

VIBRATION

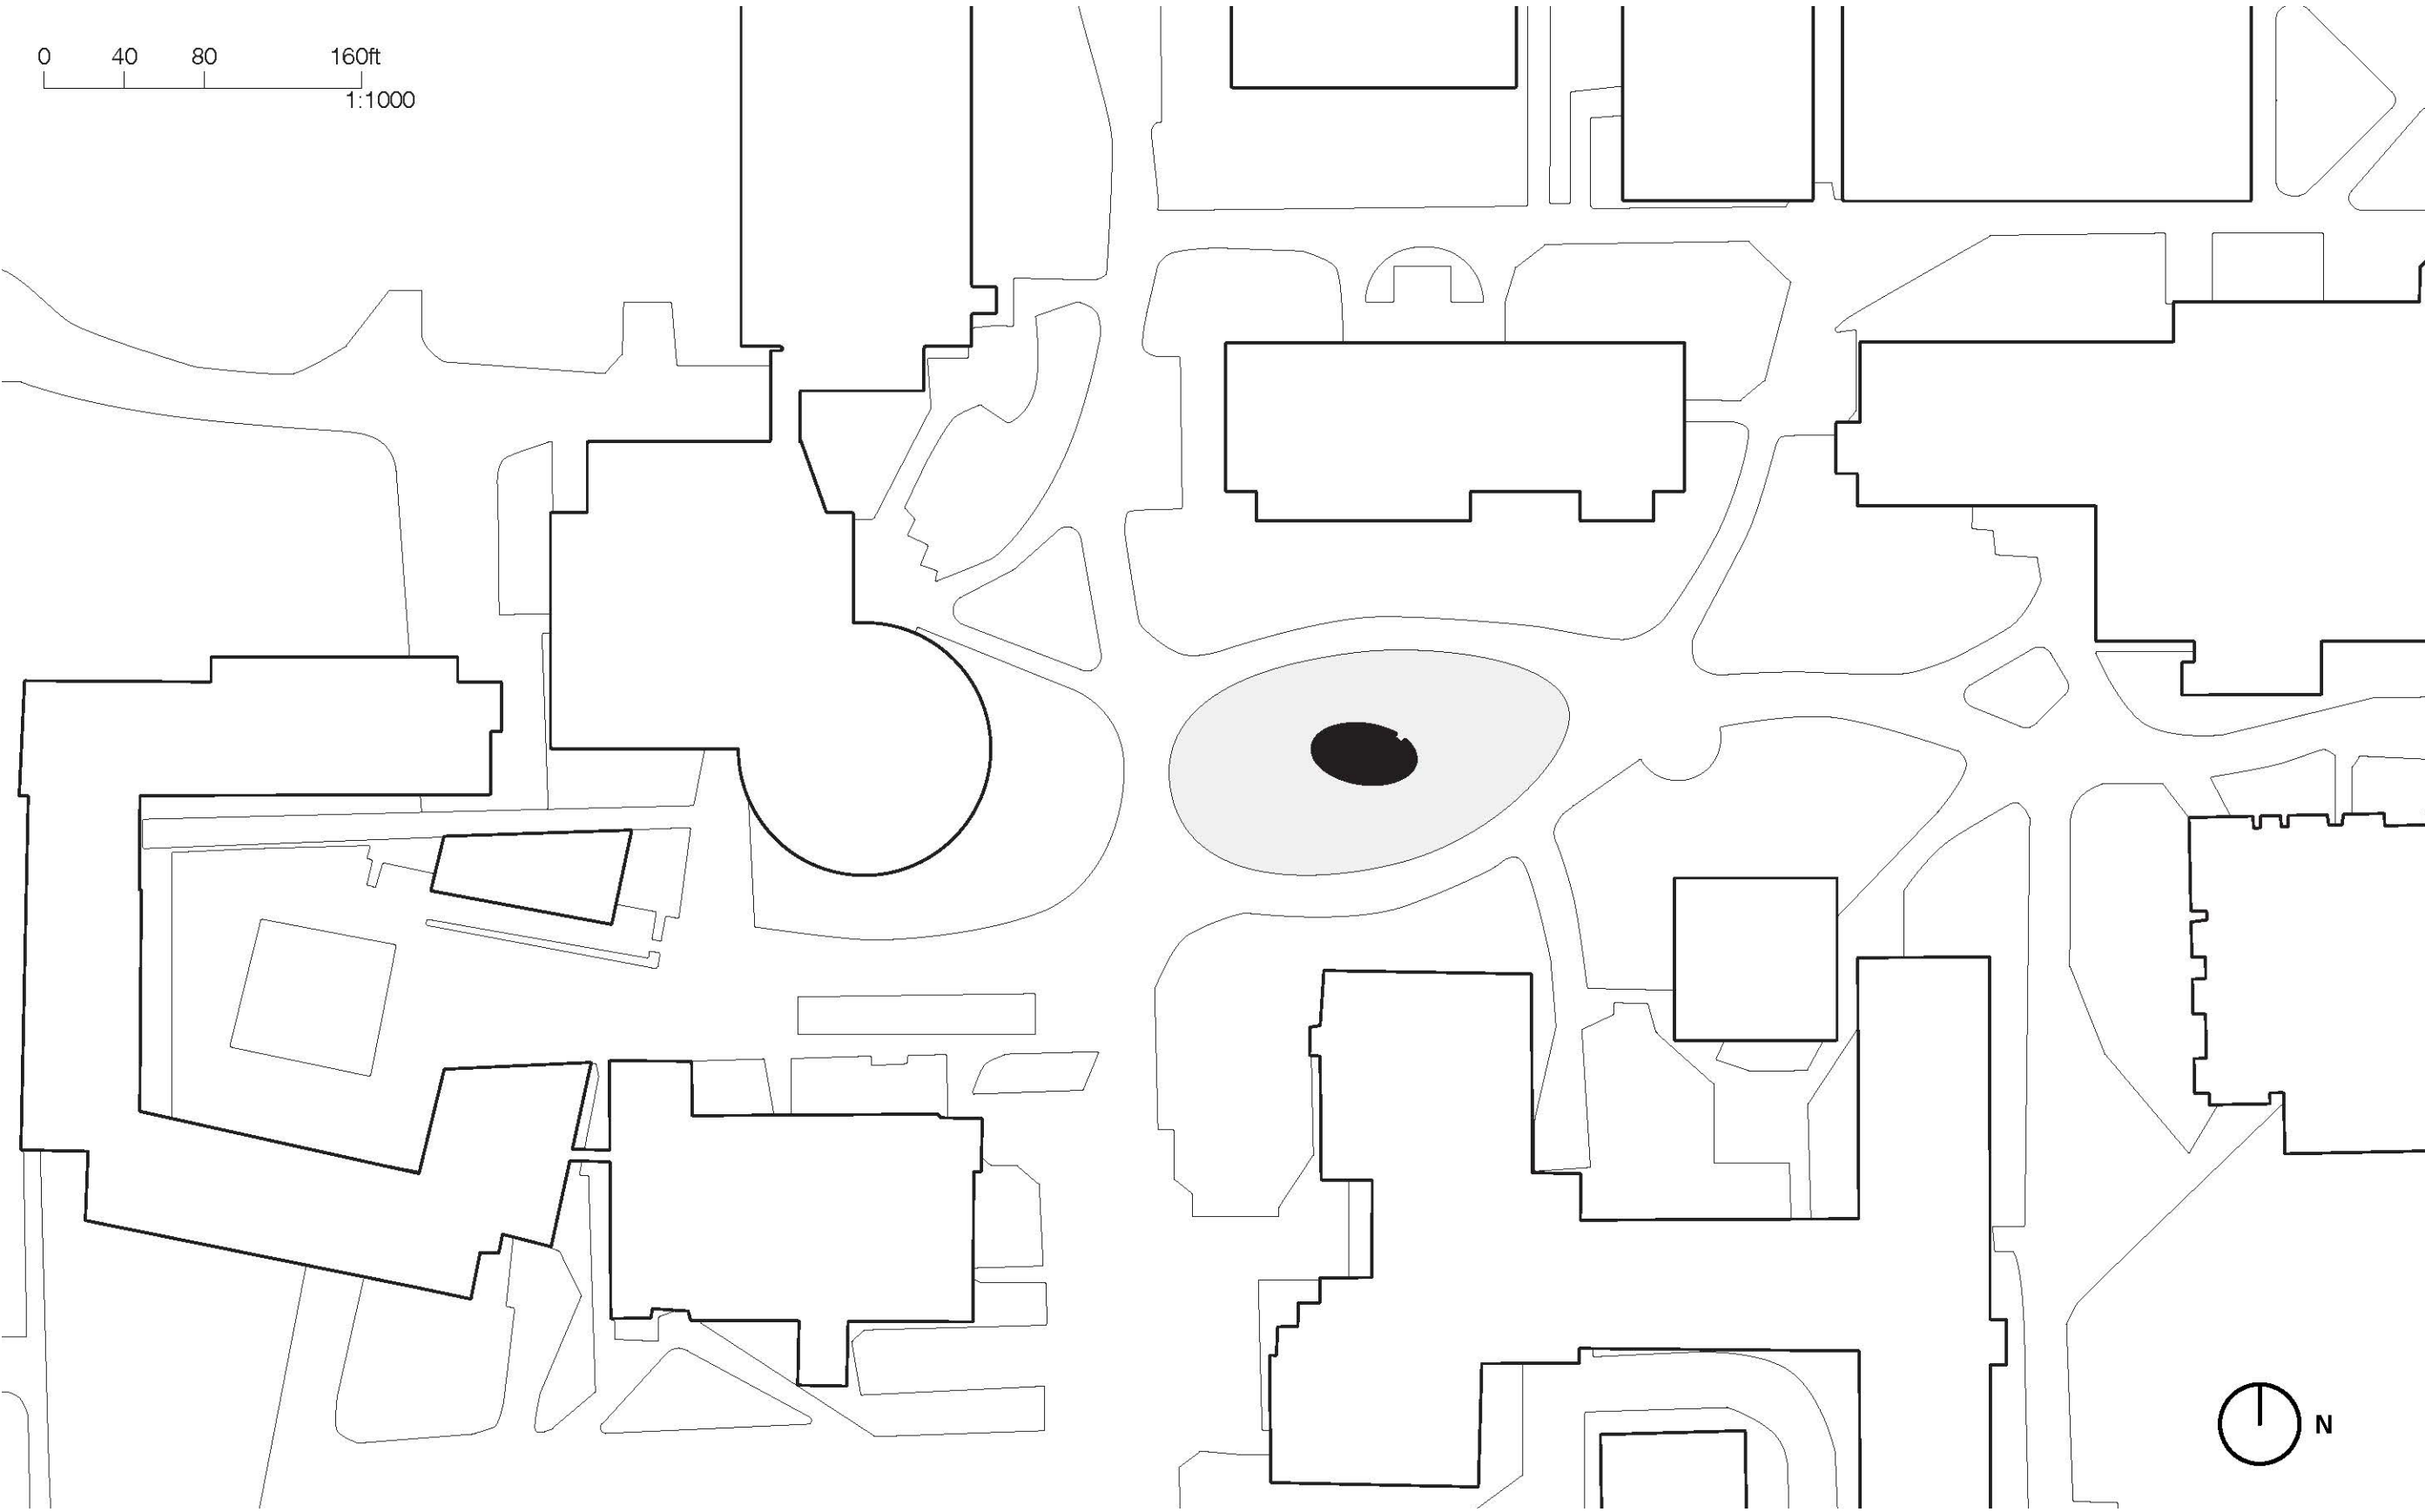

This outdoor interactive installation emphasizes the power of vibration