NTID gets \$1.26 million from Nippon Foundation

Program works to improve education, careers for deaf students

The Nippon Foundation of Japan has awarded the Postsecondary Education Network-International, a grant program housed at NTID, \$1.26 million to steward a worldwide network to improve education and career opportunities for deaf men and women. To date, The Nippon Foundation has awarded PEN-International more than \$4.5 million.

Deaf college students in Japan, China, Russia, the Czech Republic, Thailand and the Philippines will continue to benefit from PEN-International's expertise through improved curriculum, increased access, new technology, multi-media labs, and trained faculty members.

"Perhaps our most important achievement is the growing number of faculty members who are successfully sharing their newly developed expertise within their respective countries," says James DeCaro, director of PEN-International.

DeCaro says significant inroads have been made with associates at Tianjin University of Technology in China, De La Salle University-College of St. Benilde in Philippines, and Bauman Moscow State Technical University in Russia, who have added more than 20 additional institutions to the network.

"This is the ripple effect for which we have been striving," DeCaro adds.

PEN-International is a multilateral international effort to network colleges and universities that educate people who are deaf.

For more information about PEN-International and its global partners visit www.pen.ntid.rit.edu.

RIT's leadership in the research and development of alternative energy sources is taking a significant step forward. The U.S. Department of Energy is committing its support to the creation of a hydrogen-technol-

ogy learning center at RIT's Center

for Integrated Manufacturing Studies.

The goal of a hydrogen-technology learning center is to educate students, potential end users, elected leaders and the public about the vision of a fuel cell economy. Areas of research include hydrogen applications, its safe use as an energy carrier and other related challenges.

CIMS will be one of four learning center sites established through \$750,000 in Department of Energy funding. Two centers will be in
