, economics of endangered species recovery

Applied and Computational Mathematics, Applied Statistics

Anurag Agarwal, MS, Indian Institute of Technology (India); Ph.D., State University of New York at Buffalo—Associate Professor, number theory, cryptography, algebra, graph theory

Ephraim Agyingi, BS, MS, University of Ilorin (Nigeria); Ph.D., University of Manchester (United Kingdom)—Associate Professor, numerical analysis

Olaekan Babaniyi, BS, MS, Ph.D., Boston University—Assistant Professor, inverse problems, computational mechanics, biomechanical imaging, uncertainty quantification
Lucia Carichino, BS, MS, Politecnico di Milano (Italy); Ph.D., Purdue University—Assistant Professor, mathematical modeling, scientific computing

Linlin Chen, BS, Beijing University (China); MCS, Rice University; MA, Ph.D., University of Rochester—Associate Professor, statistics, biostatistics, statistical consulting, genetics, bioinformatics and computational biology

Matthew Coppenbarger, BS, University of Arizona; MA, Ph.D., University of Rochester—Associate Professor, mathematical physics, spectral theory

Michael Cromer, BS, York College of Pennsylvania; MS, Ph.D., University of Delaware—Associate Professor, mathematical modeling of complex fluids, asymptotics and perturbation methods, simulation

Blessing Emerenini, BTech, Federal University of Technology (Nigeria); M.Sc., Technical University Eindhoven (Netherlands); M.Eng., Johannes Kepler University (Austria); Ph.D., University of Guelph (Canada)—Assistant Professor, mathematical modeling, mathematical biology

Joshua Faber, BS, State University of New York at Stony Brook; Ph.D., Massachusetts Institute of Technology—Head, School of Mathematics and Statistics; Professor, numerical relativity, computational astrophysics, dynamics

Raluca Felea, BS, University of Iasi (Romania); Ph.D., University of Rochester—Professor, microlocal analysis

Ernest Fokoue, Maitrise B.Sc., University of Yaounde (Cameroon); M.Sc., Aston University (United Kingdom); Ph.D., University of Glasgow (United Kingdom)—Professor, statistical machine learning and data mining

Teresa Gibson, BS, Carnegie-Mellon University; MS, MA, Ph.D., University of Michigan—Professor of Practice, advanced analytic methods, machine learning

Anthony A. Harkin, BS, State University College at Brockport; MS, Massachusetts Institute of Technology; Ph.D., Boston University—Associate Professor, applied and computational mathematics, partial differential equations

Matthew J. Hoffman, BA, Williams College; MS, Ph.D., University of Maryland—Professor, data assimilation, applied mathematics, ocean and atmospheric forecasting, remote sensing; hyperspectral vehicle tracking

Jay Alan Jackson, BS, MS, Ph.D., Florida State University—Associate Professor, mathematical modeling, innovative and interdisciplinary math and science education

Jobby Jacob, BS, Bharata Mata College (India); MS, Indian Institute of Technology (India); MS, Ph.D., Clemson University—Associate Professor, graph theory

Baasansuren Jadamba, BS, National University of Mongolia (Mongolia); MS, University of Kaiserslauern (Germany); Ph.D., University of Erlangen-Nuremberg (Germany)—Professor, partial differential equations, inverse problems, numerical optimization

Akhtar Khan, MS, Technical University Kaiserslauern (Germany); Ph.D., Michigan Technological University—Professor, applied math, optimization, inverse problems, variational inequalities, elasticity imaging

Seshadhri Kumar, MS, MS, University of Madras (India); Ph.D., University of Delaware—Professor, operations research, simulation

Manuel Lopez, AB, Princeton University; Ph.D., Wesleyan University—Associate Professor, homological algebra

Carlos Lousto, MS, Universidad Nacional De La Plata (Argentina); Ph.D., Universidad De Buenos Aires (Argentina)—Professor, numerical relativity

Carl V. Lutzer, BS, Michigan State University; MA, PhD, University of Kentucky—Director, Honors Program; Professor, mathematical physics

Peter Bajorski, MS, University of Wroclaw (Poland); Ph.D., Technical University of Wroclaw (Poland)—Professor, regression models, multivariate analysis, nonparametrics, statistical approaches to spectral image processing

Mihail Barbosu, BS, Ph.D., Babes-Bolyai University (Romania); MS, Ph.D., Paris VI University (France)—Associate Head and Graduate Program Director, Applied Statistics; Professor, mathematical modeling, dynamical systems, celestial mechanics and space dynamics, symbolic computation systems, data analytics, management science

Nathaniel Barlow, BS, Ph.D., Clarkson University—Undergraduate Program Coordinator, Applied and Computational Mathematics; Associate Professor, stability and propagation of waves in fluids, asymptotic methods

Maurino P. Bautista, BS, Ateneo de Manila University (Philippines); MS, Ph.D., Purdue University—Professor, numerical analysis, applied mathematics

Bernard Brooks, BS, University of Toronto (Canada); MBA, Rochester Institute of Technology; MS, Ph.D., University of Guelph (Canada)—Associate Head, School of Mathematics and Statistics; Professor, mathematical modeling, dynamical systems, financial mathematics

Nathan Cahir, BS, MS, Rochester Institute of Technology; D.Phil., University of Oxford (United Kingdom)—Graduate Program Director, Mathematical Modeling; Professor, Mathematics: scientific computing, biomedical image analysis, computer vision, advanced mathematical approaches to image processing

Manuela Campanelli, Laureate in Mathematics, University of Perugia (Italy); Ph.D., University of Bern (Switzerland)—Director, Center for Computational Relativity and Gravitation; Professor, Mathematics: numerical relativity, gravitational physics, computational astrophysics, black holes, gravitational waves

Kara L. Maki, BS, University of New Hampshire; MS, Ph.D., University of Delaware—Graduate Program Director, Applied and Computational Mathematics; Associate Professor, mathematical modeling, scientific computing

Nishant Malik, BS, MS, University of Delhi (India); Ph.D., University of Potsdam (Germany)—Assistant Professor, network science, nonlinear dynamics, stochastic processes

Carol E. Marchetti, BS, Case Institute of Technology; MS, Weatherhead School of Management; MA, Ph.D., University of Rochester—Professor, statistics

James E. Marengo, BA, MS, California State University; Ph.D., Colorado State University—Professor, statistics, probability

Nonhle Channon Mdziniso, B.Sc., University of Swaziland (Eswatini); MA, Marshall University; Ph.D., Central Michigan University—Assistant Professor, probability distributions theory and applications, statistical modeling; parametric and nonparametric regression, data mining, machine learning

Laura M. Munoz, BS, California Institute of Technology; Ph.D., University of California at Berkeley—Associate Professor, mathematical biology, dynamical systems, applied control theory

Darren A. Narayan, BS, State University of New York at Binghamton; MS, Ph.D., Lehigh University—Professor, graph theory, discrete math

Shahla Nasserasr, Honours B.Sc., Tabriz University (Iran); M.Sc., Shahid Beheshti University (Iran); M.Sc., University of Victoria (Canada); Ph.D., College of William and Mary—Assistant Professor, discrete mathematics, graph theory

Richard O’Shaughnessy, BA, Cornell University; Ph.D., California Institute of Technology—Associate Professor, gravitational wave astrophysics

Niels F. Otani, BA, University of Chicago; Ph.D., University of California at Berkeley—Associate Professor, mathematical biology
Robert J. Parody, BS, Clarkson University; MS, Rochester Institute of Technology; Ph.D., University of South Carolina—Associate Professor, experimental design, response surface methods, quality control and improvement

Michael Radin, BA, Rowan University; MS, Ph.D., University of Rhode Island—Associate Professor, differential equations

Mary Lynn Reed, BS, Georgia Institute of Technology; MFA, University of Maryland; Ph.D., University of Illinois—Professor, abstract algebra, network science, cybersecurity, statistical modeling

Brendan Rooney, BSc, Simon Fraser University (Canada); MS, Ph.D., University of Waterloo (Canada)—Assistant Professor, graph theory, combinatorics

Hossein Shahmohamad, BS, MA, California State University at Long Beach; Ph.D., University of Pittsburgh—Professor, graph theory

Nourridine Siewe, Honors BS, MS, University of Buea (Cameroon); Howard University—Assistant Professor, mathematical modeling, mathematical epidemiology

Wanda Szpunar-Lojasiewicz, BS, Jagiellonian University (Poland); MS, Ph.D., University of Cracow (Poland)—Associate Professor, analysis, multi-variable and vector calculus

John T. Whelan, BA, Cornell University; Ph.D., University of California at Santa Barbara—Professor, computational relativity and gravitation, gravitational wave data analysis

Tamas Wiandt, BS, Joszef Attila University (Hungary); Ph.D., University of Minnesota—Professor, dynamical systems

Anthony E. Wong, BA, Ohio Wesleyan University; MS, Ph.D., University of Colorado, Boulder—Assistant Professor, data assimilation, model calibration, geophysical models

Elmer L. Young, BA, Amherst College; MS, Ph.D., The Ohio State University—Associate Professor, topology and analysis

Yosef Zlochower, BS, Ph.D., University of Pittsburgh—Professor, numerical relativity, relativistic astrophysics, black hole physics

Chemistry

Emiliano Brini, BS, MS, Bologna University (Italy); Ph.D., TU Darmstadt (Germany)—Assistant Professor, Physical Chemistry and Biochemistry: molecular dynamics simulations, protein to protein interactions, free energy calculations

Jeremy Cody, BS, Indiana University of Pennsylvania; Ph.D., University of Rochester—Associate Professor, Organic Chemistry: synthetic organic chemistry

Christina Goudreau Collin, BA, Colby College; Ph.D., University of Rochester—Professor, Organic Chemistry: synthetic organic chemistry, chemical education

Christopher Collison, BSc, Ph.D., Imperial College of London (United Kingdom)—Professor, Physical Chemistry: photovoltaic chemistry

Paul A. Craig, BS, Oral Roberts University; Ph.D., University of Michigan—Professor, Biochemistry: computational biochemistry, biochemistry education

Nathan Eddingsaas, BS, University of Wisconsin, Stevens Point; Ph.D., University of Illinois at Urbana-Champaign—Graduate Program Director, Chemistry; Associate Professor, Analytical Chemistry: atmospheric chemistry

Michael Gleghorn, BS, Clarion University of Pennsylvania; Ph.D., Pennsylvania State University—Assistant Professor, Biochemistry, gene regulation, nucleic acids, molecular cell biology

Michael D. Heagy, AB, Franklin and Marshall College; Ph.D., University of Southern California, Los Angeles—Head, School of Chemistry and Materials Science; Professor, Physical Organic Chemistry: fluorescent probes, solar fuels, photocatalysis

Joseph P. Hornak, BS, Utica College of Syracuse University; MS, Purdue University; Ph.D., University of Notre Dame—Professor, Joint Appointment with Imaging Science, Physical Chemistry: magnetic resonance spectroscopies and imaging

André O. Hudson, BS, Virginia Union University; Ph.D., Rutgers University—Dean, College of Science; Professor, Affiliate member of Chemistry

Lea V. Michel, BA, Colgate University; Ph.D., University of Rochester—Professor, Biochemistry: structural biology, biophysics, vaccine development

Massoud J. Miri, BS, MS, Ph.D., University of Hamburg (Germany)—Associate Professor, Polymer Chemistry: polymerization mechanisms, polymer properties, catalysis

Suzanne O’Handley, BS, Rutgers University; MS, Ph.D., University of Rochester—Associate Professor, Biochemistry: cloning novel phosphatase families, novel antibiotic targets, enzyme-substrate specificity

Hans Schmitthenner, BS, Massachusetts Institute of Technology; Ph.D., Pennsylvania State University—Research Professor, Analytical and Organic Chemistry: imaging agent synthesis and analysis.

Gerald A. Takacs, BSc, University of Alberta (Canada); Ph.D., University of Wisconsin—Professor, Physical Chemistry: chemical kinetics, atmospheric chemistry, plasma chemistry, and photochemistry

Scott Williams, BS, Purdue University; Ph.D., Montana State University—Graduate Program Director, Materials Science and Engineering; Professor, Inorganic Chemistry: pharmaceutical quality assurance through application of point-of-care assays

Materials Science and Engineering

Jairo Diaz Amya, B.Sc., National University of Colombia, Bogota; Ph.D., Purdue University—Assistant Professor, Chemical Engineering: soft matter, biological systems, structural biology, controlling self-assembly of chiral cellulose nanocrystals

Mishkat Bhattacharya, B.Tech., Indian Institute of Technology (India); MA, Ph.D., University of Rochester—Professor, Physics: quantum optics, nanoscience, superconductivity

David A. Borkholder, BS, Rochester Institute of Technology; MS, Ph.D., Stanford University—Bausch and Lomb Professor of Microsystems Engineering

Christopher Collison, BS, Ph.D., Imperial College of London (United Kingdom)—Professor, Physical Chemistry: polymer chemistry, organic photovoltaics

Denis Cormier, BS, University of Pennsylvania; MS, State University of New York at Buffalo; Ph.D., North Carolina State University—Earl W. Brinkman Professor: additive manufacturing, rapid prototyping

Michael Cromer, BS, York College of Pennsylvania; MS, Ph.D., University of Delaware—Associate Professor, mathematical modeling of complex fluids, asymptotics and perturbation methods, simulation

Pratik P. Dholabhai, BS, MS, Maharaja Sayajirao University of Baroda (India); MS, Ph.D., University of Texas at Arlington—Associate Professor, Physics: computational condensed matter physics and materials science, materials by design, nanostructured materials, materials for energy technologies

Moumita Das, BS, MS, Jadavpur University (India); Ph.D., Indian Institute of Science—Professor, Physics: theoretical soft condensed matter, mechanical response of biological materials and living systems

Scott Franklin, BA, University of Chicago; Ph.D., University of Texas—Professor: granular materials