as a unique form of communication between individuals on campus.

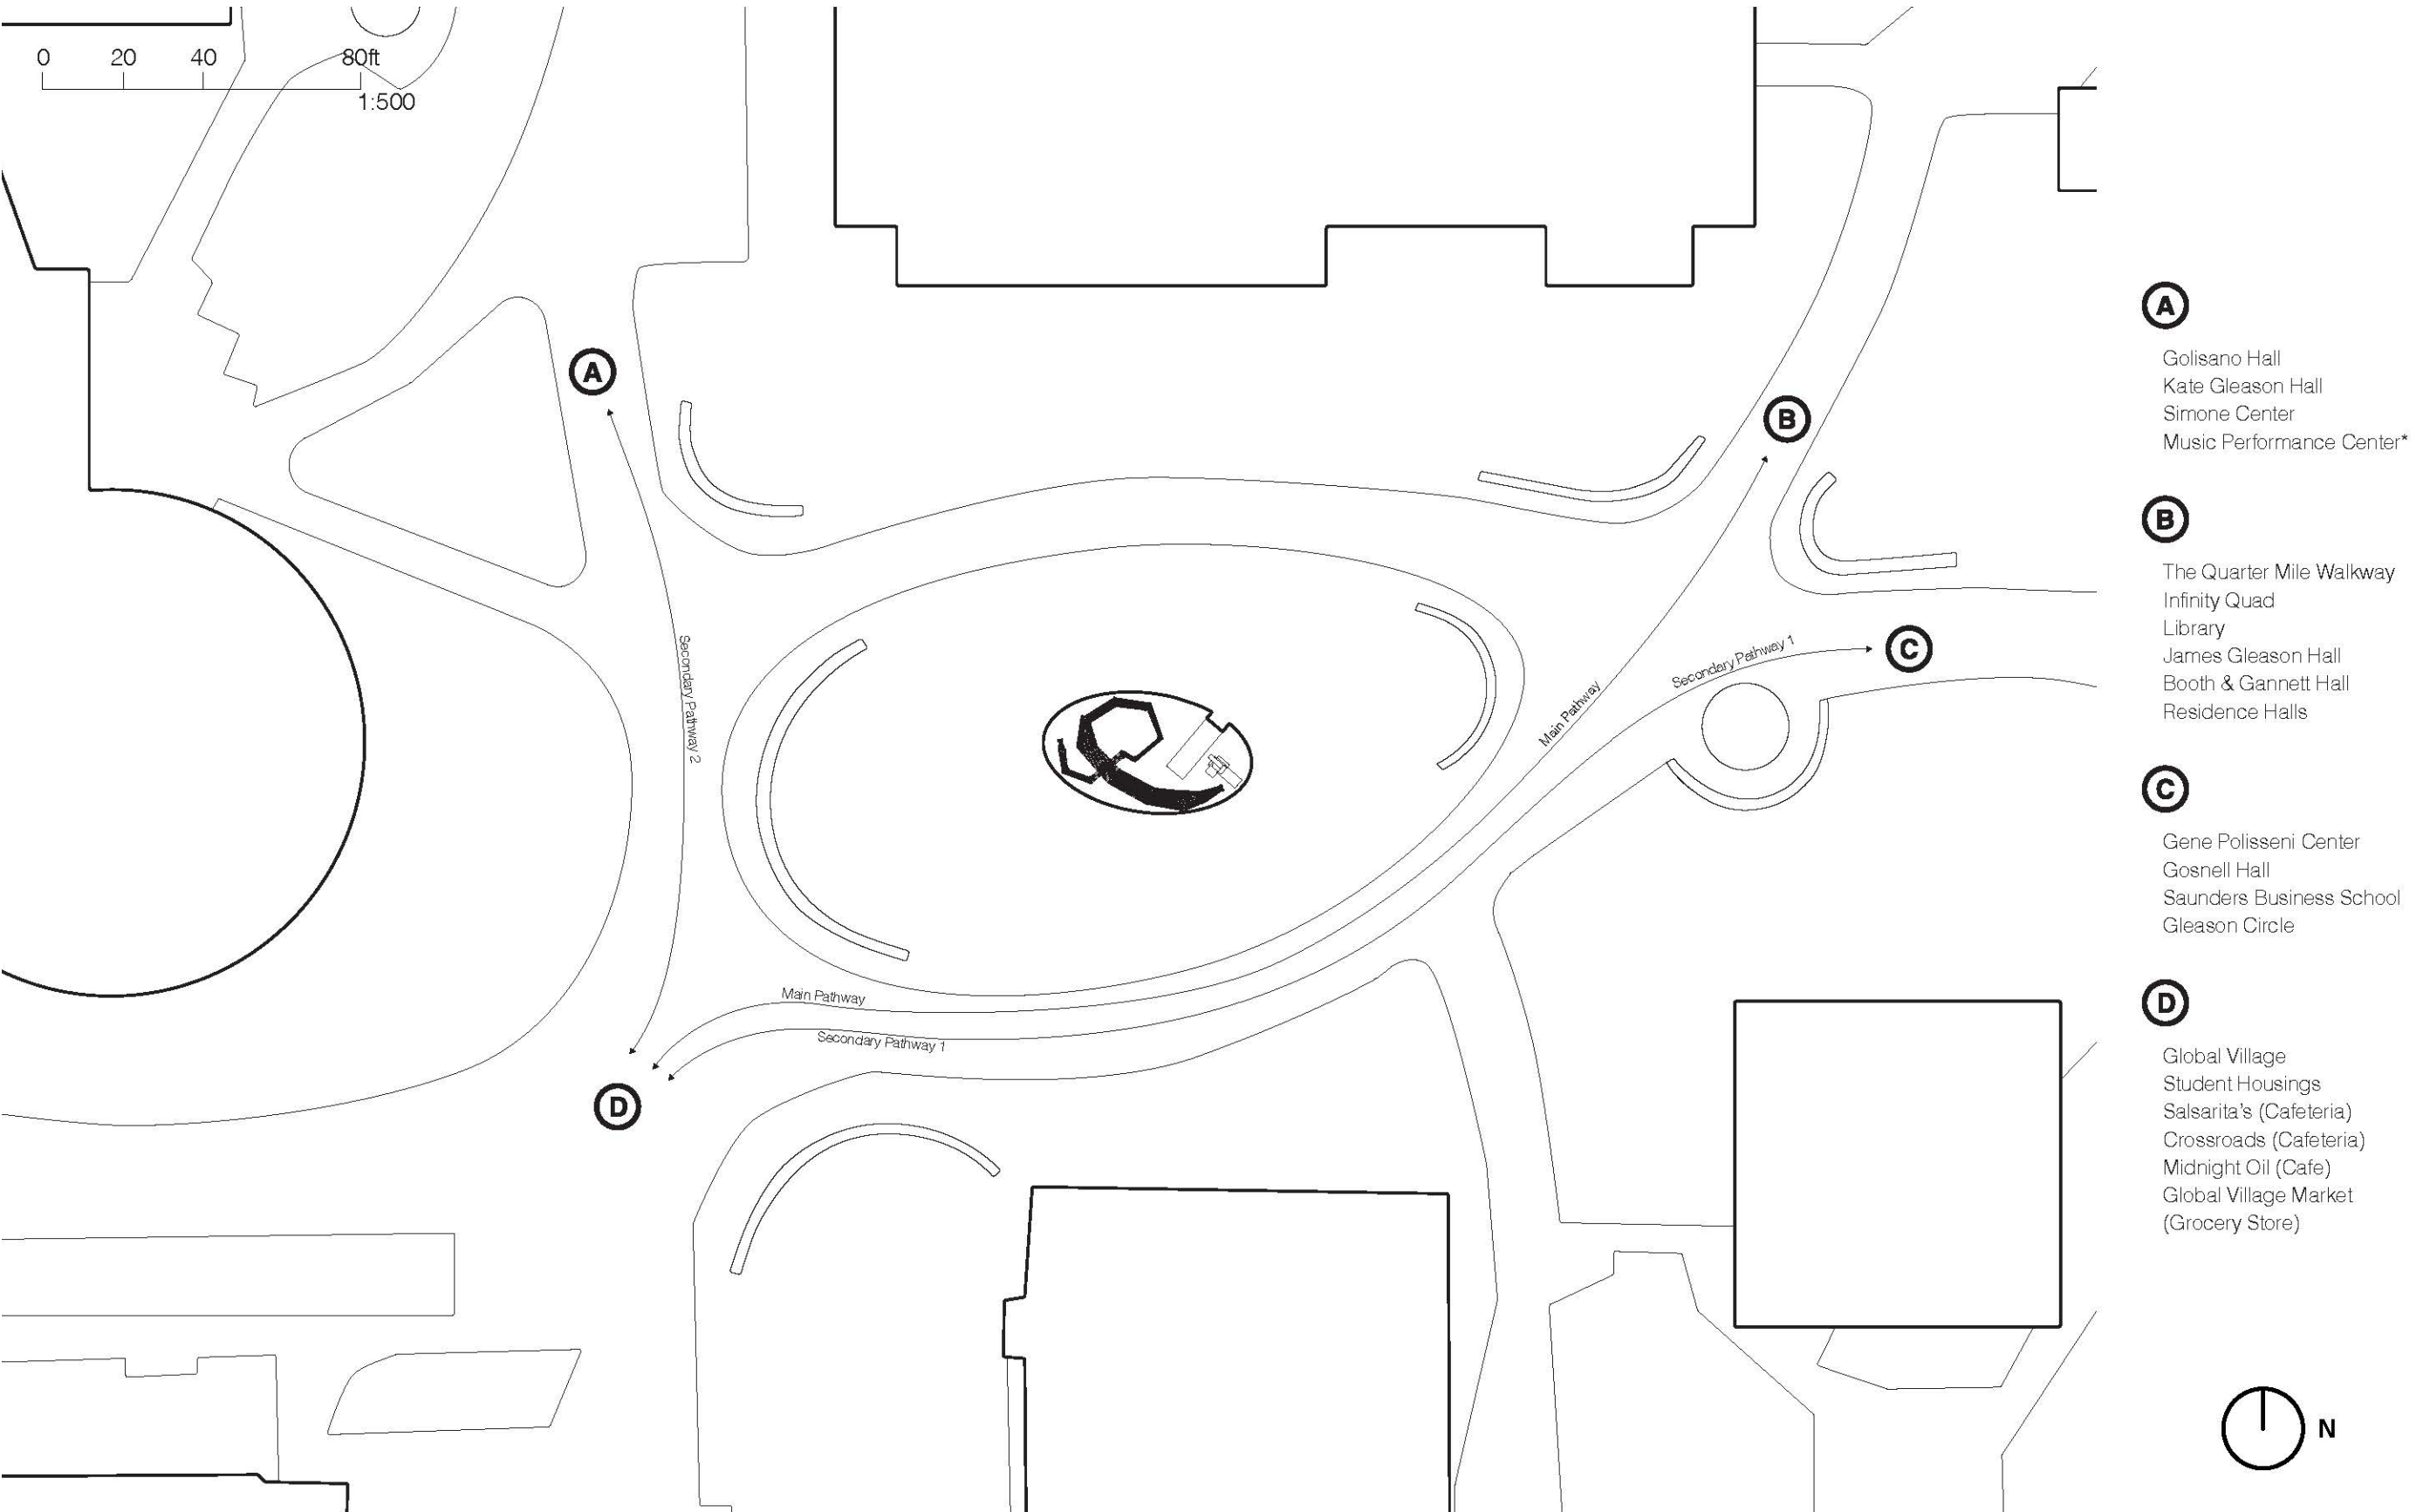

