

PHT180 Grant Workshop: Writing Competitive NIH Proposals

JANUARY 29, 2026

NICOLE HALE

Agenda

- ❖ NIH overview and proposal preparation
- ❖ Panel discussion
- ❖ Q&A

NIH Overview

- ❖ 27 institutes and centers (ICs)

- Funding is made through ICs
 - Each has their own mission

- ❖ Use Matchmaker to determine which IC is the best fit for your research

- Enter your abstract to find similar funded projects
 - Can also see program officials (POs) within that IC

How to Find Funding Opportunities

- ❖ NIH no longer posts Notices of Funding Opportunities (NOFOs) in their Guide for Grants and Contracts
 - Notices are still posted there
- ❖ All NOFOs are posted on grants.gov
- ❖ NIH offers a search tool with NIH-specific filters to help find opportunities on grants.gov:
<https://grants.nih.gov/funding/explore-nih-opportunities>

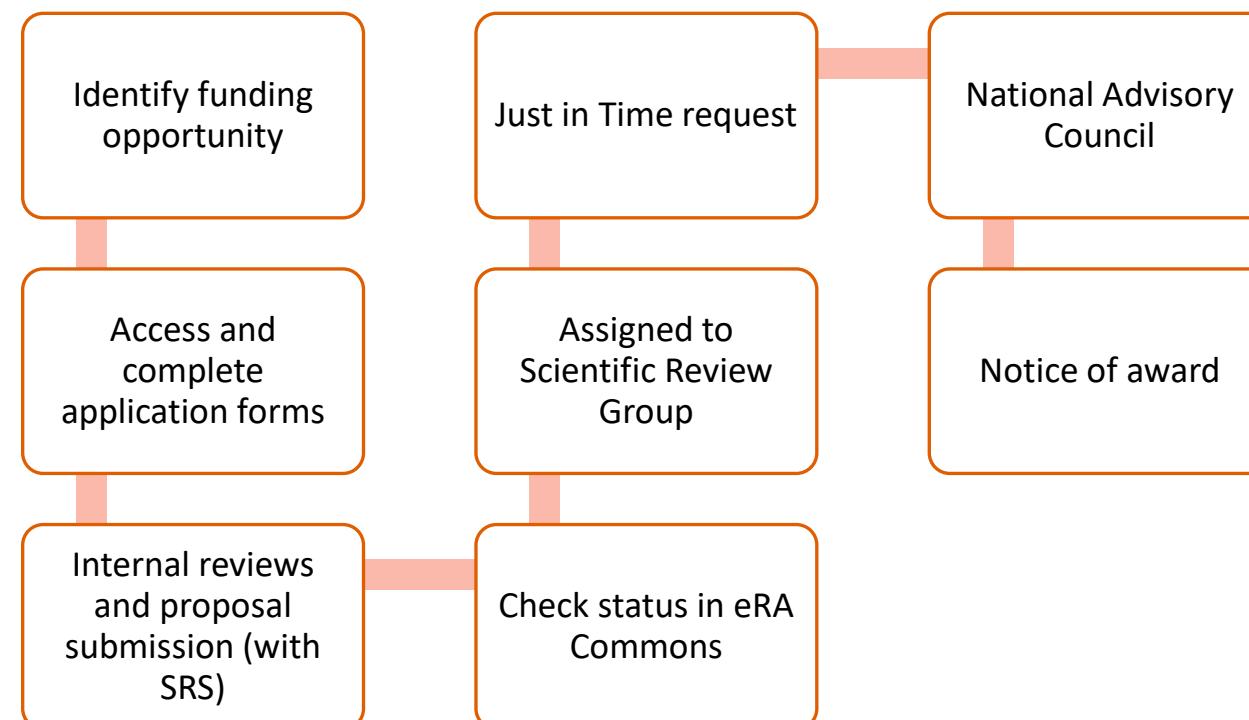

Early Stage Investigators (ESIs)

- ❖ Investigator within 10 years of final degree date (PhD or clinical training) that has not received a substantial NIH research award
- ❖ Advantages for R01 equivalent program
 - ESI applications are often prioritized for funding and may have different payline
 - Reviewed with other ESI applications
- ❖ Add date of terminal degree to your eRA Commons profile to see if you qualify as ESI

<https://grants.nih.gov/policy-and-compliance/policy-topics/early-stage-investigators>

Application Process

- ❖ Read the [How to Apply - Application Guide](#) for general application instructions
 - Check the NOFO and any related notices for program-specific instructions, these take precedence over the Application Guide!