Thomas R. Gaborski, BS, Cornell University; MS, Ph.D., University of Rochester—Associate Professor, nanomaterials, separations, cellular mechanics

Gabrielle Gaustad, BS, Alfred University; MS, Ph.D., Massachusetts Institute of Technology—Associate Professor: sustainability, materials recovery
Sureendra K. Gupta, B.Tech., India Institute of Technology (India); MS, University of Notre Dame; Ph.D., University of Rochester—Professor, Mechanical Engineering: x-ray diffraction, atomic force microscopy, micromechanics modeling, digital image analysis

Richard K. Hailstone, BS, Northern Illinois University; MS, Indiana University—Associate Professor, Imaging Science: silver halide materials and processing, imaging materials

Joseph P. Hornak, BS, Utica College of Syracuse University; MS, Purdue University; Ph.D., University of Notre Dame—Professor, Chemistry, Physical Chemistry: magnetic resonance spectroscopy and imaging

Seth M. Hubbard, BS, Drexel University; MS, Case Western Reserve University; Ph.D., University of Michigan—Professor, Physics: epitaxial crystal growth, growth and characterization of nanomaterials, high-efficiency photovoltaic devices, semiconductor device design and fabrication, thin films

Patricia Iglesias Victoria, BS, Ph.D., Polytechnic University of Cartagena (Spain)—Associate Professor: ionic liquids, tribology

Michael A. Jackson, BS, MS, Ph.D., State University of New York at Buffalo—Associate Professor, Microelectronic Engineering: microelectronic device design, fabrication, and test; material characterization techniques, surface analytical instrumentation; vacuum processing, including CVD, plasma, and ion beam techniques, micromachining, ferroelectric thin films, amorphous silicon and polycrystalline film deposition and characterization

Karuna Koppula, B.Tech., Andhra University (India); MS, University of New Hampshire; Ph.D., Michigan State University—Senior Lecturer, Chemical Engineering: turbulent flow modeling, multiphase flow in Pulse jet mixers

Michael Kotlarchyk, BS, MS, Ph.D., Massachusetts Institute of Technology—Head, School of Physics and Astronomy; Professor, Physics: characterization of structure and phase transitions in surfactant systems (micelles, microemulsions, and liquid crystals) using scattering techniques; mass and surface fractals in condensed matter systems, theories of liquids; chaos in simple nonlinear physical systems

Santosh Kurinen, BS, MS, Ph.D., University of Delhi (India)—Professor, Microelectronic Engineering: electronic materials and devices, IC processing, quantum and nanoscale devices

Kathleen Lamkin-Kennard, BS, Worcester Polytechnic Institute; MS, Ph.D., Drexel University—Associate Professor, Mechanical Engineering: biomedical engineering and biomaterials

Brian Landi, BS, MS, Ph.D., Rochester Institute of Technology—Professor, Chemical Engineering: batteries, nanomaterials, carbon nanotubes

Christopher Lewis, BS, Pennsylvania College of Technology; MS, University of Texas; Ph.D., University of Rochester—Assistant Professor, College of Engineering Technology: thermoplastics, polymers, shape memory, biodegradation

Casey Miller, BA, Wittenberg University; Ph.D., University of Texas at Austin—Associate Dean for Research and Faculty Affairs; Professor, Chemistry and Materials Science: thin film magnetism, spintronics, magnetocaloric effect

Massoud Miri, BS, MS, Ph.D., University of Hamburg (Germany)—Associate Professor, Chemistry: polymerization mechanisms, polymer properties, catalysis

Persian Mohseni, BS, Ph.D., McMaster University (Canada)—Assistant Professor, Microsystems Engineering: solid state physics, optoelectronics, materials characterization, nanoscale engineering and physical chemistry, synthesis paradigms for precise manipulation of material properties at the nanometer scale for next generation device technologies

Ali Ong, B.Ch.E., Hacettepe University (Turkey); MS, Ph.D., University of Maryland—Professor, Mechanical Engineering: polymer processing, heat and mass transfer, rheology, transport phenomena

Poornima Padmanabhan, B.Tech., Indian Institute of Technology, Madras (India); Ph.D., Cornell University—Assistant Professor, Chemical Engineering: self-assembly, thermodynamics, materials design, soft matter

Michael S. Pierce, BS, Rensselaer Polytechnic Institute; MS, Ph.D., University of Washington—Associate Professor, Physics: experimental physics, condensed matter physics, surface science, magnetism, x-ray science, and phase transitions

Poornima Padmanabhan, B.Tech., Indian Institute of Technology, Madras (India); Ph.D., Cornell University—Assistant Professor, Chemical Engineering: self-assembly, thermodynamics, materials design, soft matter

Sean L. Rommel, BS, Ph.D., University of Delaware—Professor, Microelectronic Engineering: emerging semiconductor devices, photonic devices, integration

Michael Schertz, B. Eng, Mgt., M.A.Sc., McMaster University (Canada); Ph.D., University of Toronto (Canada)—Associate Professor, Bioengineering and Microsystems

Michael Schrfl, BS, University of Pittsburgh; Ph.D., University of Pennsylvania—Assistant Professor, Bioengineering and Microsystems

Bruce Smith, BS, MS, Ph.D., Rochester Institute of Technology—Professor, Microelectronic Engineering: 193 nm lithography, multilayer resist processing, attenuated phase shift mask materials

Patricia Taboada-Serrano, BS, Mayor de San Andres University (Bolivia); MS, Simon Bolivar University (Venezuela); Ph.D., Georgia Institute of Technology—Associate Professor, Chemical Engineering: titanium dioxide nanotubes, electroosorption, sustainable energy for underserved populations

Gerald A. Takacs, BS, University of Alberta (Canada); Ph.D., University of Wisconsin—Professor, Chemistry: physical chemistry, chemical kinetics, photochemistry, atmospheric chemistry; plasma etching and modification of materials

George Thurston, AB, Oberlin College; Ph.D., Massachusetts Institute of Technology—Graduate Program Director, Physics; Professor, Physics: biological and chemical physics, experimental and theoretical studies of phase transitions, physical and chemical basis of protein condensation diseases, nuclear magnetic resonance, light, x-ray, and neutron scattering

Obioma Uche, B.Sc., University of California, Berkeley—Ph.D., Princeton University—Visiting Assistant Professor, Chemical Engineering: surface dynamics, computational catalysis

Jayanti Venkataraman, BS, MS, Bangalore University (India); Ph.D., Indian Institute of Science (India)—Professor, Electrical Engineering: electromagnetic fields

Steven J. Weinstein, BS, University of Rochester; MS, Ph.D., University of Pennsylvania—Department Head; Professor, interfacing transport processes, hydrodynamic wave phenomena, applied mathematics

Scott Williams, BS, Purdue University; Ph.D., Montana University—Graduate Program Director, Materials Science and Engineering; Professor, College of Art and Design: printed electronics, bioactive paper technology, ink chemistry and formulation
Mishkat Bhattacharya, B.Tech., Indian Institute of Technology (India); MA, Ph.D., University of Rochester—Professor, Physics: quantum optics, quantum information, optomechanics, precision measurement, non-classical state engineering, cold atoms and molecules, superconducting quantum computing

Manuela Campanelli, Laureate in Mathematics, University of Perugia (Italy); Ph.D., University of Bern (Switzerland)—Director, Center for Computational Relativity and Gravitation; Professor, Mathematics: numerical relativity, computational astrophysics, black holes, gravitational waves

Moumita Das, BS, MS, Jadavpur University (India); Ph.D., Indian Institute of Science—Professor, Physics: theoretical soft condensed matter, mechanical response of biological materials and living systems

Pratik P. Dholabhai, BS, MS, Maharaja Sayajirao University of Baroda (India); MS, Ph.D., University of Texas at Arlington—Associate Professor, Physics: computational condensed matter physics and materials science, materials by design, nanostructured materials, materials for energy technologies

Joshua Faber, BS, State University of New York at Stony Brook; Ph.D., Massachusetts Institute of Technology—Head, School of Mathematics and Statistics; Professor, Mathematics: numerical relativity, computational astrophysics, dynamics

Scott Franklin, BA, University of Chicago; Ph.D., University of Texas—Director, Center for Advancing STEM Teaching, Learning & Evaluation; Professor, Physics: granular materials, physics education research

Edwin Hach III, BS, MS, St. Bonaventure University; Ph.D., University of Arkansas—Associate Professor, Physics: quantum theory, quantum optics, quantum information and computing

Gregory A. Howland, BA, Oberlin College; MA, Ph.D., University of Rochester—Assistant Professor, Physics: quantum photonic integrated circuits, high-dimensional quantum systems, quantum information, compressive sensing, few-photon imaging and ranging, fundamental tests of quantum mechanics

Seth Hubbard, BS, Drexel University; MS, Case Western Reserve University; Ph.D., University of Michigan—Graduate Program Director, Physics; Director, Nanopower Research Laboratory; Professor, Physics: next generation photovoltaic devices, nanomaterials, novel and wide bandgap semiconductors, semiconducting polymers and devices

Ahmad R. Kirmani, BS, MS, AM University (India); Ph.D., King Abdullah University of Science and Technology (Saudi Arabia)—Assistant Professor, Chemistry and Materials Science; solution-processed semiconductor electronics, printed electronics

Michael Kotlarchyk, BS, MS, Ph.D., Massachusetts Institute of Technology—Head, School of Physics and Astronomy; Professor, Physics: radiation scattering techniques, laser light scattering, small-angle neutron and x-ray scattering, photon correlation spectroscopy, structure and interactions in complex fluids, nuclear magnetic resonance

Santosh Kurinec, BS, MS, Ph.D., University of Delhi (India)—Professor, Microelectronic Engineering: electronic materials and devices, integrated circuit processing, quantum and nanoscale devices

Nicola Lanatà, B.Sc., Università degli studi di Pisa (Italy); M.Sc., Università di Pisa (Italy); Ph.D., International School for Advanced Studies (Italy)—Assistant Professor, Physics: theoretical condensed-matter physics, strongly-correlated quantum matter, machine learning approaches to quantum-embedding simulations, development of new theoretical and computational methods

Carlos Lousto, MS, Universidad Nacional De La Plata (Argentina); Ph.D., Universidad De Buenos Aires (Argentina)—Professor, Mathematics: numerical relativity, relativistic astrophysics, black hole physics, perturbation theory

Casey Miller, BA, Wittenberg University; Ph.D., University of Texas at Austin—Senior Associate Dean for Research and Faculty Affairs; Professor, Chemistry and Materials Science: thin film magnetism, spintronics, magnetocaloric effect

Lishibanya Mohapatra, BS, St. Stephen's College (India); MS, Indian Institute of Technology (India); Ph.D., Brandeis University—Assistant Professor, Physics: theoretical biological physics, size control in cellular structures

Parsian K. Mohseni, BS, Ph.D., McMaster University (Canada)—Associate Professor, Microsystems Engineering: solid state physics, optoelectronics, materials characterization, nanoscale engineering and physical chemistry, synthesis paradigms for precise manipulation of material properties at the nanometer scale for next generation device technologies

Richard O'Shaughnessy, BA, Cornell University; Ph.D., California Institute of Technology—Associate Professor, Mathematics: gravitational wave astronomy, numerical and general relativity

Shima Parsa Moghaddam, B.Sc., Iran University of Science and Technology (Iran); M.Sc., Tabriz University (Iran); Ph.D., Wesleyan University—Assistant Professor, Physics: soft matter, complex fluids, porous media, turbulence, transport, non-linear and chaotic dynamics

Vivek Narayanan, M.Sc., Indian Institute of Technology (India); MA, Ph.D., University of Texas—Senior Lecturer, Physics; mathematical and theoretical physics

Michael S. Pierce, BS, Rensselaer Polytechnic Institute; MS, Ph.D., University of Washington—Associate Professor, Physics: experimental condensed matter physics, surface and interface science, x-ray diffraction, coherent scattering, surface microscopy, applications for basic energy science

Stefan Preble, BS, Rochester Institute of Technology; Ph.D., Cornell University—Professor, Microsystems Engineering: integrated photonic circuits and devices, quantum silicon photonics

George Thurston, AB, Oberlin College; Ph.D., Massachusetts Institute of Technology—Graduate Program Director, Physics; Professor, Physics: biological and chemical physics, experimental and theoretical studies of phase transitions, physical and chemical basis of protein condensation diseases, nuclear magnetic resonance, light, x-ray, and neutron scattering

John T. Whelan, BA, Cornell University; Ph.D., University of California at Santa Barbara—Professor, Mathematics: quantum physics, gravitational wave data analysis, astrophysical relativity

Ke Xu, B.E., Zhejiang University (China); MS, Ph.D., University of Illinois at Chicago—Assistant Professor, Physics: low-dimensional materials-based electronic, iontronic, optoelectronic, and quantum devices

Michael D. Zemcov, BSc, University of British Columbia (Canada); Ph.D., Cardiff University (United Kingdom)—Associate Professor, Physics and Astronomy: experimental and observational cosmology, including cosmological structure formation, extragalactic background radiation, cosmic microwave background, near infra-red to submillimeter instrumentation

Yosef Zlochower, BS, Ph.D., University of Pittsburgh—Professor, Mathematics: numerical relativity, relativistic astrophysics, black hole physics

Benjamin M. Zwickl, BS, Purdue University; MS, Ph.D., Yale University—Associate Professor, Physics: physics education research, STEM education and workforce connections, optics and optomechanics
Astrophysical Sciences and Technology

Manuela Campanelli, Laureate in Mathematics, University of Perugia (Italy); Ph.D., University of Bern (Switzerland)—Director, Center for Computational Relativity and Gravitation; Professor, Mathematics: numerical relativity, computational astrophysics, black holes, gravitational waves

Joshua Faber, BS, State University of New York at Stony Brook; Ph.D., Massachusetts Institute of Technology—Head, School of Mathematics and Statistics; Professor, Mathematics: numerical relativity; general relativistic magnetohydrodynamics, relativistic astrophysics

