Access Technologies
Creating products and services that provide access to individuals with physical and developmental disabilities.

Team 3: Help Dress

Technology to help someone dress has not been advanced since the shoe horn or dressing hook. For members of our community with disabilities or those that are recovering from an injury, getting dressed can be a daunting task.

Challenge:
Develop an apparatus to help someone get dressed independently.

Objectives:
• Independence
• Safety
• Customizable (Color, Material, Size)
• Easy to use
• Light weight
• Affordable
• Environmentally friendly
• Durable
• Standard parts
