About me.

- BS-Electrical Engineering, University of Delaware
- MS-Elec. Comp. Engineering, Carnegie Mellon University
- Ph.D., Imaging Science, RIT

- **Licensed Magician**
- Gardener
- Wood working
- Ceramicist / Potter
- Trained Suicide Helpline Staff
- Director of the Computer Petting Zoo

Copyright 2023, Thomas Kinsman, Ph.D.

2

2

Important:

- I wrote the first digital image file format converter for Eastman Kodak Company.
- TIFF – Tag Image File Format.
- I wrote the first JPEG files that were JPEG compliant.

- I have been doing computer graphics since 1972.

- The “Personal Computer” did not happen until ~1983. (Apple IIe)

Copyright 2023, Thomas Kinsman, Ph.D.

3

3

The Problem For Today:

At RIT, does not have
a graphics Arts department.

Copyright 2023, Thomas Kinsman, Ph.D.

4

4

Possible Solutions:

- Skip it.
- When you get a grant,
include money for a graphic artist.
- Do it yourself

Copyright 2023, Thomas Kinsman, Ph.D.

5

5

Why: Integrating artwork leads to:

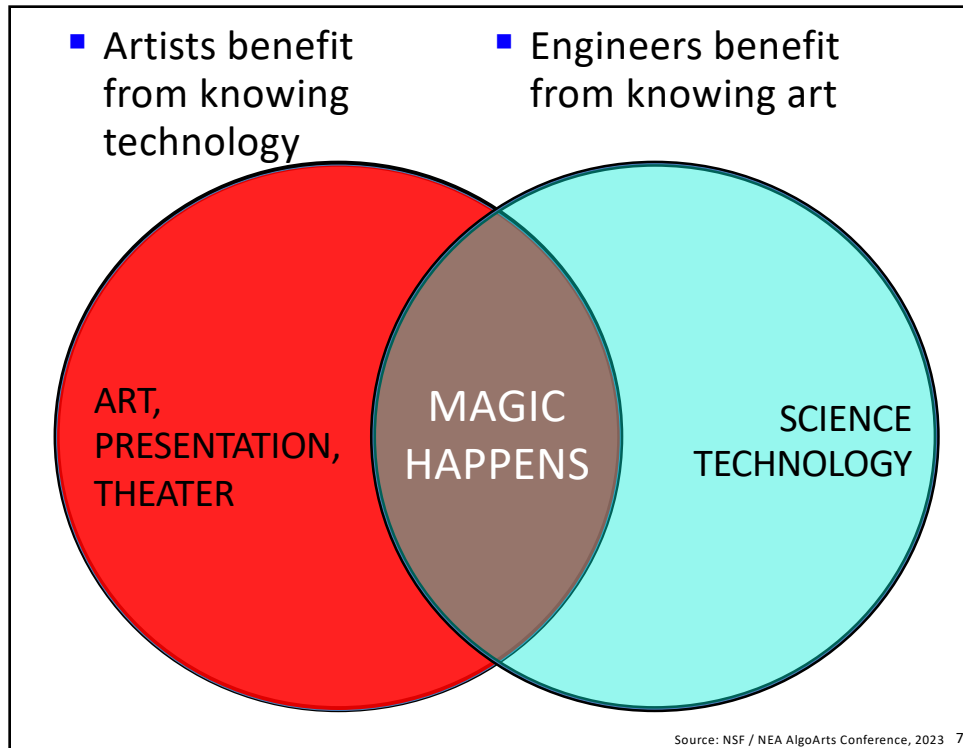

1. Increased critical thinking abilities
2. Higher-order comprehension and deeper learning
3. Increased content mastery
4. Problem solving skills
5. Teamwork and communication skills
6. Improved visuospatial reasoning
7. General engagement and enjoyment of learning

Source: NSF / NEA AlgoArts Conference, Monday May 15th-16th, 2023

8. It saves tons of time.

6

6

7

Considerations - Psychology:

- What is the audience?
- What *insights* do you want to share?
- Are there viewing constraints?
 - Font Size
 - Projector Size?
 - Is there light outside?
 - What will the contrast on the screen be like?
- What *story* are you trying to share?

Copyright 2023, Thomas Kinsman, Ph.D.

8

8

Stories

- A. When we tell a story, we are *storing information* in another person, outside of yourself
- B. You might be extremely creative
- C. That other person might remember the information better than you can
- D. Use *collective knowledge*

Copyright 2023, Thomas Kinsman, Ph.D.

9

9

Considerations – Technicality:

- What are you doing? Presentation? Paper?
- What technologies do you need?
 - 2D?
 - 3D?
 - Video?
 - Interactive?
 - Audience participation?

Copyright 2023, Thomas Kinsman, Ph.D.