Donald F. Figer, BA, Northwestern University; MS, University of Chicago; Ph.D., University of California—Professor, Center for Detectors: massive stars, massive star clusters, galactic center, imaging detectors

Jeyhan S. Kartaltepe, BA, Colgate University; MS, Ph.D., University of Hawaii—Director, Laboratory for Multiwavelength Astrophysics; Associate Professor, Physics and Astronomy: galaxy formation and evolution, galaxy mergers and interactions, galaxy morphology, infrared and submillimeter galaxies, active galactic nuclei

Joel H. Kastner, BS, University of Maryland; MS, Ph.D., University of California—Professor, Imaging Science: astronomical imaging, including x-ray, infrared and radio spectroscopy; young stars and planet formation; evolved stars and planetary nebulae

Michael T. Lam, BA, Colgate University; MS, Ph.D., Cornell University—Research Assistant Professor, Physics and Astronomy: pulsar timing arrays and gravitational waves, interstellar and intergalactic media, fast radio bursts and propagation effects, astronomical cyber-infrastructure

Carlos Lousto, MS, Universidad Nacional De La Plata (Argentina); Ph.D., Universidad De Buenos Aires (Argentina)—Professor, Mathematics: numerical relativity, relativistic astrophysics, black hole physics, perturbation theory

Zoran Ninkov, BSc, University of Western Australia (Australia); MS, Monash University (Australia); Ph.D., University of British Columbia (Canada)—Professor, Imaging Science: detector array development and characterization, development of novel astronomical instrumentation, studies of young stellar clusters, planetary detection

Jason Nordhaus, BA, BS, MS, Ph.D., University of Rochester—Associate Professor, Science and Mathematics, National Technical Institute for the Deaf: computational astrophysics, core-collapse supernovae, binary interactions, strongly magnetized compact objects, physics of common envelopes

Richard O’Shaughnessy, BA, Cornell University; Ph.D., California Institute of Technology—Associate Professor, Mathematics: gravitational wave astronomy, numerical and general relativity

Michael W. Richmond, BA, Princeton University; MA, Ph.D., University of California at Berkeley—Professor, Physics and Astronomy: observational astronomy, supernovae, variable stars, reduction of optical data, automatic telescopes

Andrew Robinson, BSc, Ph.D., University of Manchester (United Kingdom)—Graduate Program Director, Astrophysical Sciences and Technology; Professor, Physics and Astronomy: astronomy, active galactic nuclei, supernovae, stars, radio galaxies, high-redshift quasars

John T. Whelan, BA, Cornell University; Ph.D., University of California at Santa Barbara—Professor, Mathematics: quantum physics, gravitational wave data analysis, astrophysical relativity

Michael D. Zemcov, BSc, University of British Columbia (Canada); Ph.D., Cardiff University (United Kingdom)—Associate Professor, Physics and Astronomy: Experimental and observational cosmology, including cosmological structure formation, extragalactic background radiation, cosmic microwave background, near-infra-red to submillimeter instrumentation

Yosef Zlochower, BS, Ph.D., University of Pittsburgh—Professor, Mathematics: numerical relativity, relativistic astrophysics, black hole physics

Color Science

Mekides Assefa Abebe, BS, Mekelle University (Ethiopia); MS, Jean Monnet University (France); Ph.D., University of Poitiers (France)—Richard S. Hunter Professor; Visiting Assistant Professor, Program of Color Science

Mark D. Fairchild, BS, MS, Rochester Institute of Technology; MA, Ph.D., University of Rochester—Professor, Program of Color Science

Sue Farnand, BS, Cornell University; MS, Ph.D., Rochester Institute of Technology—Graduate Program Director, Program of Color Science

Elena Fedorovskaya, MS, Ph.D., Lomonosov Moscow State University (Russia)—Research Professor, Program of Color Science

Michael Murdoch, BS, Cornell University; MS, Rochester Institute of Technology; Ph.D., Eindhoven University of Technology (The Netherlands)—Head, Integrated Sciences Academy; Director, Munsell Color Science Laboratory; Associate Professor, Program of Color Science

Extended Faculty of Program of Color Science

James Ferwerda, BA, MS, Ph.D., Cornell University—Associate Professor, Imaging Science

Joseph Geigel, BA, Manhattan College; MS, Stevens Institute of Technology; D.Sc., George Washington University—Associate Professor, Computer Science

Institute of Technology—Director, RIT Center for Media, Arts, Games, Interaction & Creativity (MAGIC) and MAGIC Spell Studios; Associate Professor, Motion Picture Science

Color Science

Sue Farnand, Ph.D., University of Kentucky—Professor, Motion Picture Science

Susan Houde-Walter, BA, Sarah Lawrence College; MS, Ph.D., University of Rochester—Professor and Director, Imaging Science: lasers and photonics; optical imaging systems; optical materials

Iris Asllani, B.Sc., University of Tirana (Albania); M.Sc., Ph.D., University of Washington, Seattle—Associate Research Professor, Neuroimaging, Functional MRI, NMR Physics

Charles Bachmann, A.B., Princeton University; Sc.M., Ph.D., Brown University—Professor, Imaging Science; Frederick and Anna B. Wiedman Chair: coastal characterization from remote sensing; advanced retrieval algorithms for hyperspectral and multi-sensor imagery; spectroscopy, BRDF, and advanced instrumentation for calibration and validation; pattern recognition; graph and manifold descriptions of high-dimensional data

Peter Bajorski, MS, University of Wroclaw (Poland); Ph.D., Technical University of Wroclaw (Poland)—Professor, regression models, multivariate analysis, nonparametrics, statistical approaches to spectral image processing
Nathan Cahill, BS, MS, Rochester Institute of Technology; D.Phil., University of Oxford (United Kingdom)—Graduate Program Director, Mathematical Modeling; Professor, Mathematics: scientific computing, biomedical image analysis, computer vision, advanced mathematical approaches to image processing

Dimah Dera, BS, Damascus University (Syria); MA, MS, Ph.D., Rowan University—Assistant Professor, Imaging Science; robust deep learning, continual learning, statistical signal and image processing and optimization

Gabriel J. Diaz, BFA, Skidmore College; MS, Ph.D., Rensselaer Polytechnic Institute—Associate Professor, Imaging Science: application of imaging technologies to manuscripts of cultural importance; optical holography; digital and optical signal/image processing

Susan Farnand, BS, Cornell University; MS, Ph.D., Rochester Institute of Technology—Graduate Program Director, Program of Color Science; Assistant Professor, Program of Color Science

Roger L. Easton Jr., BS, Haverford College; MS, University of Maryland; MS, Ph.D., University of Arizona—Professor, Imaging Science: application of imaging technologies to manuscripts of cultural importance; optical holography; digital and optical signal/image processing

Aaron Gerace, BS, MS, State University College at Brockport; Ph.D., Rochester Institute of Technology—Research Faculty, Imaging Science

Richard Hailstone, BS, Northern Illinois University; MS, Indiana University—Associate Professor, Imaging Science: characterization of materials using electron microscopy, synthesis of nanoparticles, imaging system modeling

Andrew Herbert, BS, McGill University (Canada); MA, Ph.D., University of Western Ontario (Canada)—Associate Dean, College of Liberal Arts; Professor, Department of Psychology: visual perception

Matthew J. Hoffman, BA, Williams College; MS, Ph.D., University of Maryland—Professor, data assimilation, applied mathematics, ocean and atmospheric forecasting, remote sensing; hyperspectral vehicle tracking

Joseph P. Hornak, BS, Utica College of Syracuse University; MS, Purdue University; Ph.D., University of Notre Dame—Professor, Joint Appointment with School of Chemistry and Materials Science: physical chemistry; magnetic resonance spectroscopy and imaging

Emmett Ientilucci, BS, MS, Ph.D., Rochester Institute of Technology—Associate Professor, Imaging Science: remote sensing, hyperspectral image processing, multivariate statistics, target detection, radiometry

Joel H. Kastner, BS, University of Maryland; MS, Ph.D., University of California, Los Angeles—Research Professor, Imaging Science: astronomical imaging, including x-ray, infrared and radio spectroscopy; young stars and planet formation; evolved stars and planetary nebulae

John P. Kerekas, BS, MS, Ph.D., Purdue University—Research Professor, Imaging Science: multispectral remote sensing systems, multidimensional imaging system, pattern recognition

Bartosz Krawczyk, B.Eng., MS.c., Ph.D., Wroclaw University of Science and Technology (Poland)—Assistant Professor, Imaging Science: machine learning; imbalanced data; continual and lifelong learning; data streams; concept drift; explainable artificial intelligence; adversarial learning; representation learning

Robert L. Kremens, BS, The Cooper Union; MS, University of Rochester; MS, Ph.D., New York University—Research Professor, Imaging Science: wildland fire behavior and effects, remote sensing instrumentation, autonomous remote instruments for environmental monitoring, electronics measurement systems

Cristian Linte, BSc, University of Windsor (Canada); MEng, Ph.D., University of Western Ontario (Canada)—Associate Professor, Biomedical Engineering: image-guided visualization and navigation for minimally invasive therapy

Dongfang Liu, Ph.D., Purdue University—Assistant Professor, Artificial Intelligence, Machine Learning, Deep Learning, Computer Vision, Human–Computer Interaction, and Medical Imaging

Nishant Malik, BS, MS, University of Delhi (India), Ph.D., University of Potsdam (Germany)—Assistant Professor, network science, nonlinear dynamics, stochastic processes

David W. Messinger, BS, Clarkson University; Ph.D., Rensselaer Polytechnic Institute—Professor

Zoran Ninkov, B.Sc., University of Western Australia (Australia); MS, Monash University (Australia); Ph.D., University of British Columbia (Canada)—Xerox Chair; Professor, Imaging Science: detector array development and characterization, development of novel astronomical instrumentation, studies of young stellar clusters, planetary detection

Shima Parsa Moghaddam, B.Sc., Iran University of Science and Technology (Iran); M.Sc., Tabriz University (Iran); Ph.D., Wesleyan University—Assistant Professor

Richard O’Shaughnessy, BA, Cornell University; Ph.D., California Institute of Technology—Associate Professor, gravitational wave astrophysics

Jeff Pelz, BFA, MS, Rochester Institute of Technology; Ph.D., University of Rochester—Frederick Wiedman Professor, Imaging Science: visual perception and cognition, understanding high-level visual processing by examining eye movements in the execution of complex tasks in natural environments

Flip Phillips, BFA, MA, Ph.D., The Ohio State University—Professor, Motion Picture Science, MAGIC Center

Jie Qiao, BS, University of Science and Technology Liaoning (China); MS, Tsinghua University (China); M.B.A., University of Rochester; Ph.D., University of Texas at Austin—Associate Professor, Imaging Science: optical metrology, optical instrumentation, adaptive optics and active optics, ultrafast laser systems and applications (remote sensing, material processing), optical system design and performance evaluation

Eli Saber, BS, State University of New York at Buffalo; MS, Ph.D., University of Rochester—Professor, Electrical and Microelectronic Engineering: signal, image and video processing; computer vision

Carl Salvaggio, BS, MS, Rochester Institute of Technology; Ph.D., Syracuse University and the State University of New York College of Environmental Science and Forestry—Professor: novel techniques for the measurement of spectral optical properties, quantitative reflective and emissive remote sensing, digital image processing, three-dimensional geometry extraction from imagery, and scene simulation and modeling

Andreas Savakis, BS, MS, Old Dominion University; Ph.D., North Carolina State University—Professor, Computer Engineering: digital image processing, computer vision
### Mathematical Modeling

- **Ephraim Agyingi**, BS, MS, University of Ilorin (Nigeria); Ph.D., University of Manchester (United Kingdom)—Associate Professor, numerical analysis
- **Mihail Barbosu**, BS, Ph.D., Babes-Bolyai University (Romania); MS, Ph.D., Paris VI University (France)—Associate Head and Graduate Program Director, Applied Statistics; Professor, mathematical modeling, dynamical systems, celestial mechanics and space dynamics, symbolic computation systems, data analytics, management science
- **Nathaniel Barlow**, BS, Ph.D., Clarkson University—Undergraduate Program Coordinator, Applied and Computational Mathematics; Associate Professor, stability and propagation of waves in fluids, asymptotic methods
- **Mauro P. Bautista**, BS, Ateneo de Manila University (Philippines); MS, Ph.D., Purdue University—Professor, numerical analysis, applied mathematics
- **Bernard Brooks**, BS, University of Toronto (Canada); MBA, Rochester Institute of Technology; MS, Ph.D., University of Guelph (Canada)—Associate Head, Applied and Computational Mathematics; Professor: mathematical modeling, dynamical systems, financial mathematics
- **Nathan Cahill**, BS, MS, Rochester Institute of Technology; D.Phil., University of Oxford (United Kingdom)—Graduate Program Director, Mathematical Modeling; Professor, Mathematics: scientific computing, biomedical image analysis, computer vision, advanced mathematical approaches to image processing
- **Manuela Campanelli**, Laureate in Mathematics, University of Perugia (Italy); Ph.D., University of Bern (Switzerland)—Director, Center for Computational Relativity and Gravitation; Professor, Mathematics: numerical relativity, gravitational physics, computational astrophysics, black holes, gravitational waves

