Access Technologies
Creating products and services that provide access to individuals with physical and developmental disabilities.

Team 4a: **Float Safe (Flutter Float)**

A device to suspend someone vertically in the water with their head and trachea feeding tube safely above and out of the water, while at the same time allowing their hands to still interact with the water, thus allowing the user to move independently in water which they would not have been able to do otherwise.

**Challenge:**
There is no effective and safe device for people with trachea tube and stability needs.

**Objectives:**
- Freedom of movement
- Safety
- Stability
- Vertical (and adjustable) positioning
- Trachea protection

**Concept development**