10

10

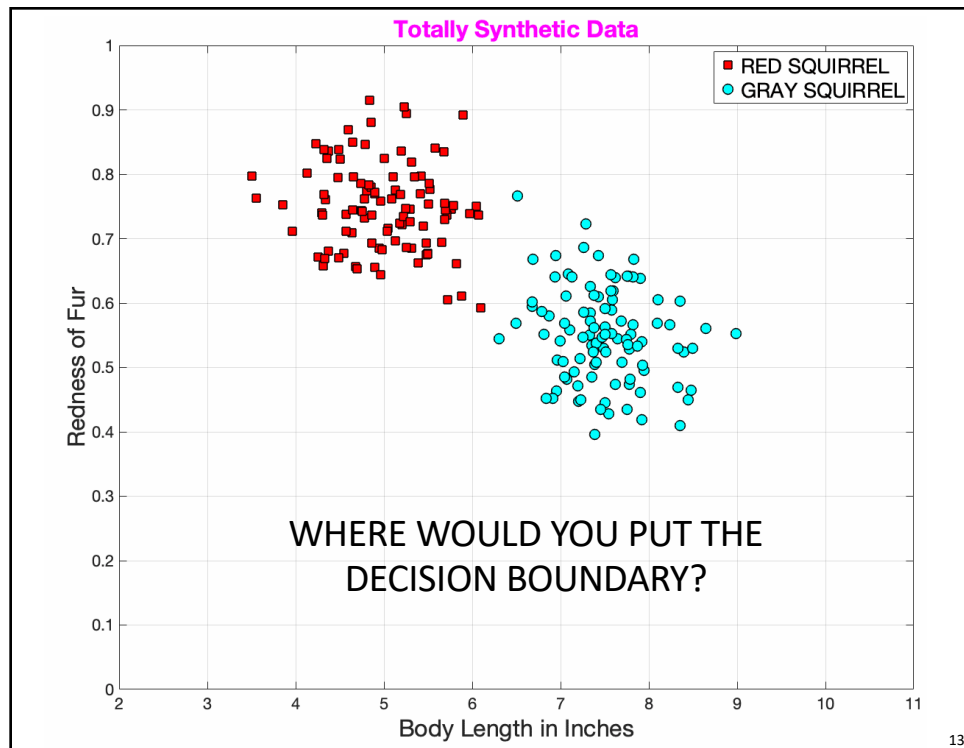

Phases

- A. How much time do you have?
- B. Ideation and Storyboarding
- C. Managing cognitive load
- D. Considerations for colorblind students
- E. Software options
- F. Development
- G. Deployment
- H. Testing and refinement

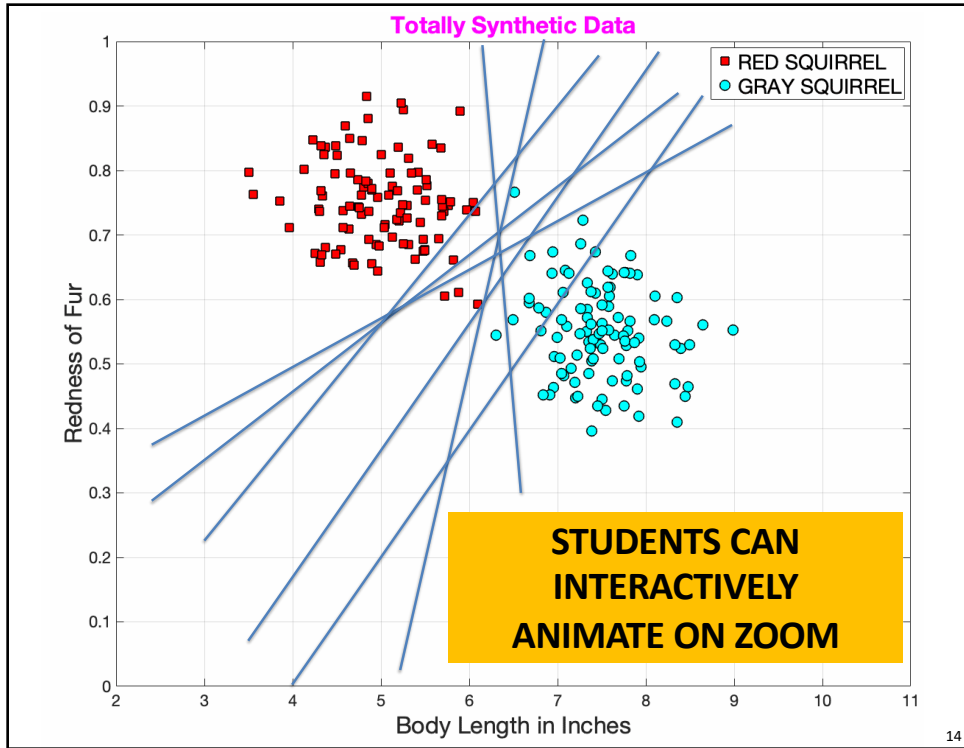

Copyright 2023, Thomas Kinsman, Ph.D.