### Luciferian Computing

- **Matthew Coppenbarger**, BS, University of Arizona; MA, Ph.D., University of Rochester—Associate Professor, mathematical physics, spectral theory
- **Michael Cromer**, BS, York College of Pennsylvania; MS, Ph.D., University of Delaware—Associate Professor, mathematical modeling of complex fluids, asymptotics and perturbation methods, simulation
- **Moumita Das**, BS, MS, Jadavpur University (India); Ph.D., Indian Institute of Science—Professor, Physics: theoretical soft condensed matter, mechanical response of biological materials and living systems
- **Joshua Faber**, BS, State University of New York at Stony Brook; Ph.D., Massachusetts Institute of Technology—Head, School of Mathematics and Statistics; Professor, Mathematics: numerical relativity, computational astrophysics, dynamics
- **Raluca Felea**, BS, University of Iasi (Romania); Ph.D., University of Rochester—Professor, microlocal analysis
- **Anthony A. Harkin**, BS, State University College at Brockport; MS, Massachusetts Institute of Technology; Ph.D., Boston University—Associate Professor, applied and computational mathematics, partial differential equations
- **Mathew J. Hoffman**, BA, Williams College; MS, Ph.D., University of Maryland—Professor, data assimilation, applied mathematics, ocean and atmospheric forecasting, remote sensing, hyperspectral vehicle tracking
- **Bonnie C. Jacob**, BA, Smith College; MS, Ph.D., Clemson University—Associate Professor
- **Jobby Jacob**, BS, Bharata Mata College (India); MS, Indian Institute of Technology (India); MS, Ph.D., Clemson University—Associate Professor, graph theory
- **Baasansuren Jadamba**, BS, National University of Mongolia (Mongolia); MS, University of Kaiserslautern (Germany); Ph.D., University of Erlangen-Nuremberg (Germany)—Associate Head, Applied and Computational Math; Professor, partial differential equations, inverse problems, numerical optimization
- **Akhtar Khan**, MS, Technical University Kaiserslautern (Germany); Ph.D., Michigan Technological University—Professor, applied math, optimization, inverse problems, variational inequalities, elasticity imaging
- **Cristian Linte**, BSc, University of Windsor (Canada); MSc, Ph.D., University of Western Ontario (Canada)—Associate Professor, Biomedical Engineering: image-guided visualization and navigation for minimally invasive therapy
- **Carlos Lousto**, MS, Universidad Nacional De La Plata (Argentina); Ph.D., Universidad De Buenos Aires (Argentina)—Professor, numerical relativity
- **Carl V. Lutzer**, BS, Michigan State University; MA, Ph.D., University of Kentucky—Director, Honors Program; Professor, mathematical physics
- **Kara L. Maki**, BS, University of New Hampshire; MS, Ph.D., University of Delaware—Graduate Program Director, Applied and Computational Mathematics; Associate Professor, mathematical modeling, scientific computing
- **Nishant Malik**, BS, MS, University of Delhi (India); Ph.D., University of Potsdam (Germany)—Assistant Professor, network science, nonlinear dynamics, stochastic processes
- **Panos P. Markopoulos**, BS, MS, Technical University of Crete (Greece); Ph.D., University at Buffalo—Assistant Professor, Communication and Signal Processing
- **Laura M. Munoz**, BS, California Institute of Technology; Ph.D., University of California at Berkeley—Associate Professor, mathematical biology, dynamical systems, applied control theory
Darren A. Narayan, BS, State University of New York at Binghamton; MS, Ph.D., Lehigh University—Professor, graph theory, discrete math

Jason Nordhaus, BA, BS, MS, Ph.D., University of Rochester—Associate Professor, Science and Mathematics, National Technical Institute for the Deaf: computational astrophysics, core-collapse supernovae, binary interactions, strongly magnetized compact objects, physics of common envelopes

Jennifer O’Neil, BS, Rochester Institute of Technology; Ph.D., Purdue University—Assistant Professor, Mechanical Engineering Technology: fluid dynamics, non-Newtonian liquids

Richard O’Shaughnessy, BA, Cornell University; Ph.D., California Institute of Technology—Associate Professor, gravitational wave astrophysics

Niels F. Otani, BA, University of Chicago; Ph.D., University of California at Berkeley—Associate Professor, mathematical biology

Poornima Padmanabhan, B.Tech., Indian Institute of Technology, Madras (India); Ph.D., Cornell University—Assistant Professor, Chemical Engineering; self-assembly, thermodynamics, materials design, soft matter

Mary Lynn Reed, BS, Georgia Institute of Technology; MFA, University of Maryland; Ph.D., University of Illinois—Professor, abstract algebra, network science, cybersecurity, statistical modeling

George Thurston, AB, Oberlin College; Ph.D., Massachusetts Institute of Technology—Graduate Program Director, Physics; Professor, Physics: biological and chemical physics, experimental and theoretical studies of phase transitions, physical and chemical basis of protein condensation diseases, nuclear magnetic resonance, light, x-ray, and neutron scattering

John T. Whelan, BA, Cornell University; Ph.D., University of California at Santa Barbara—Professor, computational relativity and gravitation, gravitational wave data analysis

Steven J. Weinstein, BS, University of Rochester; MS, Ph.D., University of Pennsylvania—Department Head; Professor, interfacial transport processes, hydrodynamic wave phenomena, applied mathematics

Tamas Wiandt, BS, Jozsef Attila University (Hungary); Ph.D., University of Minnesota—Professor, dynamical systems

Yosef Zlochower, BS, Ph.D., University of Pittsburgh—Professor, numerical relativity, relativistic astrophysics, black hole physics
Golisano Institute for Sustainability

Nabil Nasr, Associate Provost and Institute Director
rit.edu/gis

Golisano Institute for Sustainability is a comprehensive academic, training, and technology-transfer center focusing on multidisciplinary studies in sustainable production systems and the built environment. The institute’s research areas include sustainable products, sustainable mobility, alternative energy systems, Eco-IT, and pollution prevention.

Please visit the college’s website for in depth information on academics, faculty, facilities, research initiatives, advising, and more.

Admission requirements
Each college makes all decisions regarding graduate admission. Please refer to the individual program descriptions for information regarding specific admission criteria. For general graduate admission information, please refer to the Admission section of this bulletin.

Financial aid and scholarships
Please refer to the Financial Aid and Scholarship section of this bulletin for information regarding financial aid, scholarships, grants, loans, and graduate assistantships.

Alissa De Wit-Paul, Assistant Professor
585-475-7422, addgis@rit.edu

Program overview

Sustainability concerns are changing how we think about architecture. Buildings account for a large percentage of the world’s energy expenditures and carbon emissions, which has driven demand for more sustainable architecture. In RIT’s accredited master of architecture program, we’re moving sustainability forward to elevate the value of architectural design. As a student here, you’ll learn how to design with context and substance in areas such as positive energy, performance building, climate-responsive designs, passive resiliency, and more.

Our accredited architecture program offers an immersive program focused on investigating the complexity of designing buildings with people, space, and the environment in mind. Whether you have a background in the building design sector or are new to the field, the program will prepare you for a path to positively contribute to the design of tomorrow’s buildings, neighborhoods, and communities.

Our program offers foundation courses as well as more in-depth classes exploring integrated building systems, urban planning, industrial ecology, and more. You’ll also have the flexibility to choose electives in other subject areas based on your unique talents and career goals, such as business, engineering, energy, or additional design skills.

What Sets Us Apart

1. Design matters: As a program emphasizing design, the program’s core education takes place in the studio. Our studio curriculum integrates construction technologies, material science, and mechanics into design.
2. Hands-on education: Expect a hands-on learning environment, working on real-world projects and utilizing our 75,000-square-foot, LEED Platinum-certified building to observe and test building efficiency. The City of Rochester and the western New York region also serve as an active learning environment for our students.
3. Work experience: A professional co-op will help you build your resume before you graduate. RIT’s cooperative education program lets you work in the field with local architects and present neighborhood improvement ideas to planning boards.
4. Global experience: Our global experience requirement lets you experience new cultures, settings, and contexts to expand your understanding of diverse architectural interests and needs.
5. STEM-designated: Our program is STEM-designated, which increases scholarship and research opportunities for students, and offers up to two additional years of work/study for international students.
6. NAAB-accredited: We’re one of the few master of architecture degree programs in the U.S. to be accredited by the National Architectural Accrediting Board (NAAB)—that means you’re getting one of the best architecture educations in the country.
7. Thesis: Our thesis option allows you to integrate everything you learn into a comprehensive project. Past student theses include designs for an urban master plan for Rochester’s downtown, a net-zero or positive energy building, and a turbine system to harvest rainwater for energy.
8. On-campus or online: Our program is offered in both a traditional on-campus experience and through a 100% online setting.

Plan of Study

The RIT master of architecture program is available in a traditional on-campus setting or through a fully online format. The program also provides advanced standing or standard admission pathways for both the on-campus and online settings. We work with each student individually to determine the best setting and pathways and can customize course requirements based on levels of prior experience.

Program Settings

9. On-campus: Designed as a full-time in-person program, courses are offered on campus in the fall and spring semesters, primarily during the day, and often include open periods between classes to allow time for students to gain work experience with an architectural firm while they complete their degree.
10. Online: Designed as a flexible and remote program, courses are offered through 100% online instruction during the fall, spring, and summer semesters using both synchronous and asynchronous instruction. This flexible format allows time for students to gain work experience with an architectural firm while they complete their degree from any location.

Program Pathways

11. Advanced Standing Pathway: For those with previous experience and an undergraduate degree in architecture, the Advanced Standing track provides a two- to two-and-a-half year (5 semester) path.
12. Standard Admission Pathway: For those with no prior experience or background in architecture, the Standard Admission track is available and provides a three and half year (7-semester) path.

Curriculum

- Sustainability: With a global need for a more sustainable world, including buildings and their impact on energy consumption and carbon footprints, the focus of many courses reflect the conditions of sustainable design and practice.
- Technology: Design exploration is enhanced through the understanding of the implication of technology on both design process and product. The program enables students to focus and collaborate in many specialized areas of technology, including engineering, computer science, imaging science, materials and construction, and products and remanufacturing.
- Urbanism: The complexity of the urban environment requires an interdisciplinary approach to architecture education—one that references economics, public policy, sociology, and regional culture. With this in mind, the program also focuses on the practices and principles of preservation and adaptive reuse.
- Integrated learning/practice: From the outset, students often approach design problems within teams, learning to value and leverage collective and collaborative participation. Through integrated learning and evidenced-based models, we prepare students for the increasingly integrated practice of architecture, where architects are orchestrating teams of professionals from a variety of fields, including engineering, management, science, and computer science.

Enhanced Career Opportunities

RIT’s master of architecture program is proud of the 100 percent job placement rate among our graduates. Our alumni are employed in architectural firms around the world and are working in diverse fields, from community development to smart growth to green building materials. Within firms and elsewhere, they serve as architectural designers, research scientists, sustainability consultants, planning engineers, start-up
enthusiasts, and more. Plus, our professional co-ops are a compelling program requirement that often leads to employment offers from architects and other firms working in construction, urban design, and facilities management.

**Innovation Through Diversity**

Enhancing the value of design requires constructive collaboration and a breadth of skills and viewpoints, interwoven in a way that elevates and celebrates everyone's differences and strengths at RIT. Behind our focus on creativity and innovation is a dedication to diversity and inclusion that is fundamental to our mission. The master of architecture degree is suited for students with or without a background in the architecture or sustainability fields. Many of our students have been former art teachers, film students, engineers, interior designers, lawyers, and more before beginning their studies. They bring these backgrounds to the program in ways that enriched conversations and perspectives about design and human needs. Plus, approximately one-third of our students are international students, bringing cultural experiences and architectural design concepts from every continent.

Numerous courses in the architecture curriculum require students to purchase supplies for use in class. Please review the Supply List for required supplies prior to starting the Master of Architecture program. For additional information, visit our Accreditation and Support page.

**Accreditation**

The master of architecture program is accredited by the National Architectural Accrediting Board (NAAB). In addition, the program is now designated as a STEM program in Architectural and Building Sciences/Technology (CIP code 04.0902) making international graduates eligible to extend their F-1 visas for up to three years in order to work in the United States.

Learn more about our program advisory council.
See who has made our program possible.

**Admission requirements**

This program is available on-campus or online.

Offered Full-time
- Full-time Admit Term(s): Fall, Spring considered with advanced standing
- Full-time Application Deadline: Fall: February 15 priority deadline, rolling thereafter; Spring: rolling
- Full-time STEM Designated: Yes

Offered Part-time
- Part-time Admit Term(s): Fall or Spring
- Part-time Application Deadline: Rolling
- Part-time STEM Designated: No

Full-time study is 9+ semester credit hours. Part-time study is 1-8 semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

**Application Details**

To be considered for admission to the Architecture program, candidates must fulfill the following requirements:
- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a personal statement of educational objectives.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Submit a portfolio. Requirements are listed on the Graduate Admissions website.
- Writing samples are optional.
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

**English Language Test Scores**

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL 88
- IELTS 6.5
- PTE Academic 60

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

**Cost and Financial Aid**

An RIT graduate degree is an investment with lifelong returns. Graduate tuition varies by degree, the number of credits taken per semester, and delivery method. A combination of sources can help fund your graduate degree. Visit the RIT Financial Aid website to view funding sources and to learn how to fund your degree.

222 Graduate Bulletin
Additional Information

Advanced Standing Track for Spring Admit Term
The Advanced Standing track provides a two- to two-and-a-half-year (5 semesters) path to degree completion. The Spring admit term is only available for applicants pursuing the Advanced Standing Track. To qualify for advanced standing, applicants must have previous experience and an undergraduate degree in architecture.

Sustainability, Ph.D.

www.rit.edu/study/sustainability-phd
Amit Batabyal, Professor
585-475-2805, aabgsh@rit.edu

Program overview
Our approach to sustainability means working in the broader context of environmental assessment, economics, and policy. Each faculty member in the Golisano Institute for Sustainability sponsors a select number of students for specific research projects, with the scope varying from fundamental science to applied engineering to corporate sustainability applications. On acceptance into a sponsored research project, you will receive a fully-funded education, a stipend to help with living expenses, your own office space, and the time to develop your technical expertise in sub-areas dependent on your research.

In the sustainability Ph.D. program, you’ll have the opportunity to learn from areas across the entire university to develop your own innovative approach to the field, building off of methodologies such as life cycle assessment, environmental risk and impact assessment, design for the environment, pollution prevention, closed-loop supply chain management, and product life assessment. Moreover, you’ll work side-by-side with our world-renowned faculty who are avid researchers in diverse areas including biofuels, transportation, energy policy, resource recovery, smart products and systems, and more.