Application Process

❖ Scientific Review Group

- Initial peer review
- Applicant receives numerical impact score within 2-3 days of the meeting
- Scientific Review Officer (SRO) prepares Summary Statement within 1 month of meeting

❖ Just in Time request

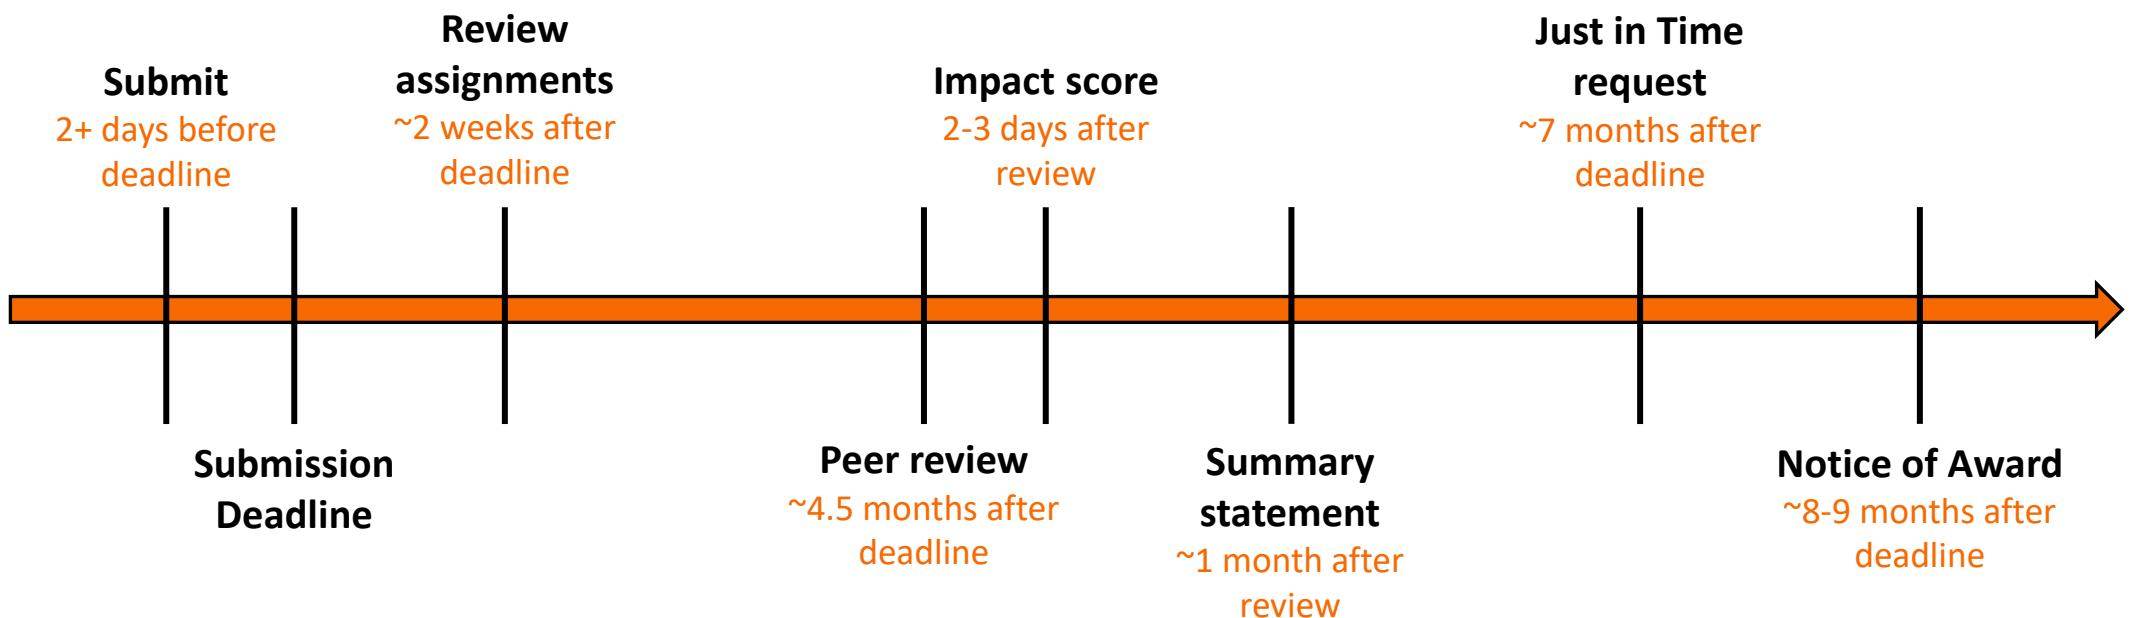

- May be asked for additional information if application is under consideration for funding
- Includes Other Support for senior/key personnel and additional documents for human subjects or live vertebrate animal research (if applicable)

❖ National Advisory Council

- Council recommends applications for funding
- IC director makes final funding decisions

Application Process

- ❖ Can take 9-12 months from submission to Notice of Award
- ❖ Plan ahead and submit early!