11

11

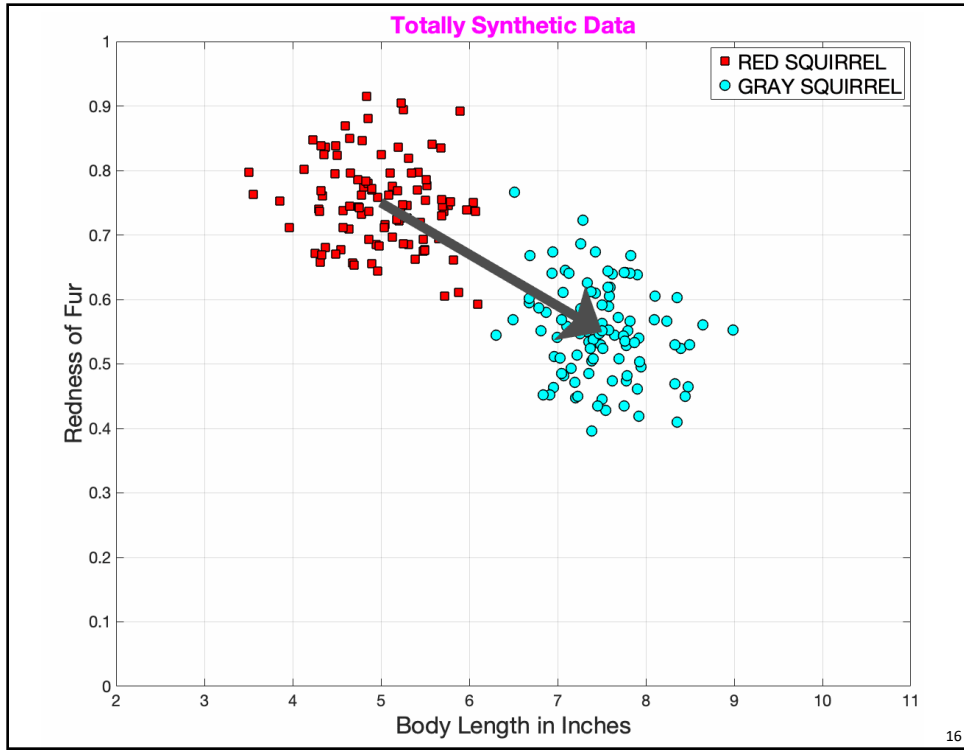

13

14

19

20

Use Native Support if Possible:

In PowerPoint I can use simple circles that are stretched and rotated to form ellipses:

Copyright 2023, Thomas Kinsman, Ph.D.

21

21

Color Blind Solutions

- At RIT,
 - 1/13 of males are colorblind.
 - 1/169 females are colorblind.
 - More colorblind than deaf.
- Avoid Green, Red, Pink.
- Use Black on White:
- Use Brownish-Red, and Blue.
- **YELLOW** is a highlight color.
- Use contour plots.

Copyright 2023, Thomas Kinsman, Ph.D.

22

22

23

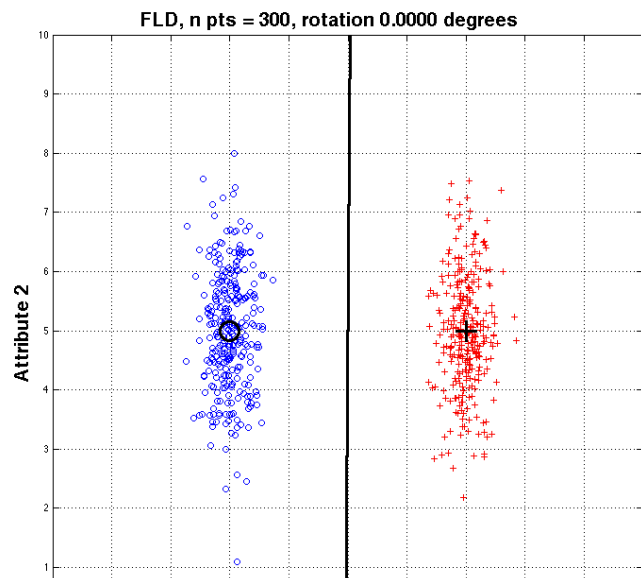

Demonstrating an Animation

- The following figures were generated using a package, one frame at a time.
- Development:
Get things working for one frame,
then run it for many frames.

Copyright 2023, Thomas Kinsman, Ph.D.