The sustainability Ph.D. helps you think innovatively about how sustainability can positively impact systems all over the world through big-picture solutions, from training future business leaders to maximizing natural resources. You don't need a background in sustainability to apply to this program; you just need a desire to create positive change in the world. We bring in students of all ages, from all backgrounds—from biotechnology to business—and from all over the world. You’ll also find a wide range of experience—many of the program's students have more than 10 years of career experience and/or education.

The faculty are well-known scholars and active researchers who not only bring their knowledge into the classroom but also directly involve students in their scholarship. This work includes a wealth of hands-on experience in our impressive research facilities, including a 75,000-sq.-ft., LEED Platinum certified research building with over nine labs and six technology testbeds. With this level of experience, you’ll be prepared for diverse academic and industry jobs where you can make an impact on the way the world views and utilizes sustainable practices, from the macro to the micro.

RIT's Sustainability Ph.D.

With the sustainability Ph.D.'s integrative curriculum, you will develop a deep foundation in sustainability science, sustainable systems, risk analysis, and more. You can also choose several electives from across RIT’s colleges—from Computational Modeling and Simulation to Principles of Statistical Data Mining—to tailor your degree and create interdisciplinary relationships throughout the university.

Through your sponsored research project, you’ll have the opportunity to make novel and impactful contributions to the development and understanding of sustainable technologies. Recent dissertation examples include:

- Implications of Consumer Lifestyle Changes and Behavioral Heterogeneity on U.S. Energy Consumption and Policy
Golisano Institute for Sustainability

- Development of an Integrated Reformer and Fuel Cell System for Portable Power Applications

**Sustainability Research**

**Sustainable Energy**
- Fuel cells
- Photovoltaics
- Energy supply/demand models
- Energy policy

**Circular Economy**
- Life cycle assessment
- Electronic waste and battery recycling
- Waste-to-energy processes
- Food waste management
- Remanufacturing

**Sustainable Urban Systems**
- Smart Cities
- Transportation systems analysis
- Food Waste Management
- Food-Energy-Water Nexus

**Sustainability Resources: RIT Advances Global Sustainability**

Partnering locally and internationally with the communities in which we are engaged, RIT is continuing to advance sustainability efforts and build resiliency at home and around the world. Rochester, NY, is a hub for sustainability professionals and home to rich natural resources, such as fertile farmland and the nearby Finger Lakes. Many of our students share their passion for sustainability with the local community by volunteering on projects connected to K-12 education, community gardens, farmer’s markets, and more. In addition, you will connect with the global sustainability community by attending and presenting at professional conferences all over the world.

**Admission requirements**

This program is available on-campus only.

**Offered Full-time**
- Full-time Admit Term(s): Fall
- Full-time Application Deadline: January 15 priority deadline. Closed for new applications for Fall 2023.
- Full-time STEM Designated: Yes
- Full-time study is 9+ semester credit hours. International students requiring a visa to study at the RIT Rochester campus must study full-time.

**Application Details**

To be considered for admission to the Sustainability program, candidates must fulfill the following requirements:
- Complete an online graduate application.
- Submit copies of official transcript(s) (in English) of all previously completed undergraduate and graduate course work, including any transfer credit earned.
- Hold a baccalaureate degree (or US equivalent) from an accredited university or college.
- A recommended minimum cumulative GPA of 3.0 (or equivalent).
- Submit a current resume or curriculum vitae.
- Submit a statement of purpose for research which will allow the Admissions Committee to learn the most about you as a prospective researcher.
- Submit two letters of recommendation.
- Entrance exam requirements: None
- Submit English language test scores (TOEFL, IELTS, PTE Academic), if required. Details are below.

**English Language Test Scores**

International applicants whose native language is not English must submit one of the following official English language test scores. Some international applicants may be considered for an English test requirement waiver.

- TOEFL: 100
- IELTS: 7.0
- PTE Academic: 70

International students below the minimum requirement may be considered for conditional admission. Each program requires balanced sub-scores when determining an applicant’s need for additional English language courses.

**Cost and Financial Aid**

An RIT graduate degree is an investment with lifelong returns. Ph.D. students typically receive full tuition and an RIT Graduate Assistantship that will consist of a research assistantship (stipend) or a teaching assistantship (salary).

**Additional Information**

**Prerequisites**

Applicants must have completed at least two science courses, one calculus course, and one statistics course.
Sustainable Systems, MS

www.rit.edu/study/sustainable-systems-ms

Nathan Williams, Assistant Professor
585-475-5802, njwgis@rit.edu

Program overview

The sustainable systems MS degree accepts students from any academic background and encompasses a wide range of interdisciplinary studies in sustainability science. Here, you won’t be restricted to one sustainability topic or methodology. You will comprehensively learn and experience the methods that lead to environmental, social, technological, and business success, working one-on-one with a faculty advisor to tailor the degree to your sustainability interests.

RIT’s Sustainable Degree

In our sustainable master’s program, you will start with a broad foundation of knowledge in environmental life cycle assessment, sustainable decision making, economic and policy strategies, and more. Then, you will have the opportunity to customize your degree in areas that suit your interests and career goals—such as renewable energy or mobility—as well as gain the hands-on experience that employers are seeking. In as little as one year of study, you will be prepared to make sustainability decisions that you can apply to any career.

Not only will you be able to focus on an area that interests you, but you will be able to get hands-on in your projects with the use of one of our many labs or through design modeling tools. This degree allows you the flexibility to adapt your career over time and in response to the ever-changing developments in sustainability. The Golisano Institute for Sustainability is dedicated to groundbreaking sustainability research and its business applications. Our research facilities are second to none, and include a number of green buildings including Sustainability Institute Hall, a 75,000-square-foot, LEED Platinum-certified research building and multiple state-of-the-art research centers.

You don’t need a background in sustainability to apply to this program; just a desire to create positive change in the world. We accept applicants of all ages, from all backgrounds—from mechanical engineering to political science—and from all over the world. This ensures your learning experience comes from the classroom as well as from the perspectives of students with diverse experiences.

Sustainability Curriculum

Through a flexible and interdisciplinary curriculum, you’ll begin your degree in sustainable systems with core courses in industrial ecology, risk assessment, the economics of sustainability, and more. Several electives from across the university—in areas as diverse as from sustainable craft brewing and distilling to corporate social responsibility—allow you to tailor your degree around your talents and career goals.

Your degree culminates with a research thesis or a capstone project. Recent thesis examples include:
- Techno-Environmental Analysis of Generating Animal Feed from Wasted Food Products
- Fabrication and life cycle assessment of organic photovoltaics
- Characterizing adaptive capacity to climate change in developing countries: a case study on Peru
- Brewing and distilling to corporate social responsibility—allow you to

Sustainability Topics / Tracks

Sustainable Energy
- Sustainable Energy Systems
- Food-Energy-Water Nexus
- Energy Policy

Example research project: Inspection of wind turbine blades with unmanned aerial vehicles (UAVs)

Circular Economy
- Introduction to Geographic Information Systems (GIS)
- Data Analysis for Sustainability
- Innovation Policy
- Corporate Social Responsibility (CSR)

Example research project: Assessing a baseline case for reaching carbon neutrality in Monroe County by 2027

Sustainable Urban Systems
- Sustainable Mobility Systems
- Graduate Sustainable Communities
- Sustainable Building Metrics

Example research project: Evaluating strategies for sustainable renovation of RIT campus buildings

Careers in Sustainability

Graduates of the sustainable systems MS have a 100 percent placement rate, in part because of RIT’s dedication to career counseling and ongoing relationships with employers. This means that all of our graduates gain employment or choose to further their education shortly after graduating. And if you’re interested in pursuing a career more focused on academia or research, the master’s degree is also an excellent stepping stone to a doctoral program, such as RIT’s Ph.D. in sustainability, if you take the route of completing a thesis while here.

Sustainability Resources: RIT Advances Global Sustainability

Partnering locally and internationally with the communities in which we are engaged, RIT is continuing to advance sustainability efforts and build resiliency at home and around the world. Rochester, NY, is a hub for sustainability professionals and home to rich natural resources, such as fertile farmland and the nearby Finger Lakes. Many of our students share their passion for sustainability with the local community by volunteering on projects connected to K-12 education, community gardens, farmer’s markets, and more. In addition, you will connect with the global sustainability community by attending and presenting at professional conferences all over the world.

Faculty

Nabil Nasr, BS, Helwan University (Egypt); M.Eng., Pennsylvania State University; MS, Ph.D., Rutgers University—Associate Provost and Director, Golisano Institute for Sustainability

Dennis A. Andrejko, B.Arch., Arizona State University; M.Arch., Massachusetts Institute of Technology—Head, Department of Architecture, Associate Professor

Callie W. Babbitt, BS, Georgia Institute of Technology; ME, Ph.D., University of Florida—Professor

Amitrajeet A. Batabyal, BS, Cornell University; MS, University of Minnesota; Ph.D., University of California at Berkeley—Interim Head, Department of Sustainability, Distinguished Professor, Arthur J. Gosnell Professor of Economics

Julius J. Chiavaroli, B.Arch., University of Notre Dame; MBA, Rochester Institute of Technology—Professor

Alissa D. DeWit-Paul, BS, Cornell University; M.Arch., State University of New York at Buffalo; Ph.D., Binghamton University—Assistant Professor

Seth H. Holmes, B.Arch., Roger Williams University; MDes, Harvard University—Associate Professor

Eric Williams, BA, Macalester College; Ph.D., State University of New York at Stony Brook—Professor

Nathaniel J. Williams, BS, Whitworth University; MSc, Nelson Mandela University (South Africa); Ph.D., Carnegie Mellon University—Assistant Professor
Admission decisions for graduate applicants are made by the department or college offering the program, and upon receipt of a completed application file from the Office of Graduate Enrollment Services. Correspondence between the student and the university is conducted through the Office of Graduate Enrollment Services, according to the following policies and procedures:

1. Inquiries regarding academic programs, as well as all applications for graduate study, are directed to the Office of Graduate Enrollment Services, Rochester Institute of Technology, Bausch & Lomb Center, 58 Lomb Memorial Drive, Rochester, NY 14623-5604. 585-475-2229, gradinfo@rit.edu.
2. The Office of Graduate Enrollment Services will acknowledge the inquiry or application, instructing the student as to the information required for admission by the school or department to which he or she is applying.
3. Once a student has submitted a formal application, the Office of Graduate Enrollment Services will prepare an applicant file. All correspondence and admission information is collected by the Office of Graduate Enrollment Services and placed in the applicant’s file. The file will include an RIT application, previous college records (transcripts), applicable test scores, letters of recommendation, and other documents that may support admission of the candidate.
4. When all relevant admission data has been received, the applicant’s file is sent to the appropriate school or department for review and an admission decision.
5. When the school or department has made a decision on the application, the decision form is returned to the Office of Graduate Enrollment Services.
6. The Office of Graduate Enrollment Services notifies candidates of admission decisions.
7. Academic units may informally advise non-degree students, but no formal program of study can be approved prior to admission.
8. The formal program is laid out by the dean's designee (department head, coordinator or program director, etc.) and is the one that must be followed by all students applying for admission or readmission in that program.
9. The basic entry requirements for graduate degree candidates include the completion of a baccalaureate degree and whatever other evidence of the applicant's potential to complete graduate studies may be required by the particular program. Rare exceptions to the baccalaureate requirement can be made in the case of candidates who have demonstrated unusual competence in their field of specialization. For these exceptions the recommendation of the department chairperson or director and the approval of the appropriate dean and the dean of graduate education are required.

The U.S. Government expects international students to prove competency in the English language prior to their acceptance to an American college or university. In keeping with this expectation, students whose native language is not English and whose secondary or higher education was completed in a non-native English speaking country must take a test of English language proficiency. Students must achieve the following minimum scores prior to consideration for admission into graduate studies: 79 (Internet-based) on the Test of English as a Foreign Language (TOEFL), 6.5 on the International English Language Testing System (IELTS), or 56 on the Pearson Test of English – Academic. Individual academic units may require higher standards or additional requirements, including balanced sub-scores, when determining an applicant’s possible need for additional English language courses.

Applicants whose test results fall below the minimum scores for admission but who otherwise meet academic requirements will be referred to the English Language Center. They will not be admitted to academic programs until they meet proficiency criteria established by the English Language Center.

In certain cases graduate students may be admitted prior to, but conditional upon completion of the baccalaureate degree. Applicants should not be considered for admission prior to the start of their final year of undergraduate study. The student must present a final transcript signifying successful completion of their baccalaureate degree by the end of the first term they are enrolled in the graduate program.

Graduate applicants who do not fully satisfy all admission criteria as to grades, test scores or other credentials, but do show sufficient promise to qualify for a trial period of graduate study may be admitted on probation to the university. Such students must achieve a 3.00 (B) program grade point average by the end of their first 9 credit hours of graduate study. Those students who do not meet this criterion will be suspended. Responsibility for specific requirements and maintenance of the student’s appropriate status rests with the academic unit in consultation with the Office of Graduate Enrollment Services and the Office of the Registrar.

### New York State immunization requirement

All students registered for four or more credits and born after January 1, 1957, must comply with New York state and RIT immunization requirements. New York State Law requires proof of immunity to measles, mumps, and rubella through either two MMR immunizations or positive blood titers for each disease. New York state also requires all students, regardless of age, to sign a meningococcal awareness form. RIT requires students age 26 and under to have the meningitis shot. Required immunizations should be obtained before arrival to avoid delay in registration or interruption of classes for which students have enrolled. Contact the Student Health Center (www.rit.edu/studentaffairs/studenthealth) with questions. Additional information and forms are available online.

### Readmission

Students who leave a graduate program, or have a lapse in enrollment greater than or equal to three terms, including summer, and wish to return to that program must reapply through the Office of Graduate Enrollment Services. All student applications are subject to admissions standards at the time of reapplication. The program of study shall be subject to review and may be rewritten. Previous waiver and/or transfer credit may be lost, and program deficiencies may need to be made up.