General Submission Tips

- ❖ Double check Related Notices section of NOFO before submission
- ❖ Talk to your PO!
 - Before submission to ensure your idea is a good fit for the opportunity and IC
 - After Summary Statement for clarification and advice on next steps if you didn't score well
 - For initial contact, email a summary of your research idea and include a specific funding opportunity and specific questions if you have them
- ❖ Share proposal with colleagues and mentors for feedback

General Proposal Writing Tips

- ❖ Have realistic and clear goals—be explicit and not overly ambitious
 - Proposed work needs to be plausible and feasible
- ❖ Be organized—make it easy for reviewers to follow
 - Have a structure with headings and paragraphs
 - Use white space
 - Guide with graphics and emphasis, but don't overdo it!
- ❖ Use clear, concise language—write for someone who is not an expert in your field
 - Share with peers, mentors, collaborators, and investigators at different levels
- ❖ Edit and proofread
- ❖ Reiterate important information throughout your proposal
- ❖ Read funded proposals

General Proposal Writing Tips

❖ Strong applications:

- Strong and clear significance
- High impact
- Relevance to health-related problems
- Well-qualified investigators
- Clear rationale
- Focused and organized with attention to detail

❖ Weak applications:

- Weak impact
- Overly ambitious
- Not innovative or only incremental progress
- Unclear hypothesis or rationale
- Flawed approach
- Proposal is messy or has a lot of typos

Simplified Peer Review Framework

- ❖ Reorganizes five review criteria into three factors
- ❖ Factor 1: Importance of the Research
 - Significance and Innovation
 - Scored 1-9
- ❖ Factor 2: Rigor and Feasibility
 - Approach
 - Scored 1-9
- ❖ Factor 3: Expertise and Resources
 - Investigator and Environment
 - Evaluated for sufficiency

<https://grants.nih.gov/policy-and-compliance/policy-topics/peer-review/simplifying-review/framework>

NIH Application Components

- ❖ Project Summary
- ❖ Project Narrative
- ❖ Specific Aims
- ❖ Research Strategy
- ❖ Budget
- ❖ Biographical Sketch
- ❖ Facilities & Other Resources
- ❖ Equipment
- ❖ Resource Sharing Plan
- ❖ Data Management and Sharing Plan
- ❖ Vertebrate Animals
- ❖ Select Agent Research
- ❖ Multiple PI Leadership Plan
- ❖ Consortium Arrangements
- ❖ Authentication of Biological and Chemical Resources
- ❖ Human Subjects and Clinical Trials forms

Project Summary

- ❖ Description of the proposed work that should be able to stand on its own
- ❖ Content
 - Broad, long-term objectives and specific aims of proposed work
 - Project's relation to health
 - Research design and methods
- ❖ Should be understandable to a scientifically literate reader
- ❖ 30 lines of text

Specific Aims

- ❖ Summary of your entire application
 - Explain your project direction and identify a well-defined health-related problem
 - Clear, concise summary of everything
- ❖ Want to grab reviewers' attention and sell them on your idea
 - Why is it important and exciting?
 - Why should they fund you?
- ❖ Focus on goals, anticipated outcomes, and overall impact
 - What do you want to do?
 - How will you do it?
 - What do you expect to find?
 - What are the short- and long-term impacts?
- ❖ Number of aims should be appropriate for the project duration—most often will have 3

Four Paragraph Structure

- ❖ Problem/Rationale
- ❖ Solution/Hypothesis
- ❖ Aims/Approach
- ❖ Expected Outcomes/Impact

Paragraph 1: Problem/Rationale

- ❖ Identify health-related problem with NIH/IC mission
 - Convey urgency and importance
 - Start with hook sentence to put reviewers in context and grab their attention

- ❖ Brief literature review
 - Introduce current knowledge and state of the field
 - Identify the knowledge gap that your project will fill

Paragraph 2: Solution/Hypothesis

- ❖ Outline your solution to the problem
 - Include your own preliminary data or recent work if you can
- ❖ State your hypothesis and overall goal
- ❖ Explain your rationale for the proposed project
 - Why is your project needed?
 - What will become possible with your results that is not possible now?