Through the vibrations of interconnected rope structure, people become aware of each other and can naturally interact with one another. As a result, this installation not only enriches the campus environment but also fosters a stronger sense of community and connectivity among the its members.

The installation transforms an overlooked space between the Global Village and academic buildings into a dynamic, multi-purpose area that encourages individuals to engage with one another. Those who encounter this installation will find themselves relishing their surroundings and immersing in a shared and harmonious experience together.

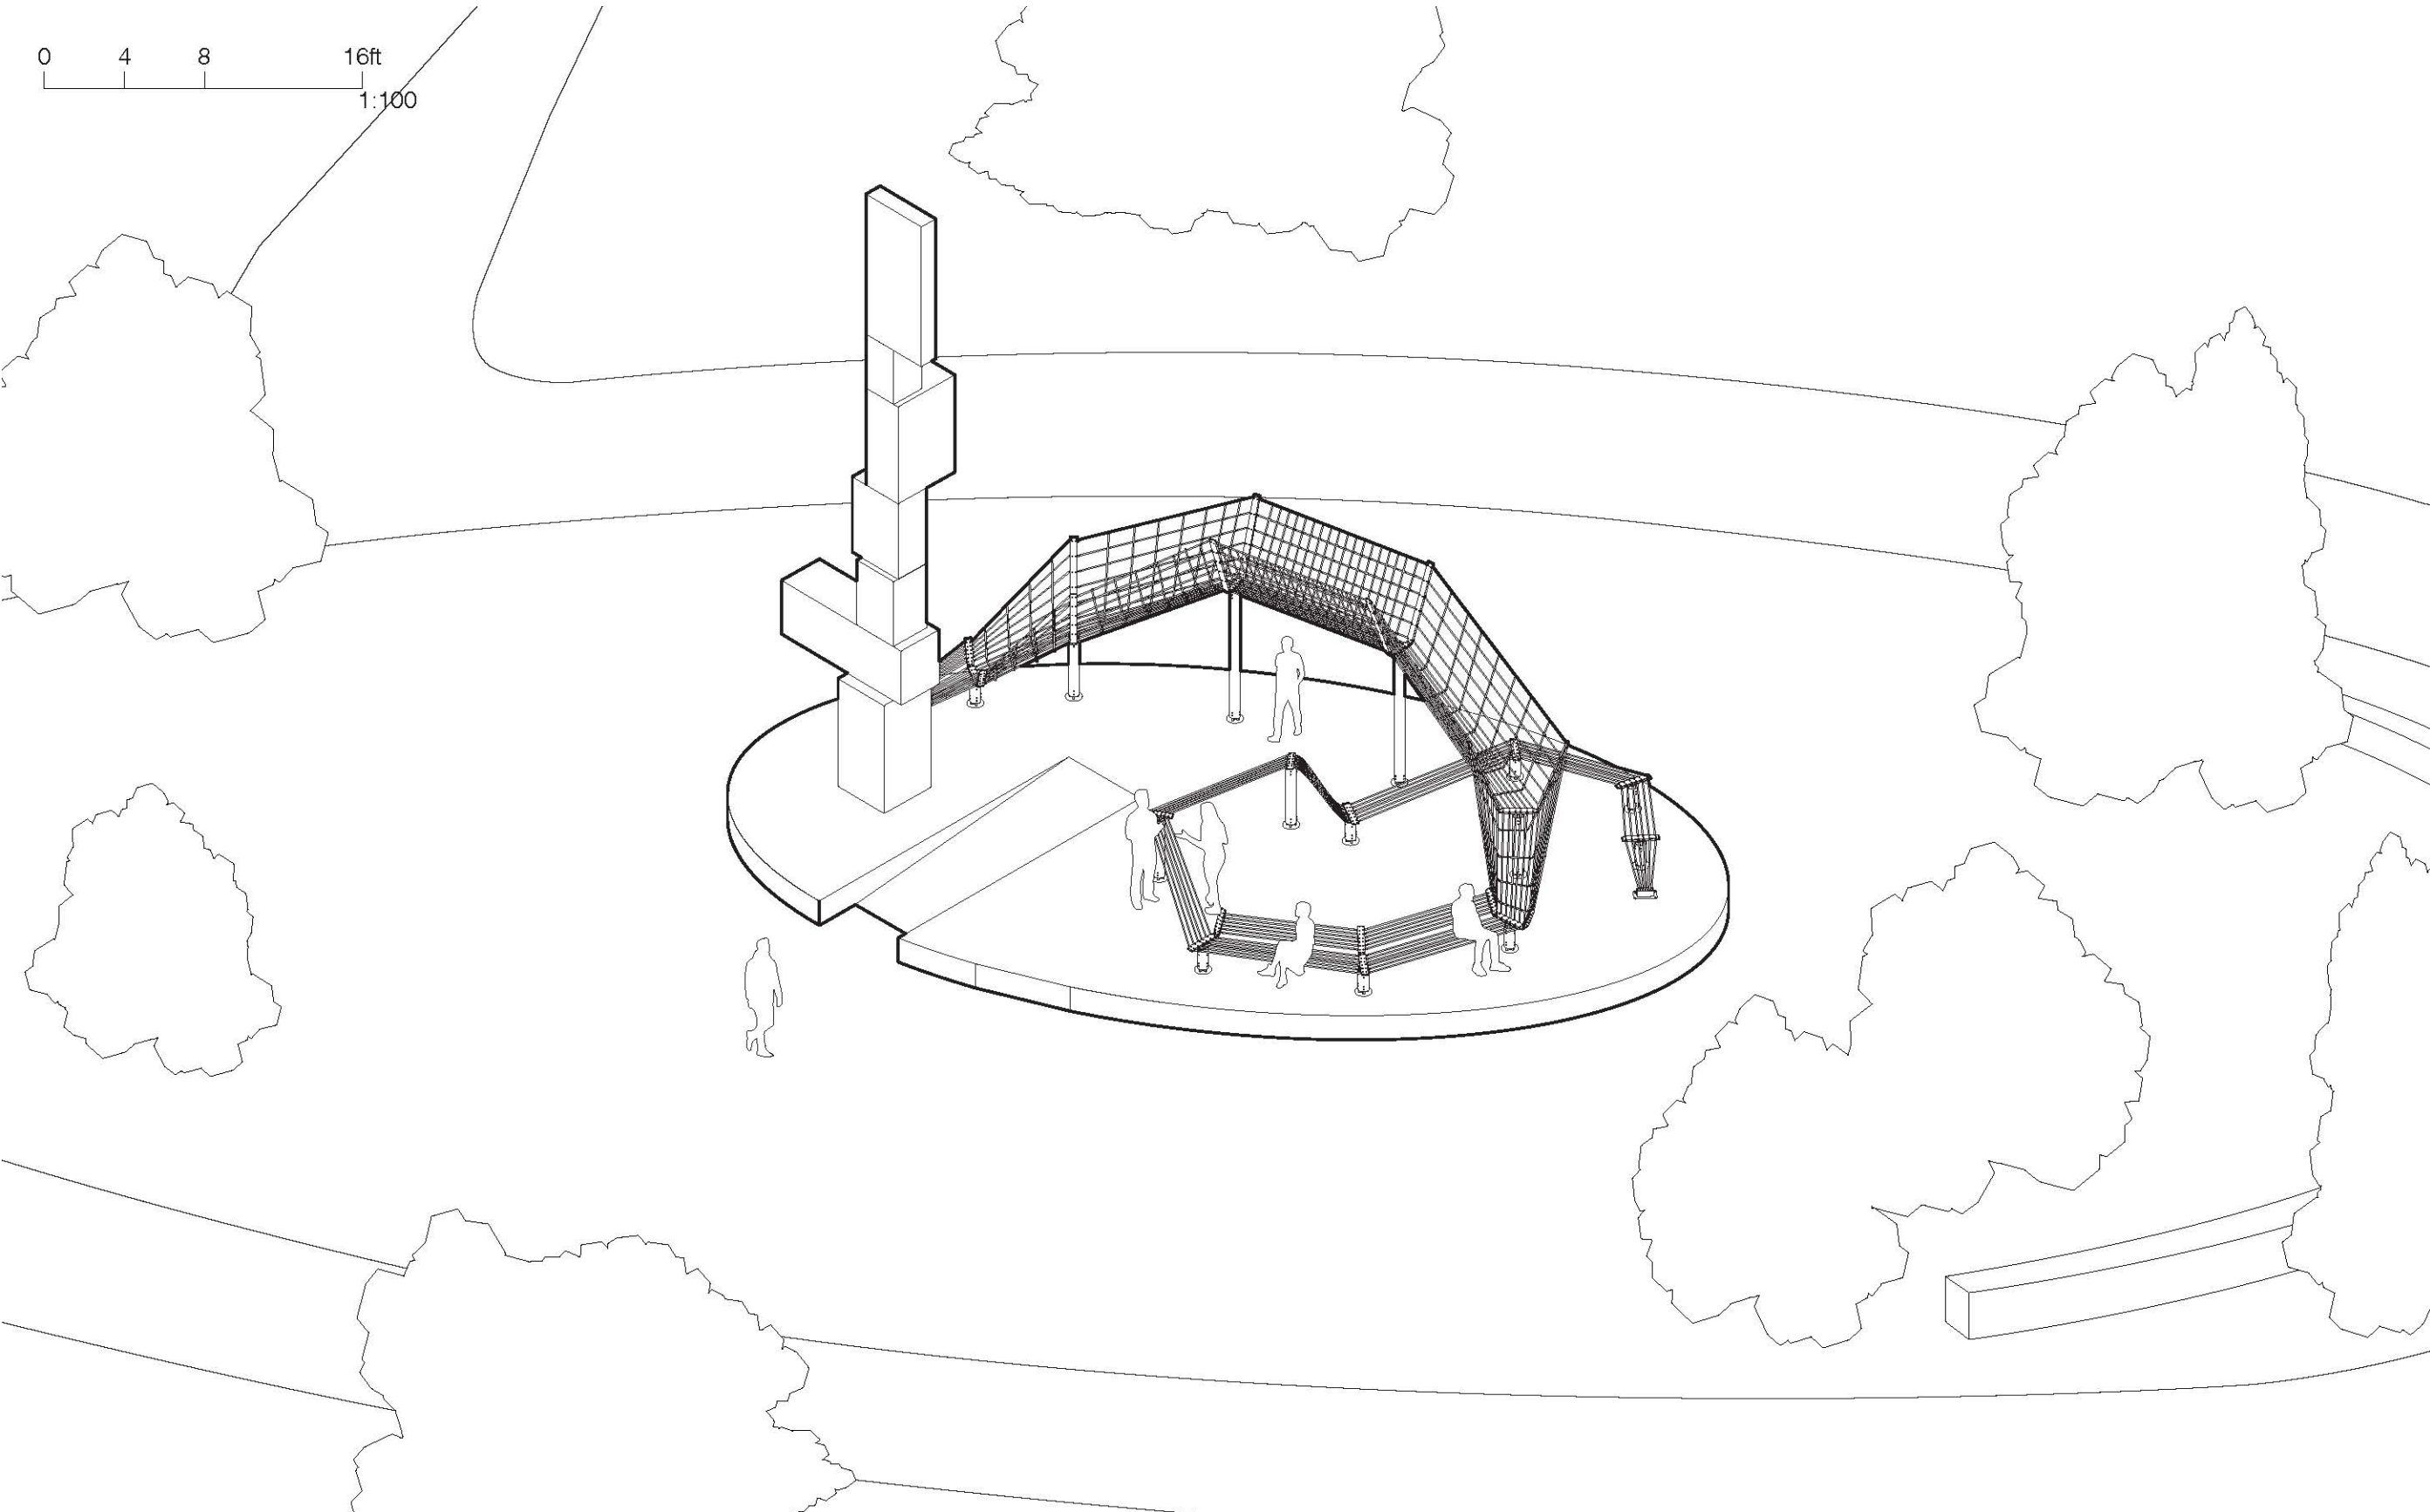

Everything we design is a response to the specific
climate and culture of a particular place.