Each college has the responsibility, upon a student’s readmission, of determining which previous courses if any, are applicable toward the degree. Be aware that standards and degree requirements may have changed and previous waiver, transfer, or competency credit may be lost and program deficiencies may need to be made up. All readmission decisions are made by the academic unit. Readmission is not guaranteed.

Graduate students must complete the graduate program within seven years of the date of matriculation into their program. This does not apply to prerequisites, bridge program courses or similar requirements.
**Costs and Payment Procedures**

**The university reserves the right to change its tuition and fees without prior notice. Nonmatriculated students are charged graduate rates for graduate courses.**

Graduate costs are listed in the table on this page. In addition, any graduate student carrying more than 18 credit hours of study will be charged the full-time tuition rate plus $1,778/credit hour for each hour of study exceeding 18.

Housing and food for full-time students: A variety of housing options (residence halls and apartments) and meal plans are available to graduate students. Costs vary according to options selected. For information about housing and meal plan options, please visit Housing Operations at: www.rit.edu/fa/housing/.

The cost of books and supplies varies depending on the area of study and the number of courses taken by a student. The estimated cost for books and supplies ranges from $500 to $2,500 a year for full-time students and $300 to $700 a year for part-time students.

Charges for tuition, fees, and housing and food are computed on a semester basis. University billing statements may be paid by cash, check, or electronic check (e-check). The university does not accept credit card payments for tuition, fees, and housing and food that appear on the student billing statement. However, we have an arrangement for a third-party vendor to accept MasterCard, Visa, and Discover Card when payment is made online. The vendor does charge a percentage fee for each credit card transaction. Billing-related payments (check) may be mailed to: Rochester Institute of Technology, Student Financial Services, 25 Lomb Memorial Drive, Rochester, NY 14623. Payment also may be made in person at the Office of Student Financial Services on the first floor of the University Services Center. Credit card and e-check payment information can be found at www.rit.edu/sfs/billing-and-payment-options.

Due dates are clearly designated on the billing statement and our website. Failure to pay the amount due or arrange an optional payment by the due date will result in a late payment fee. Payments due are:

- **Fall semester:** August 15, 2023
- **Spring semester:** January 15, 2024

Payment plan option information can be found at: www.rit.edu/sfs/billing-and-payment-options

**Electronic Billing**

All billing notifications are sent to the student’s RIT email address. Students have the option of setting up to three additional authorized users (parent, guardian, sponsor etc.) on their account to receive billing notifications and access to the account.

**Student Accident and Sickness Insurance**

All registered students are required to maintain medical insurance while attending RIT. Insurance coverage can be through RIT; a family member’s policy, or a personal policy.

A student accident and sickness insurance plan is available through RIT. There is a separate charge for this insurance. The plan provides coverage, within limits specified in the policy, for sickness and injury, outpatient services, emergency care, and prescriptions.

Enrollment in this plan is voluntary for all students except registered international undergraduate students (full- and part-time) on A, B, E, F, G, I, J, K, O, Q, R, and V visas. These students will be enrolled automatically in the basic accident and sickness policy on a semiannual basis.

There is no need to waive coverage if it is not desired. Students who want to enroll in this plan may enroll online or by mail. An open enrollment period is available at the beginning of each academic semester. Payment can be made by check, money order, or credit card, or the premium can be added to the student’s account.

The open enrollment period ends 30 days after the start of the academic semester in which the student first registers.

For plan and enrollment information, visit the web at www.universityhealthplans.com or call 800-437-6448. Students are not required to obtain the student accident and sickness insurance plan to receive services at the Student Health Center.

**Refund Policies**

For information regarding refund policies for withdrawal during the semester, please contact the Student Financial Services Office or visit their website: www.rit.edu/sfs/tuition-refundadjustment.

Any student who intentionally defrauds or attempts to defraud the university of tuition, fees, or other charges, or who gives false information in order to obtain financial aid, is subject to legal liability, prosecution, and university disciplinary action.
Financial Aid

www.rit.edu/admissions/aid

General Information

RIT offers a full range of financial aid programs to assist graduate students with their educational expenses. The information provided in this section is an overview of the sources of assistance available. Please consult the Office of Financial Aid and Scholarships’ website for more detailed information.

Scholarships and assistantships are available in most graduate departments. In addition, some departments offer externally funded tuition remission and stipends from corporate or government sponsors. Please contact the appropriate graduate program director (rit.edu/graduate-program-contacts) or the Office of Graduate Admission for additional information.

All federal student aid programs require submission of the Free Application for Federal Student Aid (FAFSA). The FAFSA may be completed online at studentaid.gov. Only US citizens or eligible non-citizens may file the FAFSA. Course work not applicable to the student’s program of study cannot be counted toward enrollment status nor in the determination of federal financial aid eligibility.

International students (F-1 or J-1 visa holders) may generally work on campus for up to 20 hours per week. Special authorization from International Student Services and/or the USCIS is needed for all other employment, including co-ops and internships. Please consult International Student Services at (585) 475-6943 or rit.edu/studentaffairs/iss for employment or visa questions.

Federal Satisfactory Academic Progress Requirements

To be eligible for federal financial aid, students who are U.S. citizens or eligible non-citizens are required by the U.S. Department of Education (34 CFR 668.34) to maintain Satisfactory Academic Progress (SAP) toward their degree objectives. RIT has established this SAP policy to ensure student success and accountability and to promote timely advancement toward degree objectives.

All students receiving federal assistance (i.e. Direct Loans, Direct Graduate PLUS Loans, Federal Work-Study) must remain enrolled in a degree program. Regulations require a maximum time frame for degree completion, a quantitative measurement where a student must complete 67% of credit hours attempted, and a qualitative measurement where a student must have at least a 3.0 cumulative grade point average.

Credit hours attempted include withdrawals, repeated courses, grade exclusions, non-matriculated courses, and credit by exam. Transfer credit count toward both attempted and completed credit hours.

Students must also complete their program within 150 percent of the published program length of the degree. For example, a thirty (30) credit hour master’s degree program would allow a student a maximum of forty-five (45) attempted credit hours to degree completion.

Review of academic records occurs at the end of each semester, including summer. Any student who has attempted or earned nine (9) or more credit hours but does not have a cumulative GPA of a 3.0 or higher will be considered not to be making SAP for federal financial aid programs (Direct Loans, Direct Graduate PLUS Loans). In addition, a student must have completed at least 67% of their total attempted credit hours. A student who does not meet this pace requirement will also not be making SAP. A student who does not appear to be able to meet degree completion within 150% of the program of study is not making SAP.

Students not making SAP due to a cumulative GPA or pace issue may appeal their status by submitting a Request for Federal Financial Aid Probation form, available in the Financial Aid and Scholarships section of their eServices account. In addition to this form, the student must provide a Federal SAP Action Plan developed by the student’s primary academic unit that demonstrates what the student must accomplish in order to regain federal SAP. The Office of Financial Aid and Scholarships will notify students of the results of the request for probation. If approved, a student may continue to receive federal financial aid, as long as the individual meets the goals outlined within the SAP Action Plan. The probation period may not exceed two semesters in length. A student is only eligible for one Federal Financial Aid Probation for their entire graduate career at RIT. As such, the student should only request Federal Financial Aid Probation if seeking federal financial aid.

Students not making SAP due to a 150% issue would be notified by the Office of Financial Aid and Scholarships if an appeal is possible. 150% appeals would require the completion of an Academic Plan to Graduation by the primary academic unit for each student.

Financial Aid Refund Policy

Return of federal funds

In accordance with federal regulations, the Office of Financial Aid and Scholarships recalculates federal aid eligibility for students who withdraw, drop out, are suspended, or take a leave of absence prior to completing more than 60 percent of a term. “Withdrawal date” is defined as the actual date the student initiated the withdrawal process, the student’s last date of academic related activity or the midpoint of the term for a student who leaves without notifying the university. Recalculation is based on the percent of earned aid using the following formula: number of days completed up to the withdrawal date/total days in the term. Aid returned to federal programs is then equal to 100 percent minus the percentage earned multiplied by the amount of federal aid disbursed.

Funds are returned to the federal government in the following sequence: Federal Direct Unsubsidized Loans, Federal Direct PLUS Loans, and other federal aid.

State scholarships

Regulations vary. Any adjustments are done in accordance with the specific requirements of the sponsoring state.
Privately funded grants and scholarships
In the absence of specific instructions from the sponsor, 100 percent of the semester offer will be credited to the student’s account.

RIT grants and scholarships
Institutional funding such as RIT grants and scholarships are prorated based on the tuition refund schedule for withdrawal during a semester. For more information, please contact the Office of Financial Aid and Scholarships or visit their website at rit.edu/admissions/aid.

This chart covers the most commonly awarded financial aid programs available to full-time graduate students at RIT. Information is correct as of July 2023. Most graduate programs require satisfactory progress toward degree completion to maintain eligibility. Filing the FAFSA by April 1 will ensure priority consideration for all programs. Applications filed after this date will receive consideration as long as funds remain available. Scholarships provided by RIT will be prorated for NTID-sponsored students to reflect lower NTID tuition rates.
University Policies and Procedures
www.rit.edu/academicaffairs

Academic Policies and Procedures

The complete library of student academic policies and procedures may be found online at: www.rit.edu/academicaffairs/policiesmanual/policies/student.

A graduate degree at RIT may be obtained in more than 70 programs ranging from business administration to imaging science. (Please refer to page 4 for a complete listing of graduate programs of study.)

Upon completion of the stipulated requirements, students are certified by their academic departments for their degrees. A statement verifying that a degree has been awarded will be posted to the transcript and diplomas are mailed to all graduates.

Enrollment
1. Student should complete the enrollment and payment process in accordance with university enrollment/billing procedures, as indicated in the current enrollment guide.
2. It is the responsibility of the student to update their address online through the Student Information System (SIS), or to advise the registrar of any change of address.
3. University ID cards are required for students to use many campus facilities and services (e.g., the library, Student Life Center, meal plans, check cashing). Identification cards are available at the Registrar’s Office.
4. Students are expected to pursue their degree without a substantial break. Failure to enroll (register) for three successive academic terms, including summer but excluding Intersession, can result in the loss of active student status.
5. RIT considers graduate-level students to be “full time” in every academic term in which they are enrolled for at least 9 semester credit hours. With approval of the department chair and associate provost for academic programs, additional equivalent credit can be granted for such activities as thesis work, teaching assistantships, and internships.

Student Classification
Active graduate students are those who have applied to and been formally accepted into a graduate program through the Office of Graduate Enrollment Services. Such students may enroll for graduate-level courses (600 and above) that fit their home department-approved programs. When enrolling for graduate courses outside the home department, students may need to secure the approval of the department offering the course.

Non-degree-seeking students will be allowed to take graduate courses on a space-available basis with the department’s approval, and with the knowledge that course work completed while a non-degree-seeking student will not necessarily apply to any given academic program.

Active and non-degree-seeking graduate students may enroll for undergraduate-level courses with the understanding that these courses will not apply to any RIT graduate program.

Degree Requirements

Credit Requirements
The minimum credit requirement for a master's degree is 30 semester credit hours. At least 80 percent of these credit hours must be earned at the graduate level and in residence at the university.

Transfer Credit
A maximum of 20 percent of the total required semester hours for the graduate degree may be awarded through any combination of transfer credit, waived credit, and credit by competency. Only a course with a grade of B (3.0) or better may be transferred.

Transfer credits are not calculated in the student's grade point average but will count toward overall credit requirements for the degree. Transfer credits do not count toward the satisfaction of residency requirements.

A graduate student who wishes to take courses at another institution and transfer them toward degree work at RIT must obtain prior permission from the appropriate departmental officer or dean.

Candidacy for an Advanced Degree
A graduate student must be a candidate for an advanced degree for at least one term prior to receipt of the degree. The position of the Graduate Council is that a student is a candidate for the master or doctoral degree when they are formally admitted to RIT as a graduate student.

Dissertation, Thesis, or Project Requirements
Included as part of the total credit-hour requirement may be a research, dissertation, thesis, or project requirement, as specified by each department. The amount of credit the student is to receive must be determined by the time of enrollment for that term. For the purpose of verifying credit, an end-of-term grade of R should be submitted for each enrollment of research and thesis/dissertation guidance by the student's faculty adviser. Before the degree can be awarded, the acceptance of the thesis/dissertation must be recorded on the student's permanent record. Students also should note the following continuation of thesis/dissertation policy. Students who submit a project receive a letter grade upon completion.

Students who complete a thesis or dissertation are required to submit an electronic copy of the thesis or dissertation to ProQuest/UMI for publication.

Continuation of Thesis/Project/Dissertation
Once work has begun on a thesis, project or dissertation, it is seen as a continuous process until all requirements are completed. If a thesis, project, or dissertation is required, or such an option is elected, and if the student has completed all other requirements for the degree, the student must enroll for the Continuation of Thesis/Project/Dissertation course each term (including summer but excluding Intersession). This course costs the equivalent of one-semester credit hour, although it earns no credit.

1. Enrollment for the Continuation of Thesis/Project/Dissertation course preserves student access to RIT.
services; e.g., Wallace Library, academic computing, and faculty and administrative support. With payment of appropriate user fees, access to the Student Life Center and Student Health Center also is preserved.

2. If circumstances beyond students’ control preclude them from making satisfactory progress on their thesis/project/dissertation, they should consider taking a leave of absence and discuss such a leave in advance with their adviser/department head. The dean’s signature of approval is required on the Leave of Absence or course, or take an approved leave of absence, their departments may elect to remove them from the program.

3. The length of time to complete a thesis/project/dissertation is at the discretion of the department. Be sure to read, however, the first point under “Summary of requirements for master’s degree” on this page.

Note: The dissertation is required only of Ph.D. students.

Summary Experience
The Graduate Council regards some form of integrative experience as necessary for graduate students. Such requirements as the comprehensive examination, a project, the oral examination of the thesis, and a summary conference are appropriate examples, provided they are designed to help the student integrate the separate parts of their total educational experience. The nature of the experience will be determined by the individual college or department.