Paragraph 3: Aims

- ❖ Be realistic about your aims depending on project duration and budget
- ❖ Design aims with a clear, measurable endpoint
 - Avoid open-ended aims with language like study, explore, or investigate
 - Use verbs like determine or establish
- ❖ Have a focused, innovative approach—summarize your methods to accomplish your aims
- ❖ Aims should be logically related but not dependent on success of previous aims
- ❖ SMART method for writing aims
 - Specific, Measurable, Achievable, Realistic, Time-bound
 - Clearly explain what you will be doing, don't make the reviewers figure it out

Paragraph 4: Expected Outcomes/Impact

- ❖ Summarize overall impact of your project

- Clearly state your expected outcomes
 - Explain the impacts of those outcomes

- ❖ Be specific in your outcomes

- What will your specific project do for the field?

Research Strategy

- ❖ Expand on what is written in your aims page with more details
- ❖ Address the following:
 - Rationale
 - Experiments
 - Data analysis
 - Potential problems and alternative approaches
 - Expected outcomes
 - Timeline
 - Future directions

General Writing Tips

- ❖ Be clear and concise
- ❖ Make it easy for reviewers to read and follow
 - Labeled sections
 - Carefully write beginning of Research Strategy, and beginnings and ends of each section
- ❖ Write so non-experts can understand
- ❖ Ensure your overall idea is clear and easy to remember
 - Repeat in different ways
 - Be explicit
 - Use titles and emphasis to guide reviewers
- ❖ General structure is background, significance, innovation, approach
 - Approach is usually ~75% of total length

Research Strategy Sections

❖ Significance

- Why is your idea important?
- Highlight critical gaps that you will address

❖ Innovation

- Does your work improve an existing concept or method, or propose a new concept, method, or application?
- Demonstrate how your work will advance the field

❖ Approach

- How are you going to solve the problem?
- Include preliminary data if available
- Demonstrate that your project is feasible and explain the potential impact it will have

Significance

❖ Explain the problem

- Why is it important?
- What has been tried before?
- Why is it important to solve it now?

❖ Address these criteria:

- Importance—why does your work matter from a health perspective?
- Critical barriers—what has limited progress in this area?
- Prior research—what is lacking in previous work?
- Potential impact—how will your project advance the field?

Innovation

- ❖ Explain the solution

- What is different or novel in your work?
- Are you creating a completely new technique or technology? Are you combining existing techniques in new ways? Are you significantly improving on previous methods or technologies?

- ❖ Show comparisons between your idea and the standard techniques or concepts

- ❖ Use prior work to show feasibility and acceptability

- ❖ Mention alternative or validating techniques if needed

Common Problems

- ❖ Rationale is too vague
- ❖ Too many technical details without proper context
- ❖ Not identifying your own preliminary work in a clear fashion
- ❖ Not mentioning your own expertise or your collaborators
- ❖ Vague or far-reaching outcomes

Approach

- ❖ Play to your strengths
- ❖ Keep it interesting for your reviewers!

Option 1

- ❖ Overview and preliminary data
- ❖ Experiments and outcomes
 - Aim 1
 - Aim 2
 - Aim 3
- ❖ General methods
- ❖ Potential problems and alternatives
- ❖ Timeline and future directions

Option 2

- ❖ Overview
- ❖ Aim 1
 - Preliminary data
 - Experiments, methods, outcomes
 - Pitfalls and alternatives
- ❖ Aim 2
- ❖ Aim 3
- ❖ Timeline and future directions

Option 3

- ❖ Overview and preliminary data
- ❖ General methods
 - Aim 1 experiments
 - Aim 2 experiments
 - Aim 3 experiments
- ❖ Expected outcomes
- ❖ Potential problems and alternatives
- ❖ Timeline and future directions

Aims

❖ Why?

- Rationale and hypothesis
- Supporting data or literature

❖ How?

- Experimental design
- Data analysis and interpretation

❖ What?

- Expected outcomes
- Potential problems and alternative strategies

Preliminary Data

- ❖ Not always required but can still be helpful if you have it
- ❖ Make sure it is relevant to your proposed project and is of high quality
- ❖ Don't make reviewers look up references—if a piece of data is important then put it into your proposal and explain it!