24

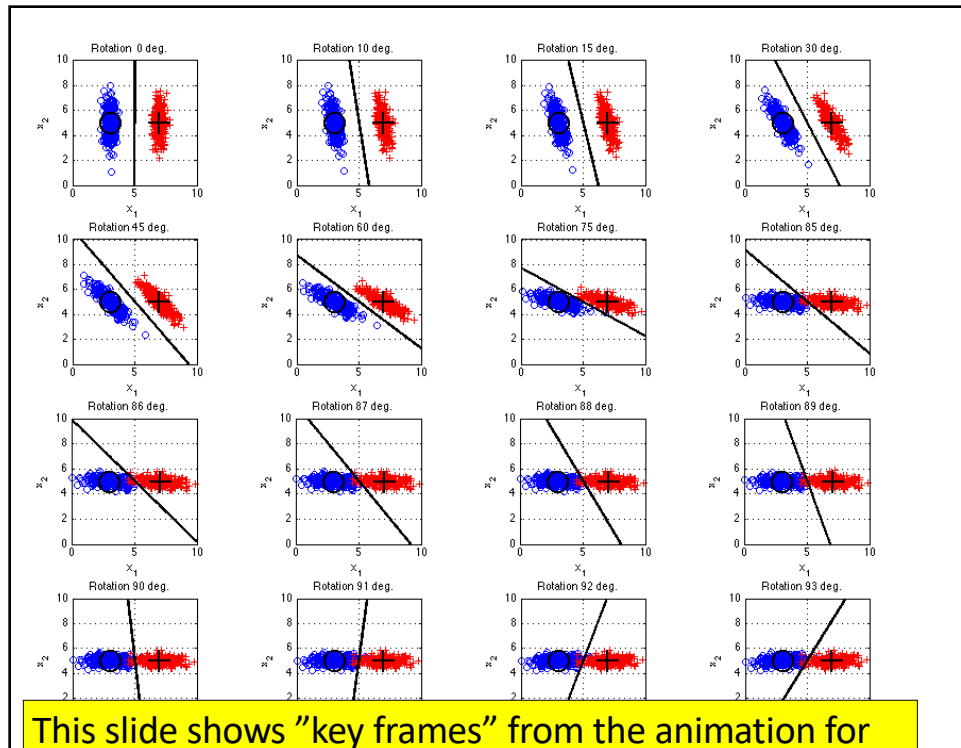

24

PROBLEM: 2D animations are not seen by students who only look at the PDF's.

Copyright 2023, Thomas Kinsman, Ph.D.

25

26

Status Check!

- What fraction of the information in a lecture will students retain, just by watching the lecture?
- About five percent is the number thrown around.
- Yet, students have what I term, *"the illusion of understanding."*

Copyright 2023, Thomas Kinsman, Ph.D.

27

27

Development Steps:

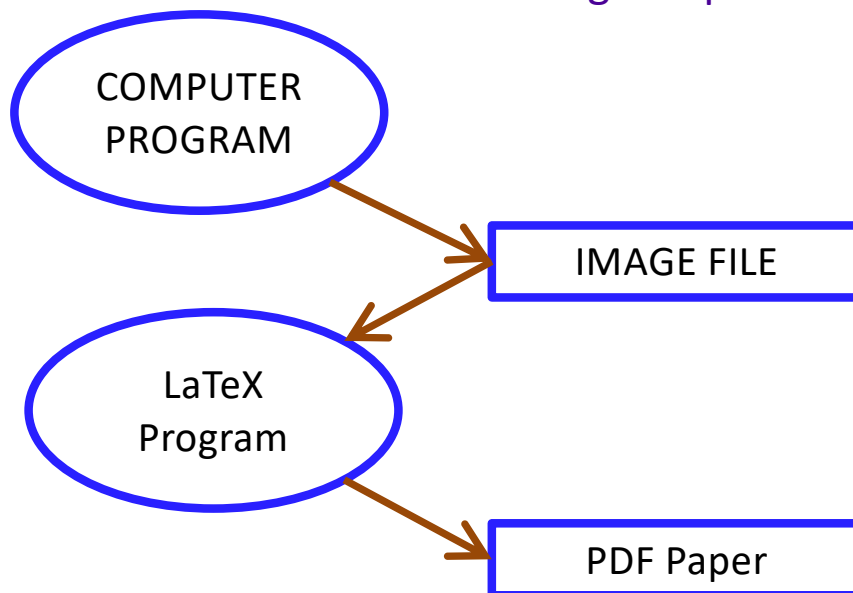

1. I am going to write a program.
2. The program creates a graphics file:
 - a diagram
 - a figure
 - an image. (all the same thing.)
3. The file is pulled straight into my LaTeX paper.

Copyright 2023, Thomas Kinsman, Ph.D.