Overlapping Credit for Second Degree
At the discretion of the Graduate Committee in the specific degree area, a maximum of 20 percent of previous RIT master’s degree earned hours can normally be applied toward satisfying requirements for a second master’s degree. The use of a given course in two different programs can be allowed only if the course that was used for credit toward the first degree is a required course for the second degree. The course must be used in both programs within five years; i.e., no more than five years between the time used for the first degree and when applied again toward the second degree.

In no case shall fewer than the minimum 30 semester credit hours be required for the second degree. If duplication of courses causes a student to go below the 30-hour limit in the second degree program, he or she would be exempted from these courses but required to replace the credit hours with departmentally approved courses. An RIT student will not be admitted through the Graduate Enrollment Services Office to the second degree program until the first program has been completed.

Financial Standing
Tuition and fees paid to the university cover approximately 60 to 70 percent of the actual expense of a student’s education. The rest of the cost is borne by the university through income on its endowment, gifts from alumni and friends, and grants from business and industry. Students, former students, and graduates are in good financial standing when their account is paid in full in the Student Financial Services Office. Any student whose account is not paid in full will not receive transcripts or degrees. The university reserves the right to change its tuition and fees without prior notice.

Summary of Requirements for Master’s Degree
1. Successfully complete all required courses of the university and the college. These requirements should be met within seven years of the date of matriculation into the student’s program. Extension of this rule may be granted through petition to the dean of graduate education.
2. Complete a minimum of 30 semester credit hours for the master’s degree. At least 80 percent of graduate-level course work and research (courses numbered 600 and above) must be earned in residence at RIT.
3. Achieve a program cumulative grade point average of 3.0 (B) or better.
4. Complete a thesis/project or other appropriate research or comparable professional achievement, at the discretion of the degree-granting program.
5. Pay in full, or satisfactorily adjust, all financial obligations to the university.

Note: The dean and departmental faculty can be petitioned, in extraordinary circumstances, to review and judge the cases of individual students who believe the spirit of the above requirements have been met yet fall short of the particular requirement. If the petition is accepted and approved by the faculty and dean of graduate education, a signed copy will be sent to the registrar for inclusion in the student’s permanent record.

Definition of Grades
Grades representing the students’ progress in each of the courses for which they are enrolled are given on a grade report form at the end of each term of attendance. The letter grades are as follows:

<table>
<thead>
<tr>
<th>GRADE</th>
<th>DESCRIPTION</th>
<th>QUALITY POINTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Excellent</td>
<td>4.0</td>
</tr>
<tr>
<td>A-</td>
<td></td>
<td>3.67</td>
</tr>
<tr>
<td>B+</td>
<td></td>
<td>3.33</td>
</tr>
<tr>
<td>B</td>
<td>Above Average</td>
<td>3.0</td>
</tr>
<tr>
<td>B-</td>
<td></td>
<td>2.67</td>
</tr>
<tr>
<td>C+</td>
<td>Satisfactory</td>
<td>2.33</td>
</tr>
<tr>
<td>C</td>
<td></td>
<td>2.0</td>
</tr>
<tr>
<td>C-</td>
<td></td>
<td>1.67</td>
</tr>
<tr>
<td>D</td>
<td>Minimum Passing Grade</td>
<td>1.0</td>
</tr>
<tr>
<td>F</td>
<td>Failure</td>
<td>0.0</td>
</tr>
</tbody>
</table>

C- and below grades do not count toward the fulfillment of program requirements for a graduate degree. The grades of all courses attempted by graduate students will count in the calculation of the cumulative grade point average. The program cumulative grade point average shall average 3.0 (B) as a graduation requirement. The dean of the college or their designee must approve all applications for graduate courses a student wishes to repeat.

The GPA is computed by the following formula: GPA = total quality points earned divided by total credit hours attempted. There are other evaluations of course work that do not affect GPA calculations. Only I
and R (as described below) can be assigned by individual instructor at the end of a term.

**Registered (R)**—A permanent grade used in graduate coursework indicating that a student has registered for a given course but has yet to meet the total requirements for the course or has continuing requirements to be met. The grade is given in graduate thesis work. Completion of this work will be noted by having the approved/accepted thesis or dissertation title, as received by the registrar from the department, added to the student’s permanent record. Full tuition is charged for these courses. “R” graded courses are allowed in the calculation of the residency requirement for graduate programs; however, they do not affect GPA calculations. A student may receive a grade of “U” or “I” in a given term of an “R” graded course. A “U” grade in this case carries no credit and the course must be repeated.

**Withdrawn (W)**—A grade that indicates an official course withdrawal has been processed. See policy D05.1V.

**Satisfactory (S)**—A satisfactory grade at the graduate level may only apply to seminar, cooperative work experience, study abroad affiliate programs, and internship courses where programs have determined that a traditional alpha system letter grade is inappropriate. An “S” grade at the graduate level carries no quality points and therefore does not enter into a GPA calculation. A student may receive a grade of “U” or “I” in an “S” graded course. In this case, a “U” grade carries no credit and the course must be repeated. No more than 15% of a program’s degree credits may be “S” graded courses.

**Incomplete (I)**—When an instructor observes conditions beyond the control of a student such that the student is unable to complete course requirements in the given term or session, the instructor may assign an Incomplete notation (“I”) to a student. The instructor determines and advises the student of the due date, not to exceed two terms including summer session but excluding intersession, by which the student must complete course requirements. If the registrar has not received a “Change of Grade” form from the professor after two terms including summer session but excluding intersession, then the Incomplete becomes an “F” grade or a “U” grade if the “I” was associated with an “R” or “S” graded graduate course. An extension of time may be granted at the discretion of the instructor. Credit hours are not earned and the GPA is not affected until a permanent grade is assigned.

**Unsatisfactory (U)**—A permanent grade used in certain graduate coursework indicating that a student made unsatisfactory progress towards completing the course requirements. No credit hours are earned for a “U” grade and the “U” grade does not affect the calculation of quality points or GPA. A “U” grade in an “R” or “S” graded course carries no credit and the course must be repeated.

If there are extenuating circumstances which render an instructor unable to assign a grade or evaluate a student’s work and assign a grade to replace an “Incomplete” notation, the head of the academic unit in which the course was taught will select an instructor to act in the place of the original instructor. After appropriate evaluation of the student’s work, that instructor will assign a grade in place of the “Incomplete” notation.

**Waived Courses (WV)**—Those courses eliminated from the list of requirements that a student must take to graduate. For undergraduate students, only physical education courses and cooperative work experience may be waived because of previously completed experience.

For graduate students, required courses may be waived because of previously completed academic work but in no case shall the resulting graduate program requirements be reduced below 30 semester hours. In addition, waiver credit for graduate courses can be applied only towards required courses and not towards elective courses. The process of waiving courses and thereby reducing graduate program requirements is not to be confused with the process of substituting specific courses for published requirements with an equal number of credit hours, thus retaining the total number of credit hours in the specified program. The total combined amount of credit applied through external (non-RIT) transfer credit, waived courses, and credit by competency may not exceed 20% of the total credits in the graduate program as noted in the graduate catalog.

**X Grade (X)**—Assigned for successful completion of various assessments as defined in Policy D02.0 Admissions. “X” grade for graduate students indicates Credit by Competency (graduate) (See policy D02.1.2).

“X” graded courses do not count toward the residency requirement and do not affect GPA calculations. Credit hours are included as hours earned.

For graduate students, the total combined amount of credit applied through external (non-RIT) transfer credit, waived courses, and credit by competency may not exceed 20% of the total credits in the graduate program as noted in the graduate catalog. Exceptions to the maximum credit by exam for graduate programs can be granted by the Graduate Council in unusual circumstances upon appeal from the dean of the college involved. For programs housed outside the college structure, the approval of the director of the academic unit is required.

**Audit (AU)**—Indicates a student has officially registered for the course for no credit. Courses available for audit are at the discretion of the college or academic unit. With permission of the instructor, the student may elect to take examinations and do course assignments. Audited courses do not count toward the residency or other degree requirements. Credit hours are not earned and GPA calculations are not affected.

A student may register for audit any time during the official registration period for the term. However, a student may not change from audit to credit or credit to audit after the official add/drop period (first seven calendar days, excluding Sundays and holidays, of the fall, and spring terms and summer session). See Policy D03.0 - Registration. Changes from audit to credit must be accompanied by full payment of tuition.
Changing Grades

Once a grade has been reported by an instructor, it is not within the right of any person to change this unless an actual error has been made in computing or recording it. If an error has been made, the instructor must complete the appropriate form. The completed form must be approved by the head of the department in which the instructor teaches. When approved, the form is then sent to the registrar. There is, however, an appeal procedure for disputed grades through the Academic Conduct Committee of the college in which the course is offered.

Academic Probation and Suspension

Any degree-seeking graduate student will be placed on probation or suspended from the university according to the criteria enumerated below. All actions are taken at the end of the term; however, a student may petition the dean of their home college for reconsideration of probation or suspension should the removal of an incomplete grade (I) raise the program grade point average above those stated below. For programs housed outside the college structure, the approval of the director of the academic program in which the enrollment is requested is required.

Each degree-seeking graduate student will generate two different grade point averages that appear on the transcript - cumulative and term averages. The university cumulative average reflects all course work completed at RIT at the graduate level. The term average reflects a single term of academic activity. In addition, each graduate student has a program average used for degree certification that is manually calculated by the academic unit and reflects course work completed at RIT applicable to graduation in a student's current academic program. The current academic program refers to the university and college degree course requirements specified by the degree granting college and noted in the graduate catalog.

In addition to the university requirements outlined below, individual colleges and/or programs may define more rigorous requirements for maintaining good academic standing. This information must be approved by the dean, clearly defined within published college policy, communicated in the university bulletin, and communicated to the Provost's Office. For programs housed outside the college structure, the approval of the director of the academic unit is required.

1. Any degree-seeking graduate student whose cumulative and/or program grade point average (see D5.0 - Grades, section VII) falls below 3.00 after 9 credit hours (attempted or earned) subsequently will be placed on probation and counseled by the graduate program director (or his/her designee) concerning continuation in the graduate program.
2. Students on probation must raise their program cumulative and program grade point average to 3.00 within 9 credit hours (attempted or earned) or they will be suspended from the graduate program.
3. A graduate student suspended for academic reasons, must apply for readmission.
4. A suspended student cannot enroll in any credit or non-credit course at the university while on suspension.
5. A suspended student may appeal a suspension decision. Individual colleges and/or programs may set limitations on the number of appeals a student can submit.
6. A suspension may be waived upon written appeal to the student's home program. Final suspension waiver approval requires dean (or designee) approval. For programs housed outside the college structure, the approval of the director of the academic unit in which the enrollment is requested is required.
7. A suspended student may be required to satisfy specific academic conditions imposed in order to be considered for readmission to his/her program.
8. A suspended student may be admitted to another program if it is approved by the dean (or designee) of the college in which enrollment is requested. For programs housed outside the college structure, the approval of the director of the academic program in which the enrollment is requested is required.

Non-Degree-Seeking Undergraduate and Graduate Policy

Any non-degree-seeking undergraduate student who has a cumulative GPA below 2.00 after 15 credit hours or non-degree-seeking graduate student who has a cumulative GPA below 3.00 after 9 credit hours (attempted or earned) may not register for credit or non-credit courses without the specific approval of the department head offering the course(s).

Student Conduct Policies and Procedures

Standards for Student Conduct

The RIT community intends that campus life will provide opportunities for students to exercise individual responsibility and places high priority on self-regulation by its members. All members of the community are responsible for encouraging positive behavior by others, as well as preventing or correcting conduct by others that is detrimental to RIT’s educational mission and values. As an educational community, RIT strives for a campus environment that is free from coercive or exploitative behavior by its members. Moreover, it sets high standards that challenge students to develop values that enhance their lives professionally and will enable them to contribute constructively to society.
RIT enjoys a diversity of backgrounds, lifestyles, and personal value systems among those who compose the academic community. Students, however, are expected to observe and respect the policies and standards of the university and the right of individuals to hold values that differ from their own and those expressed by RIT. Students are encouraged to review the Student Rights and Responsibilities Handbook for information regarding campus policies and expectations of student conduct.

Students must recognize that they are members of the local, state, and federal communities, and that they are obliged to live in accord with the law without special privilege because of their status as students or temporary residents.

RIT offers a number of services for graduate students. Those described in the following pages are among the most frequently used.

**RIT Honor Code**

Integrity and strong moral character are valued and expected within and outside of the RIT community. As members of the RIT campus community, including students, trustees, faculty, staff, and administrators, we will:

- Demonstrate civility, respect, decency and sensitivity towards our fellow members of the RIT community, and recognize that all individuals at this university are part of the larger RIT family, and as such are entitled to that support and mutual respect which they deserve.

- Conduct ourselves with the highest standards of moral and ethical behavior. Such behavior includes taking responsibility for our own personal choices, decisions and academic and professional work.

- Affirm through the daily demonstration of these ideals that RIT is a university devoted to the pursuit of knowledge and a free exchange of ideas in an open and respectful climate.

**Computer Security and Safeguards**

RIT’s Code of Conduct for Computer and Network Use guides campus-wide use of all computers and networks. This document, found online at www.rit.edu/computerconduct, outlines RIT’s official policy related to ethical use of computing and network resources. ITS put into place multiple safeguards to protect RIT’s network environment and the integrity of individual user accounts. Additionally, ITS provides all students, faculty, and staff with antivirus software free of charge.

**Health Policies**

**Health/Medical Records**

Medical records are confidential. Information will not be released without the written consent of the student. Exceptions to this rule are made only when required by the public health laws of New York state or a court-ordered subpoena or in a life-threatening situation.