Experimental Design

- ❖ Clearly describe what you are planning to do
- ❖ Give alternatives if experiments don't go as planned
- ❖ Establish your expertise and demonstrate that you are capable of completing the work
- ❖ Utilize the iceberg model
 - Can't include everything due to space constraints
 - Need to decide what is important and needs to be clearly stated
 - Show reviewers you've made a good faith effort and give them confidence in you
- ❖ Be concise while including enough detail so reviewers can understand

Expected Outcomes

- ❖ Explicitly state what you think will happen

- ❖ Discuss potential problems and give solutions
 - Show reviewers that you have fully thought out your project and are prepared for obstacles

 - Can also address issues of feasibility and confirm your team's ability to do the work

Timeline and Future Directions

- ❖ Include a simple figure or a couple sentences to show a brief timeline of your project
- ❖ Tell reviewers exactly what the impact of your project will be
 - Be specific—why are these outcomes interesting and important, and how will they make a difference?
- ❖ Discuss potential plans and next steps for after the proposed project

Budget

- ❖ Start early!
- ❖ Work with your SRS representative
- ❖ Budget should be necessary and reasonable
 - Don't want to significantly over- or underestimate
- ❖ Confirm the allowed budget limit in the NOFO

Biographical Sketch

- ❖ NIH has adopted the Common Forms for the biosketch
 - NOT-OD-26-018: <https://grants.nih.gov/grants/guide/notice-files/NOT-OD-26-018.html>
 - Webinar from SuRE Resource Center: <https://www.youtube.com/watch?v=vbKCRKxdmkY>
- ❖ All biosketches must be created using [SciENcv](#)
- ❖ Need to link ORCID iD to eRA Commons account (in Personal Profile section)
- ❖ Included information is similar to previous format, but in two different parts
 - Common Form: identical across all agencies
 - Supplement Form: specific to NIH

Biosketch Sections – Common Form

❖ Appointments/Positions

- System will automatically place them in reverse chronological order
- Maximum of 15 entries
- Identify foreign and domestic appointments/positions outside of primary organization for a period of 3 years from submission date

❖ Products

- Up to 5 products closely related to proposed project
- Up to 5 other significant products that highlight contributions to science
- All products must be citable

Biosketch Sections – NIH Supplement

❖ Personal Statement

- Can provide narrative on Products Most Closely Related to Proposed Project (cited in Common Form)
- No citations allowed
- Can still include ongoing and recent research projects

❖ Honors

- Maximum 15 entries

❖ Contributions to Science

- Provide up to 5 narrative contributions to science
- No citations allowed
- Can refer to Other Significant Products (cited in Common Form)

Summary of Changes

- ❖ Must use SciENcv to complete biosketch and link ORCID iD
- ❖ Common Form and NIH Supplement Form
- ❖ Citations can be selected from MyBib and ORCID and will be correctly formatted
 - ORCID iD is linked at the top of the biosketch, MyBib link should no longer be included
- ❖ No page limits, but rather character limits within sections
- ❖ Delegates can assist with entering information in SciENcv
- ❖ Investigators must certify their own forms in SciENcv

Resource Sharing Plan

- ❖ Describe plans for sharing model organisms and research tools (if applicable)
- ❖ Templates available on PHT180 Grant Writing Resources page
- ❖ Use the NIH decision tool to see what applies to your research:

<https://grants.nih.gov/policy-and-compliance/policy-topics/sharing-policies/which-policies-apply-to-my-research>

Data Management and Sharing Plan

- ❖ Use the [DMS Plan format page](#) from NIH

- ❖ Data Management and Sharing Justification (within Budget Justification)
 - Estimate cost of proposed DMS activities (use DMS Effort Calculator from SRS)
 - Summary of amount and type of data to be preserved and shared, and repositories that will be used
 - Include general categories with dollar amount and explanation for each

Human Subjects and Clinical Trials

- ❖ NIH Decision Tools to determine if you are doing [Human Subjects Research/Clinical Trials](#):
- ❖ Depending on your project, you may have to include the following information:
 - Study record form
 - Inclusion of individuals across the lifespan
 - Inclusion of women and minorities
 - Recruitment and retention plan
 - Study timeline
 - Protection of human subjects
 - Data and safety monitoring plan
 - Overall structure of the study team
 - Statistical design and power

Resources

- ❖ [NIH Institutes and Centers](#)
- ❖ [Matchmaker](#)
- ❖ [NIH Guide for Grants and Contracts](#)
- ❖ [Grants.gov Funding Opportunity Search](#)

- ❖ [SuRE Resource Center](#)
- ❖ [NIH Sample Applications](#)

Agenda

- ❖ NIH overview and proposal preparation
- ❖ Panel discussion
- ❖ Q&A

Meet the Panelists

Linwei Wang

Bruce B Bates Professor
Department of Computing
and Information Sciences PhD

Tom Gaborski

Department Head
Department of Biomedical
Engineering

Zhiqiang Tao

Assistant Professor
School of Information

Terry Koo

Assistant Director, Proposal
Development
Sponsored Research Services