28

28

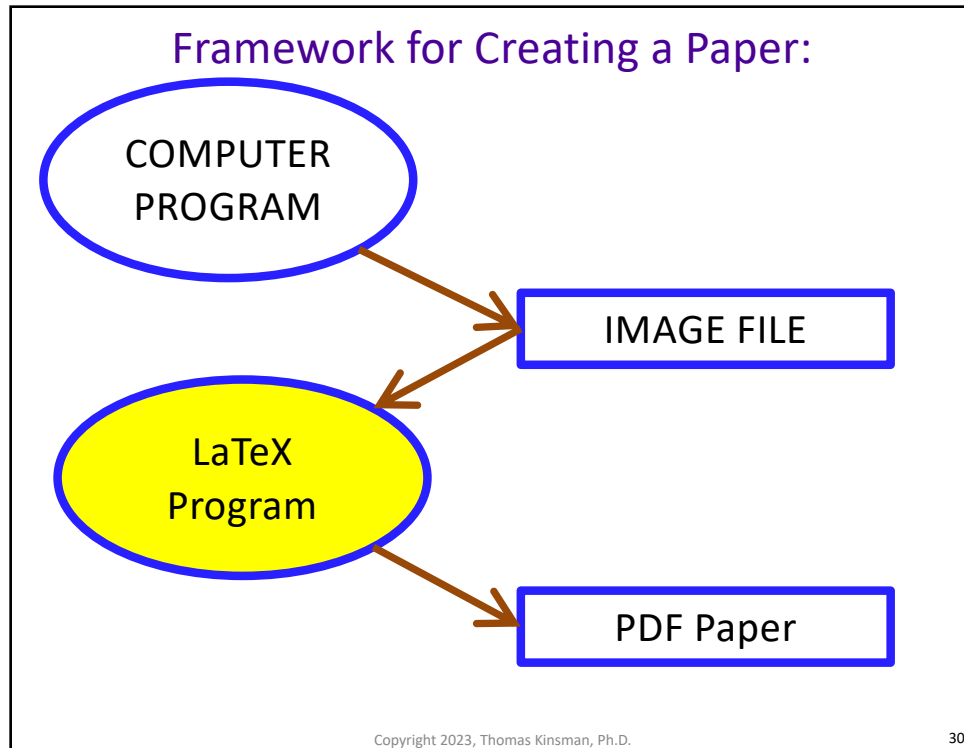

Framework for Creating a Paper:

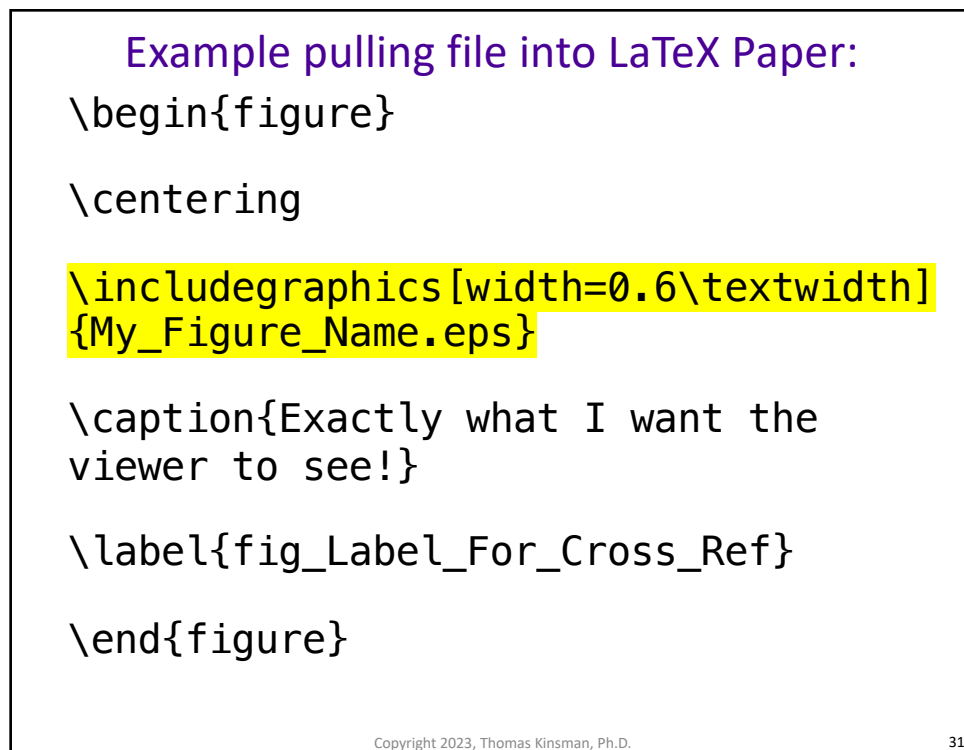

Copyright 2023, Thomas Kinsman, Ph.D.

29

29

30

31

So What?

- If I am creating a power point, I can drag-and-drop the figure directly into my presentation.

- Now you know why I bother.

Copyright 2023, Thomas Kinsman, Ph.D.