**New York State and RIT Immunization Requirements**

New York state public law requires that all students enrolled for more than six credit hours in a term and born after January 1, 1957, must provide proof of having received the appropriate immunizations against measles, mumps, and rubella, and to sign a meningitis awareness form. The law applies to all full time and part time students including RIT employees. Immunization requirements include:

- Two MMR vaccinations at least one month apart and after the first birthday;

- A Meningitis Awareness Form, signed by all students regardless of age; and

- Immunization against meningitis, which is required by RIT for all students age 21 and under.

Failure to comply with the New York State immunization law may result in exclusion from classes and the campus, and a $200 fine.

**Covid Vaccine Requirement**

All RIT students are required to be fully vaccinated. Individuals are considered fully vaccinated 1) two weeks after their second dose in a 2-dose series (such as the Pfizer or Moderna vaccines); or 2) two weeks after a single-dose vaccine (such as Johnson & Johnson's Janssen vaccine). For more information on RIT's Covid vaccination policy, please visit rit.edu/ready/rit-safety-plan.

NOTE: An email notification is sent to students’ RIT email account with directions to complete the necessary health information through the Student Health Center portal. Please note that the immunization form is to be completed by the student online and then downloaded and taken to the student’s health provider or school official for verification. The form must then be forwarded to the Student Health Center for approval (fax: 585-475-7530).
In compliance with the federal Student-Right-to-Know and Campus Security Act, and regulations of the U.S. Department of Education, RIT provides the following information to current and prospective students:

**Outcomes Rate**

Each year RIT gathers information about the career plans of its graduates in accordance with national standards established for the National Association of Colleges and Employers (NACE). These outcome summaries are provided by the university overall at both the undergraduate and graduate levels and reflect the career activities of graduates within six months of degree certification. Outcomes rates describe the percentage of graduates who have entered the workforce, enrolled for further full-time study, or are pursuing alternative plans (e.g., military service, volunteer service, or those not seeking employment at this time). The outcomes rate for the class of 2022 was 94.7% based on a 78.1% knowledge rate (the percent of graduates that RIT had verifiable information on).

**Student Persistence and Graduation**

For **Master's Degree Students**—One year retention rate was 89.1% for the students starting in the 2020-21 academic year. The five year graduation rate was 90% for the students starting in the 2016-17 academic year.

For **Doctoral Degree Students**—One year retention rate was 87.8% for the students starting in the 2020-21 academic year. The seven year graduation rate was 90% for the students starting in the 2014-15 academic year.

**Public Safety**

The Public Safety Department is open 24-hours-a-day and is located in Grace Watson Hall. The department encourages the RIT community to take responsibility for their safety by staying informed of these services and reporting suspicious activity. Although each individual is ultimately responsible for their own personal safety, learning and practicing basic safety precautions can enhance one's well being. RIT’s Public Safety Report is available at: [www.rit.edu/publicsafety/sites/rit.edu.publicsafety/files/2021AnnualSecurityReport.pdf](http://www.rit.edu/publicsafety/sites/rit.edu.publicsafety/files/2021AnnualSecurityReport.pdf). The department provides the following services:

- **Blue Light Call Boxes**—Identified by a blue light and located across campus, these call boxes provide a direct line to Public Safety 24-hours-a-day. The location of the call is automatically recorded at the Public Safety Communications Center, making it possible for hearing individuals to also use the call boxes. The call boxes may be used to request an escort, assist a motorist, report suspicious individuals or activity, or request access to a locked building or room.

- **Mobile Escort Service**—Available seven-days-a-week, on a timed schedule between 11 p.m. and 3 a.m.

- **Lost and Found**—All lost and found items are stored by Public Safety. Report a lost item at rit.edu/publicsafety/safety/lostitems.html (requires RIT computer account).

- **Emergency Notification**—Family members may contact Public Safety at (585) 475-2853 or TEXT (585) 205-8333 to make an emergency notification to a student. Public Safety will locate the student and relay the message.

- **Awareness Programs**—Public safety hosts a variety of prevention awareness programs and services on topics including crime prevention, personal safety, and alcohol awareness. A monthly newsletter, RIT Ready, is distributed to students, faculty, and staff to bolster emergency preparedness on campus.

- **Annual Security and Fire Safety Report**—Public Safety’s Annual Security and Fire Safety Report is available online ([www.rit.edu/fa/compliance/student-right-know](http://www.rit.edu/fa/compliance/student-right-know)) and offers a description of security practices and information on reported occurrences of crime.

- **Confidential Tip Line**—This service is to obtain information that is unattainable through conventional methods and to alert public safety to endangering behavior that might go otherwise unreported. Individuals who utilize the tip line are encouraged to leave their names and contact information; however, they will not be contacted. An online form is available at rit.edu/publicsafety/forms/tipline.

- **Crime Statistics**—The Advisory Committee on Public Safety provides, upon request, all campus crime statistics as reported to the Department of Education. RIT crime statistics can be found at the Department of Education website (ope.ed.gov/security) or by contacting Public Safety. A hard copy of reported crime statistics required to be ascertainment under Title 20 of the U.S. Code Section 1092(f) will be mailed within 10 days of the request.

- **Sexual Assault Information and CARES**—Confidential counseling services are available to anyone in need by calling (585) 546-2777 (voice/TTY). RIT’s Campus Advocacy Response and Support (CARES) provides confidential and crisis intervention and support services for relationship concerns. Contact (585) 295-3533 at any time for assistance.

- **Emergency Preparedness**—RIT regularly communicates, prepares, and practices emergency management with public safety personnel and campus managers from various departments. If necessary, we will provide updated information through broadcast email, mass notification system (RIT ALERT), voicemail, ALERTUS beacons, and the university’s website at rit.edu.
Administration and Trustees

President
David C. Munson, Jr., Ph.D., RIT President

Deans
Neeraj Buch, Ph.D., Dean of Undergraduate Studies and Associate Provost for Student Success
Gerard Buckley, Ed.D., President, National Technical Institute for the Deaf; Vice President and Dean, RIT
Doreen Edwards, Ph.D., Dean, Kate Gleason College of Engineering
James Hall, Ph.D., Dean of University Studies; Executive Director, School of Individualized Study
André O. Hudson, Ph.D., Dean, College of Science
Matt Huenerfauth, Ph.D., Dean, Golisano College of Computing and Information Sciences
Todd S. Joki, Ed.D., Dean, College of Art and Design
Kelly Norris Martin, Ph.D., Dean, College of Liberal Arts
Jacqueline R. Mozrall, Ph.D., Dean, Saunders College of Business
Nabil Nasr, Ph.D., Associate Provost, Academic Affairs; Director, Golisano Institute of Sustainability
S. Manian Ramkumar, Ph.D., Dean, College of Engineering Technology
Diane Slusarski, Ph.D., Associate Provost and Dean, RIT Graduate School
Yong Tai Wang, Ph.D., Dean, College of Health Sciences and Technology

President’s Administrative Council
Karen Barrows, Chief of Staff
Gerard Buckley, President, NTID/ Vice President and Dean, RIT
Enid Cardinal, Senior Advisor to the President for Strategic Planning and Sustainability
Phil Castleberry, Vice President for University Advancement
Lisa Chase, Vice President and Secretary of the University
Bobby Colon, Vice President and General Counsel
Prabu David, Provost and Senior Vice President for Academic Affairs
Robert Finnerty, Associate Provost of University Communications
Vanessa J. Herman, Vice President for Government and Community Relations
Keith Jenkins, Ph.D., Vice President and Associate Provost for Diversity and Inclusion
Sandra S. Johnson, Ed.D., Senior Vice President, Student Affairs
Joe Johnston, Ombudsperson
Colleen Peterson, Interim Vice President Enrollment Management
Jo Ellen Pinkham, Associate Vice President and Chief Human Resources Officer
Ryne Raffaele, Ph.D., Vice President for Research
John Trierweiler, Vice President, Marketing and Communications, Chief Marketing Officer
James H. Watters, Ph.D., Senior Vice President and Treasurer

Academic Affairs Leadership Team
Prabu David, Provost and Senior Vice President for Academic Affairs
Christine M. Licata, Ed.S., Ed.D., Vice Provost for Academic Affairs
Theresa Hannigan, Chief Learning Experience Officer
Keith Jenkins, Ph.D., Vice President and Associate Provost for Diversity and Inclusion
Joseph Loffredo, Associate Vice President for Academic Affairs and Registrar
LaVerne McQuiller Williams, Associate Provost for Faculty Affairs
James Myers, Ph.D., Associate Provost of International Education and Global Programs
Susan Provenzano, Assistant Vice President, Academic Affairs
Ryne Raffaele, Ph.D., Vice President for Research
Dennis Di Lorenzo, Executive Director, RIT Certified
Marcia Trauernicht, Director of RIT Libraries

Board of Trustees
Robert W. August, Managing Partner, Laser Wash Group, LLC
Mark G. Barberio ‘85, Principal, Markkapital, LLC
Brooks H. Bower ‘74, Chairman and CEO, Papercone Corp. East
Andrew N. Brenneman ‘86, ’88, Senior Client Director, T-Mobile USA
David J. Burns, Principal and Founder, Global Business Advisory Services LLC
Carol B. Cala ’97, ’00, Retired Vice President of Corporate Energy, ES&H, Lockheed Martin Corporation
Dale J. Davis, Esq. ’96, Chief IP Counsel and Deputy General Counsel, Cummins Inc.
Richard “Chip” Davis, Ph.D., Chief Executive Officer, Rochester Regional Health
Hyacinth “Hope” V. Drummond ’91, Founder, Dreamseeds Children’s Programs
Victoria Decker ’93, RIT Women’s Council President
Arthur A. Gosnell, Chairman and CEO, Stonehurst Capital, Inc.
Jeffrey K. Harris ’75, Chair, Board of Trustees, Rochester Institute of Technology, Retired Corporate Vice President, Situational Awareness, Lockheed Martin Corp.
Darshan N. Hiranandani ’02, ’03, Managing Director, Hiranandani Group
Susan R. Holliday ’85, Vice Chair, Board of Trustees, Rochester Institute of Technology, Former President and Publisher, Rochester Business Journal
Andrew R. Jacobson ’90, ’96, Enrolled Agent, AJ Tiger Tax Services
Richard A. Kittles, Ph.D. ’89, Senior VP for Research, Morehouse School of Medicine
Christopher Lehelfield, D.D.S., Elmwood Dental Group, PC
Pamela Lloyd-Ogoke ‘81, Chief of Community Integration Services & Supports, North Carolina Division of Vocational Rehabilitation Services, NTID NAG Chair
Britta Maclntosh ’89, Senior Vice President of Western Region & London Operations, Ameresco, Inc.
Austin W. McCord ’09, CEO, Casina Care, Inc.
Roosevelt “Ted” Mercer, CEO and Executive Director, Virginia Commercial Space Flight Authority
David C. Munson Jr., Ph.D., President, Rochester Institute of Technology
Sharon D. Napier ’04, Chair and Founder, Partners + Napier
Brian P. O’Shaughnessy ’81, ’84, Partner, Dinsmore & Shohl LLP
Gerard Q. Pierce ’77, CEO, HR Works, Inc.
Susan M. Puglia, Vice Chair, Board of Trustees, Rochester Institute of Technology, Retired Vice President, University Programs and Vice Chair, IBM Academy of Technology, IBM Corporation
Ronald S. Ricotta ’79, CEO and President, Century Mold Company, Inc.
Jorge M. Rodriguez ’15, CEO, Sorenson Communications Inc.
Nicholas M. Schneider ’10, Ph.D., Principle, Boston Consulting Group; RIT Alumni Association President
Frank S. Sklarsky ’78, Retired Executive Vice President and Chief Financial Officer, PPG Industries
Kevin J. Surace ’85, Chairman and CTO, Appvance Inc.
James P. Swift ’88, CEO, Buxton
Donald J. Truesdale ’87, Chairman Emeritus, Board of Trustees, Rochester Institute of Technology, CEO, Ardea Partners LLC
Clayton P. Turner ’90, Director, NASA Langley Research Center
Kim E. VanGelder ’86, Chief Information Officer and Sr. Vice President, Eastman Kodak Company
Chester N. Watson ’74, Retired General Auditor, General Motors Corporation
Dinah G. Weisberg ’97, ’03, President and CEO, REDCOM Laboratories, Inc.
Christine B. Whitman, Chair Emeritus, Board of Trustees, Rochester Institute of Technology, Chairman and CEO, Complemar Partners, Inc
Kathy M. Yu ’91
Ronald L. Zarrella, Chairman Emeritus, Bausch & Lomb, Inc.
Bruce R. James ’62, ’64, Chair Emeritus, Board of Trustees, Rochester Institute of Technology; Retired Public Printer of the United States, United States Government Printing Office; President & CEO, Nevada New-Tech Inc.
Herbert W. Jarvis, Former President and CEO, Sybron Corporation
Thomas F. Judson Jr., Chairman, The Pike Companies
Richard A. Kaplan, Retired CEO, CurAegis Technologies
Robert J. Kohler Jr. ’59, Retired Executive Vice President and General Manager, TRW Avionics & Surveillance Group
Joseph M. Lobozzo, II ’95, Former President and CEO, JML Optical Industries, Inc.
Lawrence J. Matteson, Retired Vice President, Imaging and Information Systems, Eastman Kodak Company
Thomas M. McDermott, Retired Chairman, CEO and President, Goulds Pumps, Inc.
Thomas S. Richards, Former Mayor, City of Rochester
Harris H. Rutsitsky ’56, ’91, Partner, The Greening Group
Richard E. Sands, Ph.D., Executive Vice Chairman, Constellation Brands, Inc.
E. Philip Saunders, Chairman, Saunders Management
Harry P. Trueheart III, Chairman Emeritus, Nixon Peabody LLP
Frederick T. Tucker ’63, Retired Executive Vice President and Deputy to the CEO, Motorola, Inc.
Judy B. von Bucher
Robert D. Wayland-Smith, Retired Vice President and Manager, Upstate Trust and Investment Division, Chase Manhattan Bank, N.A.