32

32

Part II

Programming Discussion

Thomas B. Kinsman, Ph.D.

Copyright 2023, Thomas Kinsman, Ph.D.

33

33

Find a working example:

- Look through your resources
- Find an example that is as close to what you want to do as possible
- Start with that

Copyright 2023, Thomas Kinsman, Ph.D.

34

34

All Programs Have a Core Method:

- `plot(x_locations, y_locations)`
- or ---
- `plot3(x_locations, y_locations, z_locations)`

Copyright 2023, Thomas Kinsman, Ph.D.

35

35

Possible Programming Languages

- Excel
- Power-VI
- Matlab
- python
- Sketch
- Mathematica
- Many others
- For native to LaTeX:
 - ticz
 - asymptote - for interactive 3D drawings

Copyright 2023, Thomas Kinsman, Ph.D.

36

36

Possible Image File Formats:

- TIFF Tag Image File Format
- JPEG Joint Photographic Experts Group
- PNG Portable Network Graphics
- GIF CompuServe Image Format
- SVG Scalable Vector Graphics
- PS PostScript
- EPS Encapsulated PostScript

- Many others

Copyright 2023, Thomas Kinsman, Ph.D.

37

37

Two Programming Paradigms:

- A. Using the current pen color and the current attributes.
 - Everything about the line is defined ahead of time: width, color, style.
 - Everything must be defined ahead.

- B. Describe the current pen color for every single line.
 - All attributes are defined every single time you create a line

Copyright 2023, Thomas Kinsman, Ph.D.

38

38

Two Programming Paradigms:

- A. Using the current pen color and the current attributes.
 - Everything about the line is defined ahead of time: width, color, style.
 - Everything must be defined ahead.

- B. Describe the current pen color for every single line.**
 - **All attributes are defined every single time you create a line**

Copyright 2023, Thomas Kinsman, Ph.D.

39

39

Possible Drawing Coordinates:

- **Absolute:**
 - I first define a coordinate system, and then tell you were to put the lines in it.

- **Relative:**
 - Wherever the “current pen position” is, draw the diagram or line with respect to the last thing drawn.

Copyright 2023, Thomas Kinsman, Ph.D.

40

40

Possible Drawing Coordinates:

- **Absolute:**
 - **I first define a coordinate system, and then tell you were to put the lines in it.**

- **Relative:**
 - Wherever the “current pen position” is, draw the diagram or line with respect to the last thing drawn.

Copyright 2023, Thomas Kinsman, Ph.D.

41

41

Matlab Example:

- Uses absolute coordinates:
- User Red-Green-Blue color specifications.
- Includes graphic display.

Copyright 2023, Thomas Kinsman, Ph.D.

42

42

Strategy to Install Matlab:

- At RIT Google for
Software for Personal Computers
site:rit.edu
- Follow the procedure

***A strategy is different
than a procedure.***

Copyright 2023, Thomas Kinsman, Ph.D.

43

43

```

function Gen_1D_Vanilla_Plot_v01( )
    % Step 1: Create a Figure:
    figure( 'Position', [10 10 1024 350 ]);

    % Step 2: Get or Create your Data:
    xs = -10 : 0.1 : 10;          % for x = minus 10 to 10
    ys = gaussian_tbk( 0, 1, xs); % some function

    % Step 3: Plot on the figure:
    plot(xs, ys, 'LineWidth', 5);

    % Step 4: Decorate the figure:
    ylabel('Probability', 'FontSize', 20);
    title('Gaussian Probability Distribution', ...
          'FontSize', 24);

    % Step 5: Save the Figure:
    print('-deps', 'Fig_Gauss_Distribription.eps' );
end

```

45

45

46

Active Learning:

**HAVE STUDENTS
SKETCH THE
GRAPHS BY HAND!**

Copyright 2023, Thomas Kinsman, Ph.D.

47

47

Pizza

Thomas B. Kinsman

48

Everyone Likes Pizza

- Pizza is the perfect combination of:
 - Salt
 - Fat
 - Sugars

- It is the “triple point” for food science.

5/17/23

Copyright 2021, T. Kinsman

49

49

50

Getting Rich on Pizza

- We are going to use Data Science to make perfect pizza.
- In my kitchen, I can make 10 different pizzas a week and sample them.
- I will make them with 10 different amounts of cheese.
- So, cheese is one dimension, or attribute:

5/17/23

51

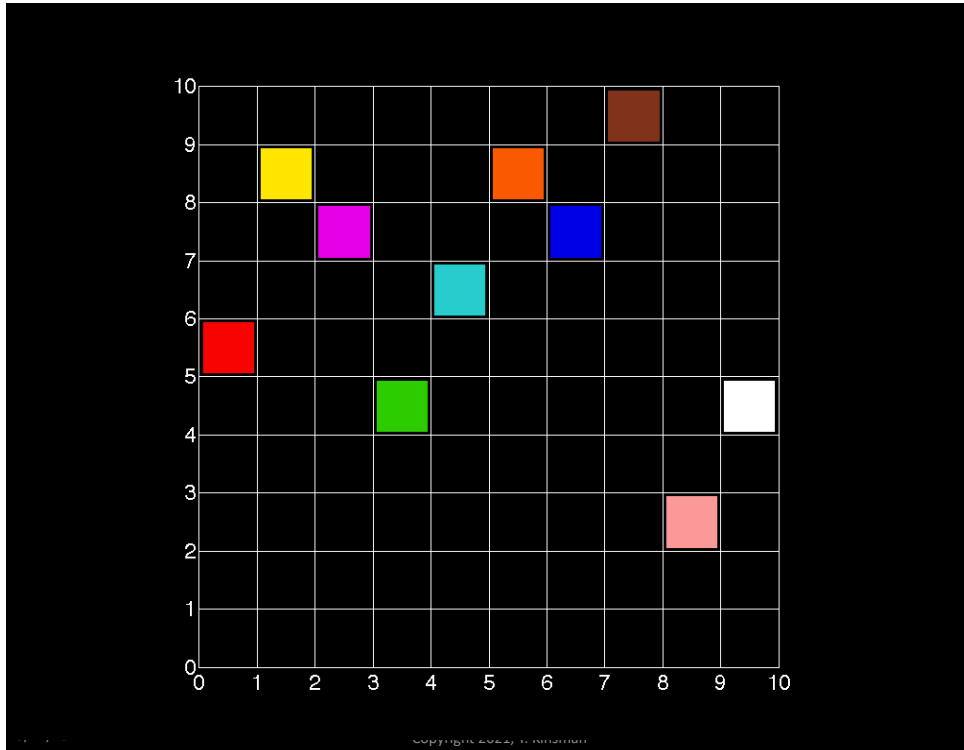

51

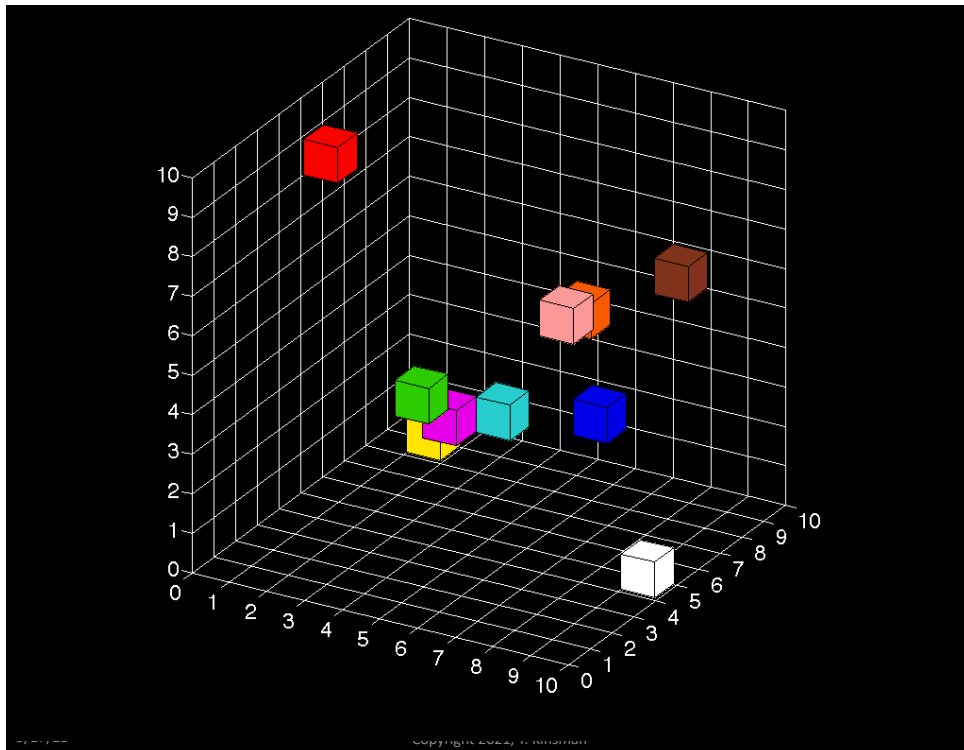

52

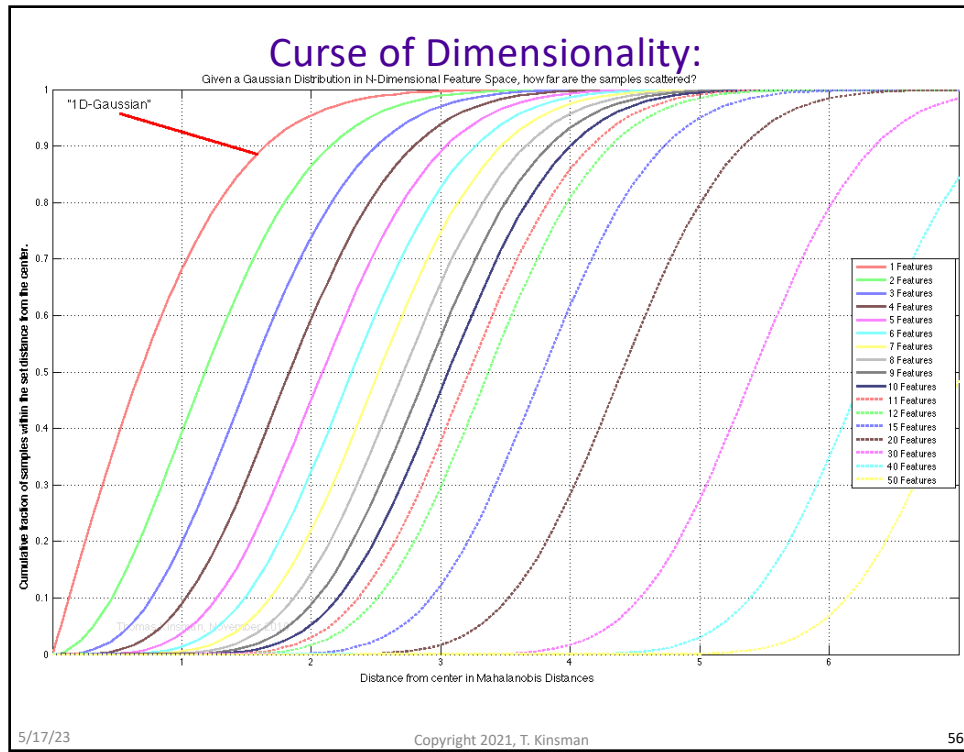

53

54

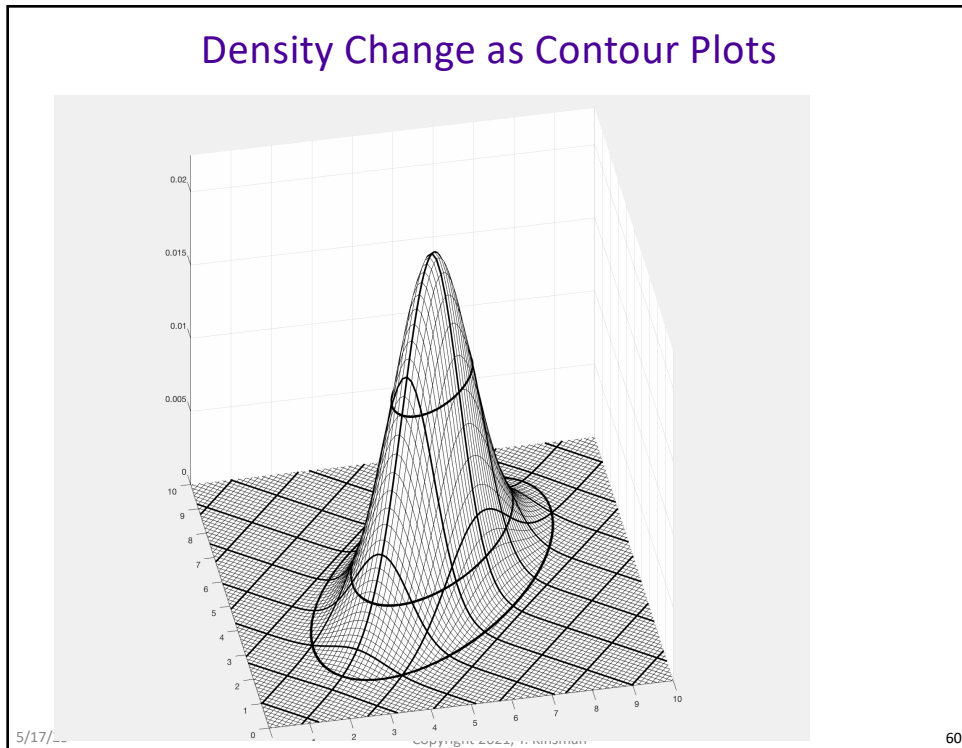

55

56

57

Caution:

- Students and Readers won't know the difference.
They assume the world happens for them.
- Do not kill yourself for RIT.
The extreme measures will not be rewarded...
- Unless you *point out* to them
that they are seeing something not in the book.

Copyright 2023, Thomas Kinsman, Ph.D.

61

61

Closing

- No one cannot remember what was on the
last slide. Manage attention.
- Have students sketch graphs and
relationships.
- There are many plotting routines to use,
they are all very similar.
- It is best to get good at one for a start.
Then you can dabble in others.
